Berkley Water Transportation Pier Ferry Project Draft EIR Appendices (1 of 2)

Appendix A

Notice of Preparation (NOP) and NOP Comments

Parks, Recreation, and Waterfront Department

NOTICE OF PREPARATION AND SCOPING MEETING ENVIRONMENTAL IMPACT REPORT FOR THE BERKELEY WATER TRANSPORTATION PIER FERRY

DATE: April 18, 2025

TO: Responsible and Trustee Agencies and Other Interested Parties

FROM: City of Berkeley
Parks, Recreation, and Waterfront Department
2180 Milvia Street, 3rd Floor
Berkeley, California 94704

SUBJECT: **Notice of Preparation of an Environmental Impact Report as well as Notice of EIR Scoping Meeting on Monday, May 5, 2025**

PROJECT NAME: **Berkeley Water Transportation Pier Ferry**

PROJECT SPONSOR: City of Berkeley

Notice is hereby given that the City of Berkeley is preparing an Environmental Impact Report (EIR) for the proposed Berkeley Water Transportation Pier Ferry ("project") and is requesting public comments on the scope of the Draft EIR. The EIR is being prepared by the City of Berkeley, the lead agency for the project, in accordance with the California Environmental Quality Act (CEQA) to identify, evaluate, and disclose possible environmental impacts and develop strategies to avoid, reduce, or compensate for potentially significant impacts that would arise from the implementation of the proposed project.

The San Francisco Bay Area Water Emergency Transportation Authority (WETA) would operate the passenger ferry service associated with this project and is considered a Responsible Agency under CEQA.

In accordance with CEQA Guidelines Section 15082, this Notice of Preparation (NOP) is being sent to the California State Clearinghouse, Alameda County Clerk, responsible agencies, trustee agencies, adjacent cities, and members of the public including individuals and organizations in order to solicit comments on the scope and content of the analysis in the EIR.

PROJECT OBJECTIVES: The proposed project objectives include the following:

- Enhance public access and recreational opportunities at the Berkeley Waterfront that:
  - Develop or enhance public pier facilities at the City of Berkeley Waterfront.
  - Provide sufficient public access and recreational opportunities at the

Berkeley Waterfront that meet regional needs, consistent with BCDC Bay Plan Policies maximizing access to the Bay.
    - Minimize environmental impacts by considering existing infrastructure and sea level rise projections.
    - Encourage the use of public transit, bicycle, and other forms of active transportation and sustainable travel to access the site.
- Provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco that:
    - Improve regional connectivity and resiliency with enhanced public transportation choices for East Bay residents, including for accessing jobs in San Francisco and other locations along the Bay for commerce and recreational purposes, and to address existing deficiencies in the Transbay transportation network.
    - Reduce the use of single-occupancy vehicles for Transbay trips, thereby reducing greenhouse gas and air quality emissions and decreasing congestion on the regional roadway system, consistent with regional and Statewide goals.
    - Provide travel times and costs that are competitive with other Transbay modes of travel.
    - Provide public transit facilities that are compatible with operations and recreational activities at the Berkeley Waterfront.
    - Provide navigable conditions for safe and efficient operation of ferry vessels.
    - Provide options for emergency response and transportation services in case of an emergency, such as natural or human-caused event that disables roads, other transit, bridges, and/or tunnels.

PROJECT LOCATION: The project site is located at the Berkeley Waterfront along the San Francisco Bay in the City of Berkeley, Alameda County. As shown in Figure 1, the project site specifically encompasses the closed Berkeley Pier, including the entry area for the Berkeley Pier; the San Francisco Bay waters around the closed Berkeley Pier; the parking lot off Seawall Drive; roadways (University Avenue and Seawall Drive); and vegetated street islands adjacent to University Avenue and Seawall Drive.

PROJECT DESCRIPTION: The Berkeley Pier was closed in July 2015 due to visually observed structural problems on the underside of the concrete decking and pilings. The proposed project aims to revitalize the Berkeley Waterfront by developing a new dual-purpose pier and ancillary uses that support both public recreation and zero-emission public ferry service. Specifically, the project would include the following components:

- Demolish portions of the closed pier;
- Construct a new 1,080-foot-long public pier at the same location as the closed pier with pedestrian access and recreational amenities;
- Construct a new 400-foot-long breakwater perpendicular to and connected to the new pier, providing pedestrian access and recreational amenities;
- Provide recreational amenities on the pier and breakwater that could include interpretive and educational signs, benches, shade canopy, seats, and a fish

cleaning station;
- Provide ferry infrastructure including but not limited to universal charging and boarding float(s), landing(s), gangway(s), and security entrance;
- Dredging along the existing 100-foot wide United States Army Corps of Engineers federal navigation channel that parallels the closed pier.
- Construct a new public plaza with amenities such as a public restroom, benches, and bicycle parking;
- Implement improvements to University Avenue, including repaving and restriping between the round-about intersection with Marina Boulevard and the intersection with Seawall Drive and a new raised bicycle track, passenger drop off zone, and public bus infrastructure;
- Implement improvements to Seawall Drive, including re-alignment, repaving, and restriping;
- Develop a portion of the planned Bay Trail Extension, south of the pier and along Seawall Drive;
- Renovate the parking lot off Seawall Drive with new pavement, surfacing, striping, lighting, and stormwater treatment;
- Provide new landscaping as well as tree removal and replacement;
- Provide new way-finding signage and replacement lighting;
- Install new electric infrastructure to charge ferry vessels;
- Install new water connections for a restroom and hose bibs;
- Install new wastewater connections for a restroom; and
- Operate new zero-emission electric passenger ferry service, connecting the Berkeley ferry terminal to San Francisco and Larkspur ferry terminals.

In addition to the project components listed above, the City is considering the following optional improvements. However, the City may choose not to implement these improvements as part of the proposed project.

- Solar panels in the renovated parking lot;
- Recreational water access to the Bay, including non-motorized watercrafts
- Recreational improvements to Shorebird Park.

EIR ENVIRONMENTAL IMPACT AREAS: The EIR will evaluate the potential physical environmental impacts that could result from implementation of the project. The topical areas that will be addressed in the EIR are: Aesthetics; Air Quality; Biological Resources; Cultural and Tribal Cultural Resources; Geology and Soils (including Paleontological Resources); Greenhouse Gas Emissions and Energy; Hazards and Hazardous Materials; Hydrology and Water Quality; Noise (including Hydro-acoustics); Land Use and Planning; Recreation; Transportation; and Utilities and Service Systems.

Section 15128 of the CEQA Guidelines requires that an EIR briefly describe possible environmental effects that are determined not to be significant. The City anticipates that no significant environmental impacts would occur related to the following topical areas: Agriculture and Forestry Resources, Mineral Resources, Population and Housing, Public Services, and Wildfire.

EIR PROJECT ALTERNATIVES: The Draft EIR will also examine a reasonable range of

alternatives to the project, including the CEQA-mandated No Project Alternative and other alternatives that are potentially feasible and may be capable of reducing or avoiding potential environmental effects while meeting most of the basic objectives of the project. In addition, the EIR will address cumulative impacts, growth-inducing impacts, and other issues required by CEQA.

EIR PUBLIC REVIEW SCOPING PERIOD: April 18, 2025, to May 19, 2025

During this public review period, interested agencies, organizations, businesses, and individuals are invited to provide comments about the scope of the environmental topics to be included in the EIR.

WRITTEN COMMENTS: EIR scoping comments and any questions or comments should be directed in writing to:

Liza McNulty, PE, Project Manager
City of Berkeley Parks, Recreation & Waterfront Department
2180 Milvia Street, 3rd Floor
Berkeley, California 94704

or

Email: lmcnulty@berkeleyca.gov.

EIR scoping comments must be received by **5:00 p.m. on Monday, May 19, 2025.** In addition, comments may be provided at the EIR Public Scoping Meeting (see details below). Comments should focus on the scope of the EIR.

EIR PUBLIC SCOPING MEETING: The City of Berkeley will conduct an EIR public scoping session on **Monday, May 5, 2025**, to receive comments on the scope of the EIR. The meeting will start at **6:00 PM** and will be held via video and teleconference.

To join from a PC, Mac, iPad, iPhone, or Android device: Use the link: https://us06web.zoom.us/j/83463444678?pwd=GrxgstlUpc4CX4FaRRbwQ5LgGJQ7lC.1

To join by phone: Dial +1 669 900 6833 US (San Jose) or +1 669 444 9171 US and enter Meeting ID 834 6344 4678, Passcode: 903142.

SUBJECT: **BCDC Comments on the BERKELEY WATER TRANSPORTATION PIER FERRY and Notice of Preparation of an Environmental Impact Report; BCDC Inquiry File No. AL.BY.2025.1**

Dear Liza McNulty:

Thank you for the opportunity to comment on the Notice of Preparation (NOP) of an Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA) for the proposed Berkeley Water Transportation Pier Ferry (Project), received by our office via email on April 18, 2025.

The San Francisco Bay Conservation and Development Commission (BCDC) staff is providing the following comments on the Project as a CEQA responsible agency from which a discretionary approval is necessary, as described below. BCDC will rely on the Final EIR, among other reports, when considering a permit application for the Project, and we appreciate this opportunity to comment on information and analyses to be included in the scope of the EIR. While the description of the Project in the NOP is not specific enough for BCDC staff to comment on every potential issue that could be raised with respect to BCDC's laws and policies, staff has prepared the following comments outlining issues under BCDC's jurisdiction that we believe should be addressed. The following comments are based on BCDC staff review of the NOP, the McAteer-Petris Act (Title 7.2 of the California Government Code), and the S*an Francisco Bay Plan* (Bay Plan).

BCDC is a State planning and regulatory agency with permitting authority over San Francisco Bay, the Bay shoreline, and Suisun Marsh, as established in the McAteer-Petris Act and the Suisun Marsh Preservation Act, respectively. Per the McAteer-Petris Act, BCDC is responsible for granting or denying permits for any proposed fill; extraction of materials; or substantial changes in use of any water, land, or structure within the Commission's jurisdiction (Government Code Section 66632). Additionally, BCDC establishes land use

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

policies for the Bay as a resource and for development of the Bay and shoreline in the Bay Plan, which provides the basis for the Commission's review and actions on proposed projects.

Based on the NOP, the majority of the Project would be located within at least two areas of BCDC's permitting jurisdiction:

- In the San Francisco Bay, being all areas subject to tidal action, including the marshlands lying between mean high tide and five feet above mean sea level; tidelands (land lying between mean high tide and mean low tide); and submerged lands (Government Code Section 66610(a)); and
- In the shoreline band, consisting of all territory located between the shoreline of the Bay, as defined above, and 100 feet landward of and parallel with the shoreline (Government Code Section 66610(b)).

In addition, portions of the Project are located within Bay Plan-designated "Waterfront Park, Beach" priority use areas. Within the Commission's jurisdiction, projects proposed within these priority use areas must be consistent with the Bay Plan's Recreation policies and any relevant policies specified in Bay Plan Map 4.

BCDC requests that the City of Berkeley include mapping of BCDC's jurisdiction in the forthcoming EIR and pay particular attention to potential project impacts that may occur in these areas as they relate to the Commission's policies. The EIR project description should also clearly detail where each component of the Project would take place relative to the Commission's jurisdiction. BCDC staff is available to review any mapping or draft language to ensure that our agency's jurisdiction is accurately depicted and described.

BCDC provides data and mapping tools on our website at https://www.bcdc.ca.gov/resources/maps-and-data/. Copies of our planning documents are available at https://www.bcdc.ca.gov/resources/plans/. BCDC's laws and regulations can be referenced at https://www.bcdc.ca.gov/resources/laws-and-regulations/.

PROJECT UNDERSTANDING

Based on information provided in the NOP and accompanying technical documents, we understand the Project to include a combination of in-Bay and shoreline features that would:

- Demolish portions of the closed pier;
- Construct a new 1,080-foot-long public pier at the same location as the closed pier with pedestrian access and recreational amenities;
- Construct a new 400-foot-long breakwater perpendicular to and connected to the new pier, providing pedestrian access and recreational amenities;
- Provide ferry infrastructure, including, but not limited to, universal charging and boarding float(s), landing(s), gangway(s), and security entrance(s);

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

- Dredge along the existing 100-foot-wide United States Army Corps of Engineers federal navigation channel parallel to the closed pier;
- Construct a new public plaza with public access;
- Implement improvements to University Avenue and Seawall Drive;
- Develop a portion of the planned Bay Trail Extension, south of the pier and along Seawall Drive;
- Renovate the parking lot off Seawall Drive with new pavement, surfacing, striping, lighting, and stormwater treatment;
- Provide new landscaping as well as tree removal and replacement;
- Provide new way-finding signage and replacement lighting;
- Install new electric infrastructure to charge ferry vessels;
- Install new water connections for a restroom and hose bibs;
- Install new wastewater connections for a restroom; and
- Operate new zero-emission electric passenger ferry service, connecting the Berkeley ferry terminal to San Francisco and Larkspur ferry terminals.

The Project may also include the following potential improvements:

- Solar panels in the renovated parking lot;
- Recreational water access to the Bay, including non-motorized watercrafts; and
- Recreational improvements to Shorebird Park.

Additionally, BCDC understands that the Project and EIR alternatives analysis will be based on the following objectives:

1. Enhance public access and recreational opportunities at the Berkeley Waterfront; and
2. Provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco.

ENVIRONMENTAL ANALYSIS

Below is a list of environmental topics from the NOP and a description of how they overlap with BCDC policy areas that staff will use to evaluate the Project for any submitted permit application. Including these analyses in the EIR and addressing any related impacts with mitigation measures will support staff in developing relevant conditions and necessary findings to include in the permit staff recommendation. Note that this is not meant to be a complete description of topics or policies to be analyzed in the EIR and is only based on the limited information provided in the NOP.

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

Aesthetics

The Bay Plan includes a policy section on Appearance, Design, and Scenic Views upon which the Commission will base its findings for the Project's visual impacts on the Bay. In defining the significance of the Project's aesthetic impacts, please consider the findings and policies in this section, and acknowledge these policies in the regulatory setting of the analysis. BCDC provides additional guidance on the interpretation of these policies in the Public Access Design Guidelines for Shoreline Spaces, particularly in the sections related to Visual Access, Visual Quality, and Bay Setting. Please consider the Guidelines in your evaluation of the Project's potential effects on scenic vistas and scenic resources. The Guidelines are available on BCDC's website (https://www.bcdc.ca.gov/planning/SPLG.pdf).

Biological Resources

The Bay Plan includes policy sections related to biological resources, including Fish, Other Aquatic Organisms and Wildlife; Subtidal Areas; Dredging; and Mitigation. Please review the policies and findings in these sections and acknowledge them in the regulatory setting for this analysis. As proposed, the Project would likely result in permanent impacts to habitat by placing solid fill in the Bay, suspending fill that would shade the water, increasing the number and frequency of ferry trips in the vicinity and along proposed ferry routes, and dredging. The Project would also involve temporary impacts from construction, including construction activities such as demolition and pile driving, which have the potential to release toxic substances and other materials into the Bay and result in take of aquatic organisms through noise and sediment generation. Notable native species that occur in the project area include longfin smelt, green sturgeon, Chinook salmon, Pacific Herring, eelgrass, steelhead, and California least tern. Please ensure that the EIR analyzes all potential impacts on these and any other special-status species found in the area. Please also ensure that the EIR discusses potential species and habitat impacts from loss of habitat, shading, increased ferry traffic, and construction activities.

The NOP notes that dredging will occur "along the existing 100-foot wide USACE federal navigation channel that parallels the closed pier." Please ensure that the EIR project description provides information on the dimensions of the channel being dredged, estimated volume, proposed project depths, equipment to be used, plans for the beneficial reuse and/or disposal of dredged sediment, and when dredging is expected to begin in order to provide adequate context for the environmental analysis. Analysis of dredging impacts should discuss environmental work windows and any minimization measures being considered to reduce impacts.

The proposed Project intends to dredge the federal navigation channel adjacent to the existing pier, which extends into the shallow subtidal area of the San Francisco Bay. From BCDC's understanding, the proposed dredged area has not been dredged in over 20 years. Due to the absence of dredging during this time, a benthic community will have been established in this subtidal area. Thus, dredging for the Project will be viewed as a large "new work" dredging project. Impacts to the subtidal habitat area as a result of dredging should be discussed in the EIR analysis, and it should also describe the mitigation that will

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

be required for those impacts. The analysis should also assess the local and Bay-wide effects of the Project in terms of tidal hydrology, sediment transport and budget, localized erosion and accretion, and the Bay's bathymetry.

The Bay Plan's Mitigation policies provide direction for mitigating impacts to Bay natural resources (such as water surface area, volume, or circulation; aquatic organisms and habitat; subtidal areas; and tidal marshes and flats) that cannot be avoided. In further developing the project description and designing potential mitigation measures in response to identified impacts, please consider these policies and engage with BCDC staff to ensure that any mitigation measures proposed will be consistent the Bay Plan. Please note BCDC's expectations for approaching mitigation as established in Mitigation Policy No. 1:

> "Projects should be designed to avoid adverse environmental impacts to Bay natural resources such as to water surface area, volume, or circulation and to plants, fish, other aquatic organisms and wildlife habitat, subtidal areas, or tidal marshes or tidal flats. Whenever adverse impacts cannot be avoided, they should be minimized to the greatest extent practicable. Finally, measures to compensate for unavoidable adverse impacts to the natural resources of the Bay should be required. Mitigation is not a substitute for meeting the other requirements of the McAteer-Petris Act."

Mitigation Policy No. 3 also provides that communities surrounding both the Project and compensatory mitigation site should be meaningfully involved in an equitable and culturally relevant manner, which may include consultation with the community in the identification and prioritization of potential projects, and in the monitoring and programming of a mitigation site.

Geology and Soils

The analysis in the EIR's geology and soils section relates to issue areas that BCDC will consider in the permit application process for the Project, including the safety and stability of the proposed pier and breakwater, the location of proposed amenities on historic Bay fill, and how these affect the long-term stability, safety, and usability of the proposed public access areas and improvements. The EIR should discuss the overall suitability of the underlying geologic unit/soils for the Project, disclose the potential for failure as a result of seismic activity or ground failure, and describe the necessary measures to avoid or mitigate such failure. Please also discuss the potential for ferry wake and operations to affect erosion rates along the shoreline.

Hazards and Hazardous Materials

The Project has the potential to release hazardous materials into the environment during both the construction and operation phases. Due to the age of the existing pier, it is possible it was treated with creosote or similar chemicals that could be dispersed during demolition. The EIR should describe the composition of the existing pier and note whether there is potential for creosote or other treatments to be present, and discuss the potential for dispersal.

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

Additionally, our understanding is that an all-electric ferry service will rely heavily on the use of lithium-ion batteries, which can present a significant hazard if damaged or ignited. Please ensure that the EIR discusses potential hazards related to the reasonably foreseeable upset and accident conditions involving the use and storage of batteries on site.

Hydrology and Water Quality

The Bay Plan includes policy sections for Water Quality, Water Surface Area and Volume, and Climate Change that are relevant to the EIR's hydrology and water quality analysis. Please review these findings and policies and acknowledge them in the regulatory setting for this issue area. As part of the setting and analysis, please clearly identify the water quality standards, plans, and/or discharge requirements applicable to the Project site.

Because sea levels are expected to rise over the life of the Project, the analysis of operational impacts would be incomplete without a consideration of sea level rise scenarios. As part of the hydrology analyses, including the analysis of the Project's effect on drainage and whether flood hazards present a risk of releasing pollutants, please use relevant sea level rise scenarios in accordance with the best available science (currently considered to be the Ocean Protection Council's 2024 Sea Level Rise Guidance). The Project warrants an analysis at the OPC Guidance's medium-high risk level at a minimum, which is appropriate to provide "a precautionary protection that can be used for less adaptive, more vulnerable projects or populations that will experience medium to high consequences as a result of underestimating sea level rise," and using the high emissions assumption. Please ensure that all analyses use the NAVD88 datum.

Note that as part of the application for the Project, the project proponents are expected to provide a sea level rise risk assessment prepared by a qualified engineer, per Bay Plan Climate Change Policy No. 2. The risk assessment will be expected to include mid- and end-of-century scenarios at the medium-high risk level, with the high emissions assumption, using the NAVD 88 datum.

Land Use and Planning

The McAteer-Petris Act and the Bay Plan are a State law and a land use plan, respectively, adopted for the purpose of avoiding or mitigating an environmental effect and should be included in the regulatory settings for this section as well as considered in the impact analysis. Note that the entirety of the landside and pier components will take place within a Bay Plan-designated Waterfront Park, Beach Priority Use Area and should be consistent with the requirements of that designation. Additionally, please note that Part V of the Bay Plan includes site specific policies for locations near the Project site, including Policy 15 of Plan Map 4:

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

> **"Berkeley Waterfront - Cesar Chavez Park** - Preserve marina, beach, small boat launch, windsurfing access, fishing pier, interpretive center and multi-use trails. Possible ferry terminal. Allow if compatible with park and marina use; serve with bus public transit to reduce traffic and parking needs. Provide signage regarding fish consumption advisories for anglers."

Please ensure that the EIR assesses the potential for the Project to interfere with the implementation of these policies, and note that any conflict would constitute a significant impact.

Public Services and Recreation

Per the McAteer-Petris Act, BCDC is tasked with ensuring maximum feasible public access to the Bay. As such, BCDC has permitted a number of required public recreation facilities along the shoreline in the vicinity of the Project site, including the existing pier and nearby segments of the San Francisco Bay Trail. Additionally, please note that the Bay itself functions as a recreational facility in the Project's vicinity, as indicated by Plan Map Policy No. 15, quoted above. The EIR should document the recreational uses of the Bay and shoreline in and around the Project site, identify the service area and service population for the recreational facilities serving those uses, and assess whether the recreational facilities provided as part of the Project are commensurate with the projected need generated by the Project. The EIR should evaluate whether implementation of the Project could result in a deterioration of the facilities that support those identified recreational uses. If so, and if those uses would then be required to relocate to other locations around the Bay, the EIR should evaluate whether this could result in substantial physical deterioration of those alternative facilities.

Transportation

One of BCDC's key considerations for assessing maximum feasible public access is the convenience and safety of site access where a project connects to the larger transportation network. Additionally, the Bay Plan includes policies that address the siting and design of active transportation facilities and ferry terminals, both of which are components of the proposed Project. Please review the findings and policies in the Bay Plan's sections on Transportation and Public Access and acknowledge them in the regulatory settings for the transportation analysis. Please consider these policies in your analysis of whether the Project would conflict with a policy addressing transit, roadway, bicycle, and pedestrian facilities, and whether the Project would increase transportation hazards.

- Through its permitting actions, the Commission has required the implementation of numerous public access facilities, many of which are linked together by segments of the San Francisco Bay Trail. As part of the transportation analysis, the EIR should assess any potential conflicts between the Project and the Bay Plan's public access policies, existing recreational uses and public access, as well as the planned alignment of the Bay Trail along the Project site.

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

Tribal Cultural Resources

As part of the Bay Plan's policies on Environmental Justice and Social Equity, the Commission is required to consider its guiding principles on environmental justice and social equity in all of its actions and activities. The first of these guiding principles is to "recognize and acknowledge the California Native American communities who first inhabited the Bay Area and their cultural connection to the natural resources of the region." Additionally, Public Access Policy No. 5 states that public access should embrace "local multicultural and indigenous history and presence," and Recreation Policy No. 4 states that parks should emphasize historical and cultural education and interpretation.

Please ensure that the EIR includes a description of the Native American history and cultural resources associated with the Project site. In preparing the EIR, please conduct meaningful outreach towards the tribes associated with this area as part of the AB 52 consultation requirement. Additionally, please ensure that the cultural and tribal cultural resources environmental setting identifies all historically and culturally significant resources at the Project site and at any related sites (if applicable), and note in the analysis whether and how the Project will acknowledge or incorporate information about those resources in its design or programming.

Utilities and Service Systems

Please ensure the EIR describes measures in the design to address the reliability and redundancy of the utilities and service systems necessary for the Project and any impacts these utilities and systems may have on the environment. Please ensure the impacts of the Project on the coastal storm drain and sewer systems are also addressed, in current and future scenarios.

Alternatives Analysis

Section 66605 of the McAteer-Petris Act includes the following provisions relevant to the selection and evaluation of alternatives for the EIR: "…fill in the bay and certain waterways… for any purpose should be authorized only when no alternative upland location is available for such purpose;" "the water area authorized to be filled should be the minimum necessary to achieve the purpose of the fill;" and "the nature, location, and extent of any fill should be such that it will minimize harmful effects to the bay area, such as, the reduction or impairment of the volume surface area or circulation of water, water quality, fertility of marshes or fish or wildlife resources, or other conditions impacting the environment, as defined in Section 21060.5 of the Public Resources Code." These requirements are reflected in policies throughout the Bay Plan, including:

- **Bay Plan Water Surface Area and Volume Policy No. 1:** ""filling and diking that reduce surface area and water volume should… be allowed only for purposes providing substantial public benefits and only if there is no reasonable alternative."

Docusign Envelope ID: 33402936-6D78-4CBF-9DE2-1981113FA89A

- **Tidal Marshes and Tidal Flats Policy No. 1:** "filling, diking, and dredging projects that would substantially harm tidal marshes or tidal flats should be allowed only for purposes that provide substantial public benefits and only if there is no feasible alternative."
- **Subtidal Areas Policy No. 2:** "subtidal areas that are scarce in the Bay or have an abundance and diversity of fish, other aquatic organisms and wildlife should be conserved. Filling, changes in use, and dredging projects in these areas should therefore be allowed only if: (a) there is no feasible alternative; and (b) the project provides substantial public benefits."

Therefore, the alternatives evaluated in the EIR should include at least one alternative that reduces or eliminates the amount of fill proposed.

Additionally, during the May 12, 2025, BCDC Design Review Board briefing on the Project, a number of concerns were raised by members of the public that siting the ferry terminal in the proposed location would have a detrimental effect on water recreation such as swimming and board sailing that could lead to impacts on other water access points regionally as individuals who currently use the Berkeley Marina are displaced. Please ensure that at least one of the alternatives allows for the evaluation of an alternate location for the ferry terminal on the waterfront, and evaluate whether an alternate location could reduce potential impacts related to recreation, ferry wake, dredging, and impacts on biological resources, etc.

If all such alternatives are determined to be infeasible and not appropriate to include in the EIR analysis, please include a detailed discussion of why these alternatives are infeasible and how the determination was made.

Please note that, as part of the BCDC permitting process, the project proponents will need to demonstrate to the satisfaction of the Commission that the Project is consistent with Government Code Section 66605. A thorough analysis of these issues in the EIR will likely support the project proponents in this effort.

Thank you for providing this opportunity to review the NOP for the Berkeley Water Transportation Pier Ferry Project. We look forward to working with you as the Project is developed and through the permitting process. If you have any questions regarding this letter or the Commission's policies and permitting process, please do not hesitate to contact Alyssa Plese at alyssa.plese@bcdc.ca.gov or 415-352-3615.

Sincerely,

DocuSigned by:

Dear Liza McNulty:

BERKELEY WATER TRANSPORTATION PIER FERRY
NOTICE OF PREPARATION
SCH # 2025040995.

The California Department of Fish and Wildlife (Department) received a Notice of Preparation (NOP) from the City of Berkeley for the Berkeley Water Transportation Pier Ferry (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that the Department, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

DEPARTMENT ROLE

The Department is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the state. (Fish & G. Code, § 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines §15386, subd. (a).) The Department, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly for purposes of CEQA, the Department is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources. The Department is also responsible for marine biodiversity protection under the Marine Life Protection Act in coastal marine waters of California, and ensuring fisheries are sustainably managed under the Marine Life Management Act.

[1] CEQA is codified in the California Public Resources Code in § 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with § 15000.

The Department is also submitting comments as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). The Department expects that it may need to exercise regulatory authority pursuant to the Fish and Game Code. To the extent implementation of the Project may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), related authorization as provided by the Fish and Game Code may be necessary.

PROJECT DESCRIPTION SUMMARY

Proponent: City of Berkeley

Objective: The purpose of the Project is to revitalize the Berkeley Waterfront by developing a new dual purpose pier and ancillary uses that support both public recreation and a zero-emission public ferry service.

Location: The Project is located within the City of Berkeley waterfront at the Berkeley Pier, including adjacent land along Seawall Drive and University Avenue.

MARINE BIOLOGICAL SIGNIFICANCE

The San Francisco Bay-Delta is the second largest estuary in the United States and supports numerous aquatic habitats and biological communities. It encompasses 479 square miles, including shallow mudflats. This ecologically significant ecosystem supports both state and federally threatened and endangered species and sustains important commercial and recreational fisheries.

STATE AND FEDERALLY LISTED AND COMMERCIALLY/RECREATIONALLY IMPORTANT SPECIES

Protected species under the State and Federal Endangered Species Acts that could potentially be present near Project activities include:

- Longfin smelt (*Spirinchus thaleichthys*), state-threatened
- Chinook salmon (*Oncorhynchus tshawytscha*), state and federally threatened (Central Valley Spring-run), state and federally endangered (Sacramento River Winter-run), state species of special concern (Central Valley Late Fall Run, Central Valley Fall Run)
- Steelhead (*Oncorhynchus mykiss*), federally threatened (Central California Coast evolutionary significant units)
- Green sturgeon (*Acipenser medirostris)*, federal threatened (Southern Distinct Population Segment)
- White sturgeon (*Acipenser transmontanus)*, state candidate species
- Pacific lamprey (*Entosphenus tridentatus*), state species of special concern

- California Least tern (*Sternula antillarum browni),* state and federally endangered, state fully protected

Several species with important commercial/recreational fisheries value and habitat value for spawning and rearing could potentially be present near Project activities including: Pacific herring (*Clupea pallasii*), eelgrass (*Zostera marina),* surfperches (*Embiotocidae*), rockfish (*Sebastes spp*.), California halibut (*Paralichthys californicus),* and Dungeness crab *(Metacarcinus magister).*

COMMENTS AND RECOMMENDATIONS

The Department offers the following comments and recommendations to assist the City of Berkeley in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources. Editorial comments or other suggestions may also be included to improve the document.

I. Project Level Impacts and Other Considerations

Hydroacoustic Impacts

Comment: The NOP discusses the partial removal of the existing Berkeley Pier and installation of a public pier, 400 foot long breakwater, and infrastructure for a zero emission ferry landing. It is unclear in the NOP the extent to which pile removal and pile driving will be necessary for the removal of the existing pier and installation of the new pier and ferry landing.

Recommendations: The Department recommends the Draft Environmental Impact Report (DEIR) discuss the extent of pile driving that will occur, the expected materials and methods that will be utilized to construct the new bulkhead, and the anticipated hydroacoustic sound levels. The Department recommends the following minimization measures:

- Pile removal and installation should occur during the approved in-water work window of August 1 through November 30 to avoid impacts to aquatic species and the California least tern.
- Pile removal should be conducted using a direct pull method to minimize sediment disturbance. If a direct pull method is not feasible, a vibratory hammer can be used if the structural integrity of the piles allows.
- If a pile breaks during removal, the portion of the pile remaining should be cut off at least two feet below the surface of the sediment.
- A vibratory hammer should be used for driving piles to the maximum extent feasible.
- If an impact a hammer is necessary, a soft start technique should be implemented.

- Impact pile driving should occur at low tide, if possible.
- All impact pile driving should use a wood cushion block between the hammer and pile.
- Impact pile driving larger diameter steel and concrete piles should include a bubble curtain for additional sound attenuation.
- If hydroacoustic sound levels are anticipated to exceed the interim hydroacoustic thresholds for injury to fish, the City of Berkeley will consult with the Department regarding incidental take coverage, via a 2081(b) Incidental Take Permit, for potential take of state listed species.

Recommendation: The Department recommends that if hydroacoustic sound levels are anticipated to exceed the interim hydroacoustic thresholds for injury to fish (Attachment 1), consultation with the Department will be necessary to determine if coverage is needed for incidental take of state listed species.

Dredging

Comment: Dredging has the potential to impact multiple aquatic species and species that depend on the marine environment through entrainment, impingement, destruction of habitat, and disturbance of contaminated sediments. The Department has no record of recent dredging activities within the federal navigation channel adjacent to the existing Berkeley Pier. All dredging activities should be consistent with the guidance and recommendations of the San Francisco Bay Long Term Management Strategy (https://www.spn.usace.army.mil/Portals/68/docs/Dredging/LMTS/entire%20LMTF.pdf).

Additionally, all dredging should be conducted with mechanical methods (clamshell dredge) during the approved work windows to avoid and/or minimize the potential impacts to state listed and recreational/commercially important species. If methods other than mechanical dredging are being considered, consultation with the Department will be recommended.

Recommendation: The Department recommends that the DEIR include discussion on dredging methods and anticipated time of the year in which dredging may occur. The Department recommends the following avoidance and minimization measures as it pertains to dredging:

- All dredging should occur within The San Francisco Bay Long Term Management Strategy environmental work windows for dredging and disposal (Attachment 2).
- All dredged material deemed appropriate by the Dredged Material Management Office should be placed at an approved in-bay beneficial reuse site.

- Dredging should be conducted with mechanical methods to minimize potential impacts to state listed and commercially/recreationally valuable species and their habitat.

Eelgrass

Comment: Native eelgrass beds (*Zostera marina*) have been observed and mapped near the proposed Project. Eelgrass beds are an important part of the San Francisco Bay ecosystem and are recognized by state and federal statutes as both highly valuable and sensitive habitats. Eelgrass provides primary production and nutrients to the ecosystem along with spawning, foraging, and nursery habitat for fish and other species. Pursuant to the federal Magnuson-Stevens Fishery Conservation and Management Act, eelgrass is designated as Essential Fish Habitat for various federally managed fish species within the Pacific Coast Groundfish and Pacific Coast Salmon Fisheries Management Plans (FMP). Eelgrass is also considered a habitat area of particular concern for various species within the Pacific Coast Groundfish FMP. The importance of eelgrass to Pacific herring in San Francisco Bay has been highlighted in the Departments Pacific herring FMP. Eelgrass beds are further protected under state and federal "no-net-loss" policies for wetland habitats and are also listed by the Department as a Sensitive Natural Community with a vulnerable listing status (State Rank S3). Additionally, the importance of eelgrass protection and restoration, as well as the ecological benefits of eelgrass, is identified in the California Public Resources Code (Pub. Resources Code § 35630).

Recommendation: The Department recommends that the DEIR evaluate the Project's potential to impact eelgrass based on the in-water activities analyzed.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database that may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e)). Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field survey form can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/SubmittingData#44524420-pdf-field-survey-form. The completed form can be mailed electronically to CNDDB at the following email address: CNDDB@wildlife.ca.gov. The types of information reported to CNDDB can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/Plants-and-Animals.

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by the

Department. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089).

CONCLUSION

The Department appreciates the opportunity to comment on the NOP to assist the City of Berkeley in identifying and mitigating Project impacts on biological resources. Questions regarding this letter or further coordination should be directed Arn Aarreberg, Environmental Scientist, at (707) 791-4195 or R7CEQA@wildlife.ca.gov.

Sincerely,

Craig Shuman, D. Env
Marine Regional Manager

NOAA's Fisheries Northwest and Southwest Regions	U.S. Fish and Wildlife Service Regions 1 & 8	California/Washington/ Oregon Departments of Transportation	California Department of Fish and Game	U.S. Federal Highway Administration

MEMORANDUM

June 12, 2008

From: Fisheries Hydroacoustic Working Group

Subject: Agreement in Principle for Interim Criteria for Injury to Fish from Pile Driving Activities

To: Applicable Agency Staff

The signatory agencies, identified below, have agreed in principle to use the attached Interim Criteria for Injury to Fish from Pile Driving Activities. The agreement was concluded at a meeting in Vancouver, Washington on June 10-11, 2008 with key technical and policy staff from the Federal Highway Administration, NOAA Fisheries, U.S. Fish and Wildlife Service, the Departments of Transportation from California, Oregon, and Washington; and national experts on sound propagation activities that affect fish and wildlife species of concern. The agreed upon criteria identify sound pressure levels of 206 dB peak and 187 dB accumulated sound exposure level(SEL) for all listed fish except those that are less than 2 grams. In that case, the criteria for the accumulated SEL will be 183 dB.

These criteria will apply to all new projects beginning no later than 60 days from the date of this memorandum. During the interim 60 day period, the Transportation Agencies will work with the Services to identify projects currently in the consultation process and reach agreement on which criteria will be used to assess project effects.

The agencies agree to review the science periodically and revise the threshold and cumulative levels as needed to reflect current information. Behavioral impacts to fish and impacts to marine mammals are not addressed in this agreement. Sub-injurious effects will continue to be discussed in future meetings.

The respective agencies also agree to develop appropriate training for staff on these revised criteria, as well as a process to review and possibly refine the criteria, when appropriate.

For questions or concerns about the revised criteria, we recommend staff contact their agency environmental coordinator or agency expert on pile driving issues.

Carol H. Adkins

Federal Highway Administration*

*FHWA supports the use of these interim criteria in the states signing this agreement in principle. FHWA leaves the schedule for implementation to the discretion of the state DOTs in cooperation with their respective FHWA Division Offices and the Services.

Re: Berkeley Water Transportation Pier Ferry — Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)

Dear Liza McNulty:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Berkeley Water Transportation Pier Ferry project. The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities. The following comments are based on our review of the April 2025 DEIR.

Please note this correspondence does not indicate an official position or approval by Caltrans on this project and is for informational purposes only.

Project Understanding
The proposed project aims to revitalize the Berkeley Waterfront near Interstate (I)-80 by developing new dual-purpose pier and ancillary uses that support both public recreation and zero-emission public ferry service.

Travel Demand Analysis
With the enactment of Senate Bill (SB) 743, Caltrans is focused on maximizing efficient development patterns, innovative travel demand reduction strategies, and multimodal improvements. For more information on how Caltrans assesses Vehicle Miles Traveled (VMT) analysis for land use projects, please review Caltrans' Transportation Impact Study Guide (*link*). Caltrans looks forward to reviewing the VMT analysis in the DEIR when it is available.

Climate Change/Sea Level Rise
Please ensure that Caltrans remains informed about the various climate stressors affecting the project location, and the ongoing development and implementation of adaptation and resilience initiatives. Caltrans is particularly interested in the City of Berkeley's efforts to enhance coastal resilience along its shoreline. Given San Francisco Bay Conservation and Development Commission (BCDC) guidance and SB 272, which requires jurisdictions along the bay shoreline to develop a Regional Shoreline Adaptation Plan, please consider how the project will fit into the City's wider adaptation framework and plan. Additionally, please consider the effects of various climate stressors from sea level rise to storm surge and extreme precipitation on the project location and its surrounding location.

Given these considerations, please keep Caltrans District 4 updated on any ongoing resiliency and adaptation efforts. For inquiries or concerns within District 4's geographical boundaries, please contact the Caltrans Bay Area Climate Change Planning Coordinator at D4_ClimateResilience@dot.ca.gov.

Construction-Related Impacts
Potential impacts to the State Right-of-Way (ROW) from project-related temporary access points should be analyzed. Mitigation for significant impacts due to construction and noise should be identified. Project work that requires movement of oversized or excessive load vehicles on State roadways requires a transportation permit that is issued by Caltrans. To apply, please visit Caltrans Transportation Permits (*link*). Prior to construction, coordination may be required with Caltrans to develop a Transportation Management Plan (TMP) to reduce construction traffic impacts to the State Transportation Network (STN).

Equitable Access
If any Caltrans facilities are impacted by the project, those facilities must meet American Disabilities Act (ADA) Standards after project completion. As well, the project must maintain bicycle and pedestrian access during construction. These access considerations support Caltrans' equity mission to provide a safe, sustainable, and equitable transportation network for all users.

Encroachment Permit
Please be advised that any temporary or permanent work including traffic control that encroaches in, under, or over any portion of the State highway ROW requires a Caltrans-issued encroachment permit.

The Office of Encroachment Permits requires 100% complete design plans and supporting documents to review and circulate the permit application package. The review and approval of encroachment projects is managed through the

Encroachment Permits Office Process (EPOP) or the Project Delivery Quality Management Assessment Process (QMAP), depending on project scope, complexity, and completeness of the application. Please use the following resources to determine the appropriate review process:

- TR-0416 Applicant's Checklist (*link*)
- Caltrans Encroachment Projects Processes – Information Video (*link*)
- Flowchart, Figure 1.2 in Section 108, Overview of the Encroachment Review Process, of Chapter 100 – The Permit Function, Caltrans Encroachment Permit Manual (*link*)

The permit approval typically takes less than 60 days, but may take longer depending on the project scope, size, complexity, completeness, compliance with applicable laws, standards, policies, and quality of the permit package submitted. Projects requiring exceptions to design standards, exceptions to encroachment policies, or external agency approvals may need more time to process.

To obtain more information and download the permit application, please visit Caltrans Encroachment Permits (*link*).

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Llisel Ayon, Associate Transportation Planner, via LDR-D4@dot.ca.gov. For future early coordination opportunities or project referrals, please visit Caltrans LDR website (*link*) or contact LDR-D4@dot.ca.gov.

Sincerely,

YUNSHENG LUO
Branch Chief, Local Development Review
Office of Regional and Community Planning

Subject: City of Berkeley Pier Ferry Project Notice of Preparation of an Environmental Impact Report (EIR)

You don't often get email from lmcnulty@berkeleyca.gov. Learn why this is important

Hello,

The City of Berkeley is preparing an Environmental Impact Report (EIR) for the proposed Berkeley Water Transportation Pier Ferry Project, and is requesting public comments on the scope of the Draft EIR. The City will hold a public scoping meeting on Monday, May 5, 2025, beginning at 6 pm, via video and teleconference. The Notice of Preparation (NOP), including details regarding the public meeting, is attached here. The NOP and Project details are also available online at: Berkeley Pier with Ferry Access Project I City of Berkeley.

Re: Notice of Preparation of a Draft Environmental Impact Report for the Berkeley Water Transportation Pier Ferry, Berkeley

Dear Ms. McNulty:

East Bay Municipal Utility District (EBMUD) appreciates the opportunity to comment on the Notice of Preparation (NOP) of a Draft Environmental Impact Report (EIR) for the Berkeley Water Transportation Pier Ferry Project (Project) located in the City of Berkeley (City). EBMUD has the following comments.

WATER SERVICE

EBMUD's Central Pressure Zone, with a service elevation between 0 and 100 feet, will serve the proposed development. Separate structures on a single parcel require separate water services. When the development plans are finalized, the City should contact EBMUD's New Business Office and request a water service estimate to determine costs and conditions for providing water service to the Project. Engineering and installation of water services require substantial lead time, which should be provided for in the City's development schedule.

WATER DISTRIBUTION PIPELINES

EBMUD owns and operates water distribution and transmission water mains in EBMUD rights-of-way (R/W) in University Avenue and Seawall Drive, which provide continuous service to EBMUD's customers in the area. There is a 12-inch water main in University Avenue that crosses the proposed Project electrical utility line and an 8-inch water main in EBMUD R/W 2010-A in Seawall Drive that traverses through the Project site (see Attachment A – Map of EBMUD Distribution Pipelines and R/Ws). R/W 2010-A services Hydrant 13615, Hydrant 13616, Hydrant 13617, and numerous water meters. Any proposed construction activity in University Avenue and Seawall Drive would need to be coordinated with EBMUD so that the integrity of these water mains are maintained at all times.

EBMUD also owns three rights-of way that are adjacent to the proposed Project, R/W 2010, R/W 1650, and R/W 2548. R/W 2010 is a 20-foot-wide easement that services EBMUD Hydrant H-15918, Hydrant 12323, Hydrant 12324, and numerous water meters. R/W 1650 is a 10-foot-wide easement that services EBMUD Hydrant 19543 and water meters. R/W 2548 is a 15-foot-

Recycled Paper

wide easement that services Hydrant H-10672 and water meters. Any proposed construction activity in EBMUD rights-of-way would be subject to the terms and conditions determined by EBMUD including relocation of the water mains and/or R/W at the City's expense.

It is imperative to continue to coordinate with EBMUD during the development of street improvement projects, so reasonable time can be provided for planning, design, and construction if conflicts exist to avoid schedule impacts. The City and EBMUD will need to continue to work together in developing and finalizing the scope of work for EBMUD infrastructure adjustments and relocations. EBMUD requires reasonable time to allocate resources and modify internal construction schedules. EBMUD recommends at least 18 months advance notification for upcoming street improvement projects to allow for a reasonable amount of time to perform water pipeline relocations. The following table provides a typical project schedule for EBMUD to design and relocate approximately 1,500 feet of 8-inch water pipeline. The required time may increase or decrease depending on the size, length and complexity of the water pipeline project; and if constructed by EBMUD crews or by contractor.

Required Time	**Schedule Task**
1 month	Receive Street Improvement and Understand Impacts
1 month	Review Project and Planning Assessment
2 months	Collect Survey Data or Use Existing Survey from Requesting Agency
2 months	Draft Base Drawing for Water Main Relocation
3 months	Design Water Main Relocation
2 months	Develop Construction Bid Documents
3 months	Advertise and Award Water Main Relocation Project
4 months	Install New Water Main and Provide Temporary Paving
18 months	*Reasonable Notification Time (Typical Project: 1,500 feet of 8-inch pipe)*

EBMUD will not design piping or services until soil and groundwater quality data and remediation plans have been received and reviewed and will not start underground work until remediation has been carried out and documentation of the effectiveness of the remediation has been received and reviewed. If no soil or groundwater quality data exists, or the information supplied by the City is insufficient, EBMUD may require the City to perform sampling and analysis to characterize the soil and groundwater that may be encountered during excavation, or EBMUD may perform such sampling and analysis at the City's expense. If evidence of contamination is discovered during EBMUD work on the Project site, work may be suspended until such contamination is adequately characterized and remediated to EBMUD standards.

EBMUD's water distribution pipelines and valves must always be accessible to EBMUD staff in order to maintain high-quality domestic water and fire flow services and mitigate for planned and

unplanned pipeline outages. The City is responsible for protecting in-place pipeline valves and ensuring that pipeline valves are accessible (i.e., not paved over) during and after Project construction. EBMUD recommends that the City review EBMUD as-built drawings and identify potential utility conflicts between Project improvements and existing EBMUD pipelines. Attached are EBMUD guidelines for requesting pipeline as-builts that include pipeline vertical data (see Attachment B – EBMUD Map & Utility Information Request Form and Guidelines). EBMUD's process for requesting as-built drawings is a two steps process: 1) request EBMUD water distribution maps, and 2) submit to EBMUD marked-up EBMUD water distribution maps identifying which water pipeline as-builts are needed to evaluate water pipelines within street improvements. In some cases, EBMUD as-builts are not available and in those situations EBMUD recommends local agencies to pothole and field locate utilities.

EBMUD'S DESIGN STANDARDS AND SPECIFICATIONS

When evaluating the need and method for relocating and adjusting EBMUD infrastructure (e.g., pipelines, meters, valves, and fire hydrants), please review EBMUD's Design Standards and Specifications for Mains 20-inches and Smaller, which are located on the following webpage under "Apply for Standard Water Service": https://www.ebmud.com/customers/new-meter-installation.

PIPELINE VALVE COVER ADJUSTMENTS

For utility conflicts between the Project and existing EBMUD pipeline valve covers, the City must share with EBMUD conflict locations, and existing and final pavement grade elevations. EBMUD will support paving street improvement projects as follows:

- Grade change less than 0.5-inches - For street improvement projects with a grade change elevation less than 0.5-inches, EBMUD is not obligated to adjust pipeline valve covers to facilitate the construction of street improvements, pursuant to Streets & Highways Code Section 680, which states that EBMUD may not be required to relocate its facilities for a temporary purpose. However, EBMUD will provide valve cover rings, at no cost, to be used to make valve cover adjustments as needed. The City is responsible for protecting in-place EBMUD pipeline valve covers which will be inspected by EBMUD staff post Project completion. Pipeline valves must remain accessible during and after Project construction for water distribution operations (i.e., not paved over).

- Grade change greater than 0.5-inches - For street improvement projects with a grade change elevation greater than 0.5-inches, EBMUD will support the Project by adjusting pipelines valve covers (one time) to the final street grade. However, EBMUD is not obligated to adjust valves during construction to facilitate means and methods for completing street improvements, pursuant to Streets & Highways Code Section 680, which states that EBMUD may not be required to relocate its facilities for a temporary purpose. The City is responsible for protecting in-place EBMUD pipeline valve covers which will be inspected by EBMUD staff post Project completion. Pipelines valves must remain accessible during and after Project construction for water distribution operations (i.e., not paved over).

- Pipeline Valve Cover Upgrades - If the City determines a need to upgrade old pipeline valve covers to the new Christy G-05 Valve Box and Rise Installation, EBMUD will provide the valve boxes and covers, and will reimburse the City for the valve box upgrade at a reasonable cost. To upgrade pipeline valve covers and boxes, the City must enter into a Valve Box Agreement with EBMUD prior to start of pipeline valve cover upgrades. An EBMUD Union notification will be required to complete the work by the County's contractor.

WATER METER RELOCATIONS AND ADJUSTMENTS

When an agency like the City completes street improvements (e.g., replace sidewalks, street pavement, and storm drain pipelines) to improve both street safety and street aesthetics, EBMUD supports the agency by relocating water meters to meet Project objectives, current design standards (e.g., meters need to be placed at 1-foot off the face of curb), and mitigate utility conflicts. EBMUD relocates water meters to their new location once the area is staked and is ready for final meter placement (e.g., forms for new sidewalk and other features are in place). The City is then responsible for relocating the customer's private water service line to the new meter location. EBMUD is not financially liable for work beyond the water meter (i.e., private water line).

HYDRANT RELOCATIONS OR ADJUSTMENTS (SET-BACKS/SET- FORWARDS)

When the City completes street improvements (e.g., replace sidewalks and curbs) to improve both street safety and street aesthetics, the City must ensure that there are no conflicts between existing EBMUD fire hydrants and new curb ramps and sidewalks. Fire hydrants must be located 5-feet from the edge of curb ramps and 20 to 24- inches from the face of street curbs. Hydrant relocations are horizontal offsets that require the installation of new hydrant service laterals; hydrant relocations require the City to submit Hydrant Relocation Application with EBMUD's New Business Office (510-287- 1010) or via EBMUD's online water service application at https://wsa.ebmud.com.

PRE-CONSTRUCTION MEETING

The City shall invite EBMUD's North Area Service Center Superintendent, Boyce Le Grande (510-986-7733 or boyce.legrande@ebmud.com), Assistant Superintendent, Tim Lewis (510-919-5071 or timothy.lewis@ebmud.com) and North Area Engineer Oscar Herrera (520-287-1005 or oherrera@ebmud.com) to all pre-construction meetings.

WASTEWATER SERVICE

EBMUD's Main Wastewater Treatment Plant (MWWTP) and interceptor system are anticipated to have adequate dry weather capacity to accommodate the proposed wastewater flows from this Project and to treat such flows provided that the wastewater generated by the Project meets the requirements of the EBMUD Wastewater Control Ordinance. However, wet weather flows are a concern. The East Bay regional wastewater collection system experiences exceptionally high

peak flows during storms due to excessive infiltration and inflow (I/I) that enters the system through cracks and misconnections in both public and private sewer lines. EBMUD has historically operated three Wet Weather Facilities (WWFs) to provide primary treatment and disinfection for peak wet weather flows that exceed the treatment capacity of the MWWTP. Due to reinterpretation of applicable law, EBMUD's National Pollutant Discharge Elimination System (NPDES) permit now prohibits discharges from EBMUD's WWFs. Additionally, the seven wastewater collection system agencies that discharge to the EBMUD wastewater interceptor system ("Satellite Agencies") hold NPDES permits that prohibit them from causing or contributing to WWF discharges. These NPDES permits have removed the regulatory coverage the East Bay wastewater agencies once relied upon to manage peak wet weather flows.

A federal consent decree, negotiated among EBMUD, the Satellite Agencies, the Environmental Protection Agency (EPA), the State Water Resources Control Board (SWRCB), and the Regional Water Quality Control Board (RWQCB), requires EBMUD and the Satellite Agencies to eliminate WWF discharges by 2036. To meet this requirement, actions will need to be taken over time to reduce I/I in the system. The consent decree requires EBMUD to continue implementation of its Regional Private Sewer Lateral Ordinance (www.eastbaypsl.com), construct various improvements to its interceptor system, and identify key areas of inflow and rapid infiltration over a 22-year period. Over the same time period, the consent decree requires the Satellite Agencies to perform I/I reduction work including sewer main rehabilitation and elimination of inflow sources. EBMUD and the Satellite Agencies must jointly demonstrate at specified intervals that this work has resulted in a sufficient, pre-determined level of reduction in WWF discharges. If sufficient I/I reductions are not achieved, additional investment into the region's wastewater infrastructure would be required, which may result in significant financial implications for East Bay residents.

To ensure that the proposed Project contributes to these legally required I/I reductions, the lead agency should require the Project applicant to comply with EBMUD's Regional Private Sewer Lateral Ordinance. Additionally, it would be prudent for the lead agency to require the following mitigation measures for the proposed Project: (1) replace or rehabilitate any existing sanitary sewer collection systems, including sewer lateral lines to ensure that such systems and lines are free from defects or, alternatively, disconnected from the sanitary sewer system, and (2) ensure any new wastewater collection systems, including sewer lateral lines, for the Project are constructed to prevent I/I to the maximum extent feasible while meeting all requirements contained in the Regional Private Sewer Lateral Ordinance and applicable municipal codes or Satellite Agency ordinances.

WATER CONSERVATION

The Project presents an opportunity to incorporate water conservation measures. EBMUD requests that the City include in its conditions of approval a requirement that the City comply with Assembly Bill 325, "Model Water Efficient Landscape Ordinance," (Division 2, Title 23, California Code of Regulations, Chapter 2.7, Sections 490 through 495). The City should be aware that Section 31 of EBMUD's Water Service Regulations requires that water service shall not be furnished for new or expanded service unless all the applicable water-efficiency measures

described in the regulation are installed at the City's expense.

If you have any questions concerning this response, please contact Sandra Mulhauser, Senior Civil Engineer, Major Facilities Planning Section at (510) 287-7032.

Sincerely,

David J. Rehnstrom
Manager of Water Distribution Planning

Map & Utility Information Request Form

(Fillable PDF form)

Date of Submission:		
Requestor:	Name	
	Company/Agency	
	Address	
	Email	
	Phone	
Purpose of Request: Provide brief reason for the requested Mapping or Utility Information		

Include a Vicinity Map with all requests and
a Highlighted Map with all UTILITY INFORMATION requests

(See the Map & Utility Information Guidelines for map examples)

With this submittal, I agree to the following:

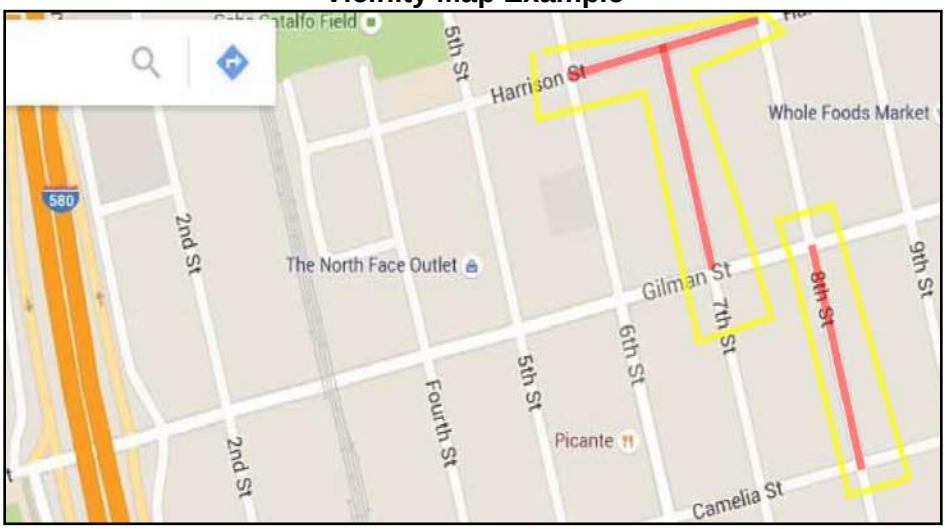
This information is furnished as a public service by East Bay Municipal Utility District. The District makes every effort to produce and publish the most current and accurate information possible. This information must be accepted and used by the recipient with the understanding that the District makes no warranties, expressed or implied, concerning the accuracy, completeness, reliability, or suitability for the use of this information. Furthermore, the District assumes no liability associated with the use or misuse of such information. Please notify the District if discrepancies are found.

By receipt of requested documents, the DOCUMENT RECIPIENT agrees that he or she, and/or any other authorized representatives of the DOCUMENT RECIPIENT, will provide no copy (nor partial copy) to any other person or agency, will not redistribute any document to any other entity, business or individual, nor use the document for other than the specified purpose. At the point the document is no longer required for use by the DOCUMENT RECIPIENT, the data shall be returned to the District or destroyed.

EAST BAY MUNICIPAL UTILITY DISTRICT

Map & Utility Information Request Guidelines

July 29, 2019



REQUESTING MAP INFORMATOIN FROM EBMUD

Mapping Services provides electronic PDF's of the WATER DISTRIBUTION SYSTEM map used by the District. Requests for maps showing other utilities should be submitted through the responsible agency. Water distribution pipelines and appurtenances will be shown as close as possible to actual field locations, but portions are often shifted or distorted to allow for visual clarity between graphic elements.

Complete the attached **Map & Utility Information Request Form** and include a **Site Vicinity Map** for the area being requested *(see Sample Vicinity Map below).*

> ***Note to homeowners:*** *Include a copy of personal identification, such as a Driver's License, with the request. The area being requested by residents must include the residence or property of the requestor. If the requested area does not specifically include the requestor, then the group or organization seeking this information must be properly identified.*

Vicinity Map Example

Submit requests using one of the following methods *(email preferred)*:

- Email: *MapUnit@ebmud.com;* Subject: *Mapping Information Request*
- Mail: *EBMUD Mapping Services Request, PO Box 24055, MS 805, Oakland, CA 94623-1055*

FAQs

How long will it take to process the request?

Requests are typically processed within five business days. The completeness of the information provided, the size of the area requested, and the volume of requests received each day may impact the processing time. Mapping Services may process requests on a rotating basis, so it is not necessary to address the request to a specific individual.

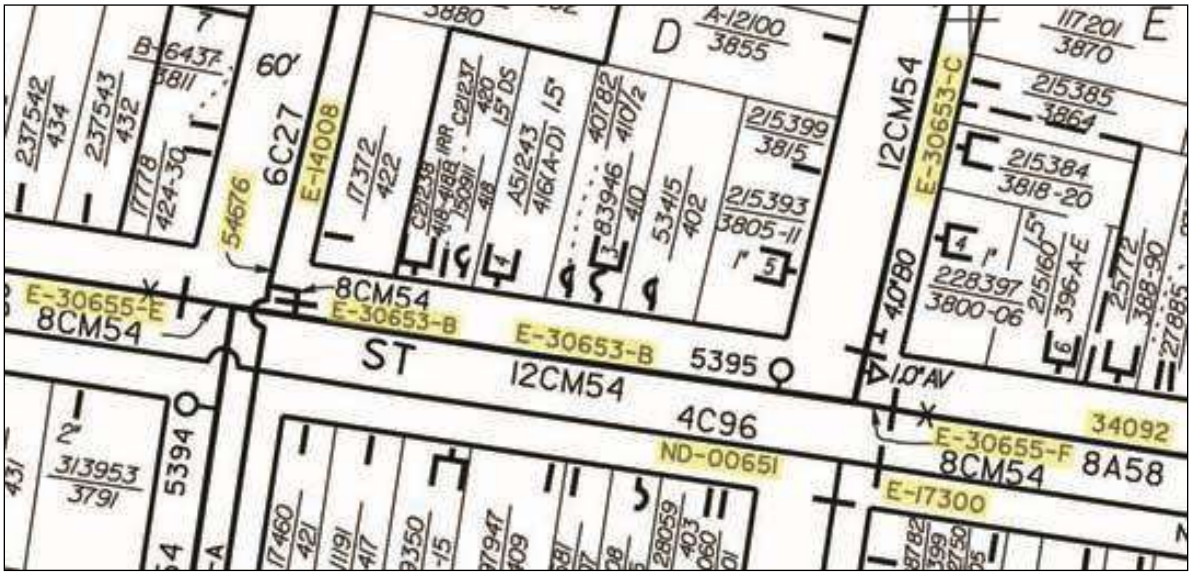
What if more detailed or accurate information is needed?

After receiving and reviewing the map provided, if more detail is needed, such as pipeline construction drawings showing pipe depth, please refer to **Page 2** of this guideline.

EAST BAY MUNICIPAL UTILITY DISTRICT

Map & Utility Information Request Guidelines

July 29, 2019



REQUESTING UTILITY INFORMATION FROM EBMUD

After receiving and reviewing the initial requested Water Distribution System map, if more detail is needed, such as detailed utility information, more accurate location, pipe depth, etc., please complete the attached **Map & Utility Information Request Form** and also include a map with **highlighted Extension Number(s)** to identify the construction drawing being requested *(see example of highlighted map below).*

Identifying Extension Numbers *(Required for UTILITY INFORMATION requests)*

An Extension Number is a number used to track the construction drawings for a pipe segment. The extension number may be five numbers only or five numbers with a one or two letter prefix and may include a single letter suffix. *NOTE: The "ND" designation means that EBMUD has "No Data" or construction drawings available for the pipeline.*

Highlighted Extension Number Map Example:

Submit requests using one of the following methods *(email preferred):*

- Email: *utility.info@ebmud.com*, Subject: *Utility Information Request*
- Mail: *EBMUD Utility Information Request, PO Box 24055, MS 504, Oakland, CA 94623-1055*

FAQ

What does the larger number near the Extension Number represent?

The Pipe Designation Number is the larger text, typically located below the pipe and near the extension number (e.g., 12CM54). This number represents the pipe's ***NOMINAL DIAMETER***, ***MATERIAL/LINING/COATING CODE***, and ***INSTALLATION YEAR***, in that order.

Re: 2025040995 Berkeley Water Transportation Pier Ferry Project, Alameda County

Dear Ms. McNulty:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Mathew.Lin@NAHC.ca.gov.

Sincerely,

Mathew Lin

Subject: [EXT] Pier-Ferry Public Outreach & NOP Comment - Nototomne Cultural Preservation

CAUTION: This email originated from outside of Rincon Consultants. Be cautious before clicking on any links, or opening any attachments, until you are confident that the content is safe .

Upon receipt of the NOP, Mr. Timothy Perez from Nototomne Cultural Preservation requested a meeting / presentation for the Project (not sure if it matters, but this request came from the NOP, not from AB 52 notification).

Meeting on 4/30/2025, 1 pm
Timothy Perez was only attendant (huskanam@gmail.com)

Comments:

- Due to the trenching work for power (and possibly other underground work), Mr. Perez recommended that we include cultural sensitivity training for the contractor.
- Mr. Perez does not think that an on-site monitor would be required given the scope of work anticipated.
- No other concerns.

Thanks,

RE: Berkeley Water Transportation Pier Ferry

Dear Liza,

Thank you for your letter dated April 18, 2025, regarding the proposed project. Wilton Rancheria ("Tribe") is a federally recognized Tribe as listed in the Federal Register, Vol. 74, No. 132, p. 33468-33469, as "Wilton Rancheria of Wilton, California". The Tribe's Service Delivery Area ("SDA") as listed in the Federal Register, Vol. 78, No. 176, p. 55731, is Sacramento County. The Tribe's Trust Lands are in Sacramento County however, the Tribe's ancestral territory spans from Sacramento County to portions of the surrounding Counties.

Although your project is within the ancestral territory of the Wilton Rancheria, currently we do not have any comments. We appreciate your continued outreach and/ or consultation for future projects and respectfully request that you contact us if there are any project updates or changes.

Thank you,

"\Vilton Rancheria

Some people who received this message don't often get email from lmcnulty@berkeleyca.gov. Learn why this is important

Hello,

The City of Berkeley is preparing an Environmental Impact Report (EIR) for the proposed Berkeley Water Transportation Pier Ferry Project, and is requesting public comments on the scope of the Draft EIR. The City will hold a public scoping meeting on Monday, May 5, 2025, beginning at 6 pm, via video and teleconference. The Notice of Preparation (NOP), including details regarding the public meeting, is attached here. The NOP and Project details are also available online at: Berkeley Pier with Ferry Access Project | City of Berkeley.

Berkeley, California 94704
From: **Berkeley Waterfront Community Coalition**
Re: **Berkeley Water Transportation Pier Ferry EIR Scoping Comments**

Berkeley Waterfront Community Coalition is a nonprofit organization formed under the auspices of Berkeley Partners for Parks, a 501(c)3 organization. Its founding members are motivated by the diversity and range of stakeholders in the waterfront who nevertheless have few channels of shared communication for supporting this unique urban shoreline. BWCC's mission is to develop projects that raise awareness of these stakeholders, enhance a sense of community, and support the waterfront's role in providing value as affordable public access to blue- and greenspace amenities to the region. Below we submit comments in response to City of Berkeley's (COB) Notice of Preparation and Scoping Meeting Environmental Impact Report for the Berkeley Water Transportation Pier Ferry (NOP), dated April 18, 2025, in which COB is the lead agency and the Water Emergency and Transportation Authority (WETA) is the responsible agency under the proposal. In these comments, we also reference the City of Berkeley Public Tidelands Area Project, aka the Waterfront Specific Plan (WSP), for commercial redevelopment and recreation in the same area as the ferry project.

Overview of concerns

The Berkeley marina has long been a waterfront agora and mecca for city residents and visitors seeking to use and enjoy its singular mixture of natural and human resources. It draws a range of people of widely divergent economic means from Berkeley, neighboring cities, and afar. All seek respite and recreation options in this local and regional gem. Projects proposing major changes to the area's physical and social landscape must undergo rigorous debate about impacts, costs, and benefits affecting both built structures and the cultural and human environment. In view of this, the EIR must thoroughly and rigorously assess the physical, cultural and human environmental impacts of the proposed new Berkeley pier and ferry service, expected to serve around **915 passengers departing per day** (about 0.7% of the Bay Bridge vehicular traffic), with its attendant facilities, including parking. In particular, the scope of the EIR must characterize the individual and cumulative effects of a dual construction (pier plus ferry facilities) on equitable access by the public, capital infrastructure and ongoing costs for Berkeley/Alameda County residents, **constriction of the marina's limited parking** options, impacts on sustainable fishing and recreational boating, other environmental

impacts and overall utility to the people who use the marina. The scoping should thoroughly consider alternatives to the proposed WETA ferry, including **smaller ferries**, **inside-marina docking**, and **no ferry at all**. It must clearly evaluate the human and environmental impacts of turning the marina into a **transportation hub for a limited population,** versus reconstructing the pier to enable the Berkeley waterfront to serve as a park unique to the Bay Area.

The outline of comments below is as follows:

1. Impact on social equity and cultural resources
2. Baseline conditions must be with pier and without ferry
3. Impact on recreational and subsistence fishing
4. Fish habitat
5. Dredging for WETA ferry project is new dredging
6. Characterization of alternatives
    a. Alternative 1: Ferry dock inside Marina
    b. Alternative 2: Smaller scale ferry
7. Impact of tree removal
8. Ferry parking management
9. Bird nesting and feeding grounds
10. Economic factors to contextualize project impact
11. Compatibility of electrification and emergency service

1. Impacts on social equity and cultural resources

The Berkeley Pier has long standing cultural significance for Berkeley. Since it was closed to ferries in 1937, it has been a focal point for recreation and an important, low-cost asset for many visitors. The Berkeley Fishing Memories Oral History Project documents intergenerational and community connections to the outdoors as experienced at the pier and waterfront by Berkleyans and frequent visitors. It reveals how people have experienced and appreciated the recreational pier and waterfront as "Berkeley's backyard," connoting a low-cost, welcoming, relaxed atmosphere where children and adults enjoy the outdoors in a relatively safe space, for almost 90 years. This use of this space is historical and current. For Berkeley, Alameda County, and beyond, the pier and Berkeley Marina area are integral to **low-cost public access to bluespace.** Among other data, the Kittleson parking study (p. 42) across lots in the waterfront area underscores the socioeconomic diversity of current Berkeley waterfront visitors. Forty-seven percent reported earning *below* the median household income for Berkeley of $108,558 (https://www.census.gov/quickfacts/fact/table/berkeleycitycalifornia/PST045224).

Science increasingly shows the positive impacts of regular bluespace exposure on mental and physical health (Gascon et al. 2017, Pouso et al. 2021, Sturm and Cohen 2014, While et al. 2020). As the **only urban shoreline** in Berkeley, it provides a crucial, inclusive center for public recreation, relaxation, interaction, and growth through **multiple educational and sport-related resources located at the Marina.** Further, it provides these benefits to historically underserved communities and low- and middle-income users who have fewer means to travel to other coastal areas for shoreline access.

While the NOP notes maintaining public space access as an objective, related COB and WETA project documents and considerable COB Parks Department staff time has focused on the needs of the proposed ferry service as the primary objective, with recreation secondary. For example, during the course of WETA ferry project negotiations, **funds earmarked for waterfront and marina infrastructure have been diverted to the ferry project at the expense of maintaining existing recreational amenities.** Further, basic, long-standing facilities central to the waterfront and marina's success as a bluespace public good – e.g. the failing seawall along the Bay Trail bike path in front of the area's two sailing clubs and docks, the recreational east dock in the South Cove, and the watersports launch at Hs Lordship's cove – have been allowed to deteriorate and/or be shuttered. As of May 1, 2025, the COB has laid off its waterfront security monitors, making recreational usage **less safe and secure.** These monitors cost $100,000/year.

These points also illustrate overlaps in project scope between the ferry project and the WSP. The spatial, policy and operational requirements of the ferry service impede affordable recreational opportunities, as noted in the parking studies, as would a WSP design focus to attract mainly ferry patrons. Data shows that riders in the WETA ferry system tend to be high-income. Serving the high-income segment of population while lessening services to others will transform the waterfront's value as a cultural and affordable public bluespace recreational resource into a transportation hub supporting mainly a high-income ridership profile.

Figure 1: Image of east dock in South Sailing Basin, closed in February 2025. Cost of repairs estimated at $250,000 are unfunded.

The EIR itself should consider that the proposed facility would be the **only WETA ferry terminal in the WETA system within a long-standing nature-based public park** where water-land recreation is an interconnected and highly-prized amenity. Compare this concept to the locations of other WETA ferries:

- Alameda/Oakland ferry – within Oakland's Inner Harbor and shipping lanes for Port of Oakland, next to barge docks and naval ships
- Mare Island and Vallejo terminals – built in an unused location around Mare Island naval base and shipyard within the Mare Island Strait at mouth of Napa River. The land has long been dominated by housing development and the naval base.
- South San Francisco – by an industrial location within an existing Marina near the airport
- Richmond – site of former Ford factory and WWII shipbuilding site
- Alameda Seaplane Lagoon – within a decommissioned naval base
- Harbor Bay – the terminal serves the housing development and businesses around Bay Farm Island that closely abut the shoreline
- San Francisco terminals – at preexisting marine terminals and piers within industrial sites

At none of these ferry terminals is fishing, swimming, sailing, boating, and other windsports a dominant activity on the water as they are at the Berkeley waterfront. **Those venues are already environmentally degraded:** a large-scale ferry there does not displace the pattern of park usage in "Berkeley's backyard," nor add substantially to environmental damage. As currently conceived, the Berkeley pier-ferry plan attempts to

allow for recreation with what would be the only intentionally dual-use pier in the WETA system. Unfortunately, many of the project elements listed are **incompatible with existing patterns of recreation.**

The Bay Conservation and Development Commission (BCDC) incorporates into its goals and mission **social equity in shoreline public access** (BCDC, 2020). In October 2019 the agency amended the SF Bay Plan to incorporate issues of cultural diversity of the waterfront and environmental justice considerations into its policymaking process (Adapting 2019, BCDC 2019, Wasserman 2019). See in particular the BCDC SF Bay Plan (https://bcdc.ca.gov/plans/sfbay_plan.html) under Major Proposals (4), Recreation: Findings (b) (w), Recreation: Policies (1), (9), Public Access: Findings (b), Environmental Justice and Social Equity: Findings (g), Policies (3).

EIR scoping input: **BCDC policy requires protection of existing and future recreational uses and consideration of social equity.** As the proposed ferry is the only terminal in the WETA system to be located in a primarily recreational park, the only waterfront park in Berkeley, mandated as a recreational area by BCDC, the EIR must rigorously assess the cumulative and distributional impacts of these overlapping WETA ferry and WSP projects and **their ultimate impact on the waterfront as a cultural feature and affordable recreational resource, including loss of affordable bluespace recreation, both existing and future**. Specific items may include:

- *The EIR must acquire and present data on socioeconomic characteristics across all current and expected future visitation modes (via car, public transit, bike, walking) and recreational uses to the area and examine if the cumulative impacts of the proposed WETA ferry project and the Waterfront Specific Plan would "gentrify" the area such that affordable and inclusive access to green and bluespace recreation is impeded.*
- *In doing so, the EIR must identify increased costs and access barriers in terms of, for example, recreational space and amenities, recreational services, parking, access to the shoreline and water areas, and level and scope of commercial services.*
- *The EIR analysis must examine the consistency of the overall plans with BCDC policy on social equity in coastal recreation.*
- *The EIR must demonstrate that COB waterfront and park staff who maintain the area have the capacity and the directive to maintain low-cost recreational assets across areas located in the WSP and the ferry plan. As it stands, it is unclear that the COB has a sound plan to manage diverse recreational activities and public access for the life of the ferry project.*

2. Baseline comparison must be recreational demand at waterfront *with* pier and *without* ferry

City staff have indicated that the baseline for comparison is the status today of the waterfront area and pier. However, COB closed the pier in 2015 after a long history of popularity and high usage. Subsequent to closure, the city has made no new capital investments to maintain walkways, seawalls, or adjacent parking lots around the shoreline or pier. Around 2017, COB began negotiations with WETA for a ferry terminal, reviving talks reflecting a 2008 proposal to place a WETA ferry terminal at the location. Hs Lordships Restaurant closed in 2018 and remains derelict. D&E docks have been removed. While there is still extensive usage of the waterfront despite 10 years of minimal maintenance, the **feasible baseline activity should be usage of a reopened pier (to 2000' or 3000') on par with its length prior to closure,** not baseline usage after 10 years of the waterfront area falling into disrepair during COB-WETA negotiations.

Research and reports indicate a large increase in public demand if the pier were reopened and a basic functional facility maintained:

- Ken Jones, chronicler of pier fishing in California, states: "If a survey had been done over the past twenty-five years as to the most visited pier in the Bay Area, the winner undoubtedly would have been either the pier at Pacifica or this pier in Berkeley" and "For availability, transportation, ease of fishing, and facilities, Berkeley was hard to beat" (https://www.pierfishing.com/berkeley-pier/).
- Before its closure, Hs Lordships Restaurant was heavily used as an event space for large groups (e.g. school proms, Berkeley Public Schools Fund annual fundraiser, family reunions, etc.). Reviving the venue may see similar increases in demand, since few large event spaces at affordable prices exist in Berkeley.
- If the pier were reopened under the baseline condition of a somewhat shorter 2000' without the ferry, an economic valuation study by Antinori et al. (2025) predicts almost double the visitation rate for fishing over future expected visits to the shoreline along Seawall Drive.

COB 2021 states that replacement solely of the pier with a 2000-foot pier would cost $26 million, and to 3000 feet, around $32-$44 million. City staff have indicated in public meetings that COB's share of the waterside costs alone for the pier/ferry project would be approximately $26 million. Therefore, a 2000-foot reopened pier facility alone, without a ferry, is a reasonable baseline, as it is the opportunity cost of the WETA/COB pier/ferry project. Even as WETA and COB update all cost estimates to 2025 dollars across all projects, as long as all costs scale relatively equally, this fact would remain.

EIR scoping input:

The EIR must take as a baseline the following conditions: Estimates of level and range of usage for recreation and other non-ferry visitation should the original pier be retrofitted/replaced and reopened to a length of 2000', and with at least the following baseline amenities repaired/reopened:

- *Tenant activity for Hs Lordships location*
- *Street and walkway repair of Seawall Drive*
- *South Cove East Dock repaired*
- *D&E dock replaced*

In doing so, the EIR must clarify whether the proposed ferry terminal and ~500' pier with ~500 foot pier extension adequately accommodates historical, existing and future expected recreational usage as compared to at least a 2000' pier with the amenities listed above.

3. Impact on recreational and subsistence fishing

Before its closure in 2015, the pier was one of the most popular fishing venues in the Bay Area. It hosted fishing derbies like the "mudfish" and kids' fishing derbies. Closure eliminated or displaced this activity to other piers. Fishers continue to visit the area along the shoreline (which requires a license) as opposed to pier fishing, which does not. According to a recent survey analysis from 2021 to 2023 (Antinori et al. 2025), 77% of a random sample of shoreline anglers fished in Berkeley prior to COVID, implying a long association with the area, and 61% said they prefer to fish in Berkeley in comparison to other locations. In addition, 55% reported fishing for consumption needs. Other locations like the piers in Pinole and Antioch are not substitutes for fishing at Berkeley but appear to be complementary assets, with fishers traveling north and south along I-80 (Antinori et al., 2025, p. 23) to these fishing spots.

Because pier fishing does not require a license, it is especially attractive to low-income anglers. For example, Quimby et al. (2020) reported that in a study of pier fishing in generally wealthy Santa Barbara, California, 88% reported annual household income below the state median and 73% were non-white. Further, the study of Los Angeles pier fishing by Stevenson et al. (2012) found that the majority identified as persons of color, fished *only* from piers, and spoke English as a second language. Likewise, many anglers who continue to fish the Berkeley shoreline are lower- to middle-income (Antinori et al., 2025). This same study also projects an increase in angling visits should the Berkeley pier reopen to even just a length of 2000' *without the ferry*, of 70%, 88% and 114% for low, middle, and high income anglers, respectively.

The environmental economics literature is replete with studies that estimate the value of angling trips for recreational fishing. For example, Pendleton (2011) estimated a value of $10 to $100/day (p. 156), and from $34-$536/ trip with charter boat fishing being towards the high end (Pendleton and Rooke, 2006). California is second only to Florida in percentage of population that participates in marine recreation (Pendleton and Rooke, 2006). A recent study based on shoreline fishing at Berkeley puts the value at $78 per trip, considering that the average shoreline fisher travels 24 miles one way from their home to the Berkeley waterfront solely to fish. In springtime, sportfishing boats and private boats go out into the Bay inside the Golden Gate bridge to fish for halibut. According to a Barrientos et al. (2017) report on recreational benefits for the California halibut recreational fishery, based on party/charter/private/rental fishing, Berkeley is the highest valued port in northern California and most frequent port of embarkation for halibut fishing for all of California.

Sources of Berkeley-specific fish reports and species caught off the pier near the shoreline, along the existing (previously opened) pier, and from sportfishing boats leaving out of the Berkeley marina include:

1. BerkeleyMarina_baitntackle: Instagram posts on regular basis from the marina's bait shop show catches from nearby Berkeley waterfront locations
2. California Dawn sportfishing Facebook page: https://www.facebook.com/californiadawnsportfishing/
3. Golden Eye 2000 sportfishing Facebook page: https://www.facebook.com/goldeneye2000sportfishing/

Although the WETA and WSP plans mention adding much-valued fishing amenities like fish-cleaning stations and seats to the proposed pier extension, they include elements with potential to reduce fishing as a recreational and subsistence activity. Yet, **the project makes practically no reference to nor includes data on fishing as a potentially displaced activity with social equity consequences.**

EIR scoping input for angling impact:

- *Incorporate existing reports and studies on shoreline and pier fishing relevant to the Berkeley waterfront area to value changes in visitation rates for fishing and compare baseline condition of 2000' pier without ferry and the dual use ~1000' pier with ferry and design-specific 400' breakwater.*
- *The 400' breakwater in the ferry plan is designed to service the ferry in sheet-pile cement design, which inhibits fish migration and spawning. The design encourages siltation and therefore requires additional dredging over time. The*

EIR should assess specifically the impact of the breakwater design and maintenance on fishing catch rates over the lifetime of the project.

- *Examine potential safety risk and deterrent on fishing demand of crowding on a dual-use pier for the first 500' of pier accommodating ferry passengers and recreational/subsistence fishers.*
- *Examine the impact of parking fees and access barriers in the WSP and ferry plan.*
- *Verify consistency of plan with BCDC policies on social equity with regard to fishing activity.*
- *Compare the baseline (at least) 2000' pier which accesses deep water historically prized by fishers visiting the Berkeley pier to the ~500' recreational pier extension to the proposed ferry pier and breakwater.*
- *Assess impacts on recreational/subsistence fishing of dredging along the pier and ferry route throughout project lifetime.*
- *Assess noise and traffic from ferry operations that would reduce catch rates and therefore the expected value of an angling trip to Berkeley.*
- *Expand analysis of the above to cover all seasons, not just a single point in time, to capture fishing effort which follows migration patterns of targeted fish species.*
- *Expand analysis to include a cumulative impact on above for the built-out ferry system beyond the proposed project outline.*

4. Fish habitat

While the comments in this section overlap with the section above, we attempt to isolate and expand on impacts the biological resources themselves. The bay waters around the pier prior to 2015 are known as spawning grounds for some fish species.
Fish populations are also migratory and seasonal, and interact with other parts of the bay ecosystem. A number of plan elements could negatively affect fish habitat in the area:

- Dredging to accommodate a large vessel alongside the pier close to shore (within 500') plus initial construction and ongoing maintenance could interfere with all fish populations.
- An estimated 16 morning and 12 afternoon weekday crossings between Berkeley and San Francisco alone, plus 14 crossings on weekends and additional crossings for the Berkeley-Larkspur route, would create additional turbulence and noise, interfering with fish populations as well as angling (COB 2021 Feasibility Study).
- The original WETA plan called for a diesel ferry, while electric ferries were mentioned later in the process. Uncertainty remains whether an electric ferry

would accommodate the natural conditions of the Berkeley pier, which experiences high winds and waves during much of the year.

EIR scoping input: *EIR should assess impacts on all fish and marine species that are part of the ecosystem in the path of the proposed WETA ferry with respect to:*

- *New and long-term maintenance dredging*
- *Siltation from a sheet pile breakwater that interferes with halibut and other fish spawning grounds and habitat*
- *Turbidity/turbulence and noise from the San Francisco, Larkspur and other routes in the plan*
- *Ship strikes*
- *Light pollution*
- *Diesel versus electric vessels*

5. Dredging for WETA ferry project is new dredging

The area proposed for the ferry route includes a federal navigation channel under the Army Corps of Engineers. However, the channel is not dredged by the Corps, as it is not considered a critical navigational location. Nor has it been dredged in possibly 50 years or more. **The area proposed for the ferry dock has not been dredged recently and should be considered new dredging.**

The Berkeley Marina was partially dredged under a recent project permitted by the Corps. The intended area is shown in the figure below. But it does not include the channel proposed by the ferry route. Moreover, the area covered in the diagram was not fully dredged.

Figure 2: Dredging area map for Berkeley Marina project

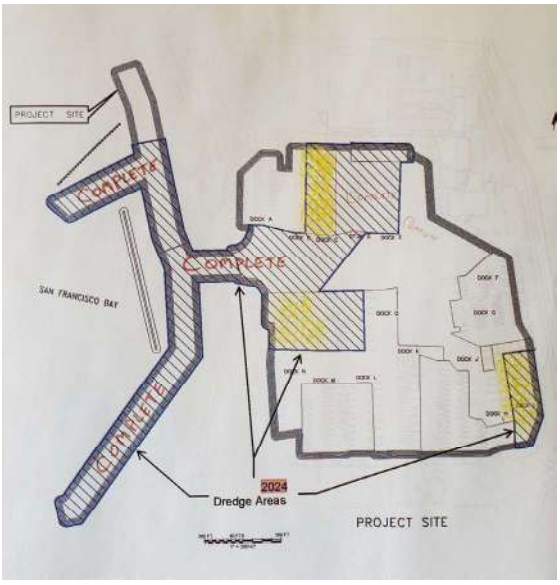

Figure 3: Areas actually dredged (Berkeley harbormaster office)

Figure 4: Areas required to be dredged and staged under the WETA ferry project (NOP of EIR, COB).

The area proposed for the ferry terminal and for the ferry service routes were not dredged. The Army Corp of Engineers website at https://www.spn.usace.army.mil/Missions/Regulatory/Public-Notices/Article/3655212/spn-2005-299690-berkeley-Marina-dredging/ shows a Marina dredging project in 2024. Dredging was focused inside the Marina and the Marina entrances.

EIR scoping input: *This is not Corps maintenance dredging nor is it COB maintenance dredging. Any dredging for the ferry project should be considered new dredging and treated as such under the rules and regulations of BCDC, CEQA, the Army Corps of Engineers and any other agency overseeing dredging in the Bay.*

6. Characterization of alternatives

a. Location alternatives must be adequately assessed

The only alternative examined by the WETA ferry plan is a site innermost in the Berkeley Marina near an old slab of concrete that once served as a ferry dock (aka the Old Ferry Pier). The last time this was used for a ferry was in 1989 by the Red and White Fleet for about six months after the earthquake, after which it suspended service **due to lack of ridership**. This location is not viable as an alternative, and acts a **"straw man"** in the analysis as currently structured. During public meetings, the city only offered as alternatives differences in breakwater design of the project.

Several feasible alternatives exist which have not been analyzed. One is the previous D&E dock location near the Hornblowers docks and the Doubletree Hotel. Another is the Hornblower docks themselves, in underused space. Third are docks currently used by the Genentech and previously the Tidelines ferries, which closed during the pandemic. The latter is a central location in the Marina and adds only two minutes' travel time to San Francisco, based on the Genentech ferry departures/arrivals, excluding docking maneuver time.

In addition, an in-harbor dock reduces need for new dredging, and thus marginal environmental impact, as the Marina undergoes maintenance dredging regardless. As such it possibly reduces Berkeley's cost of Marina maintenance because the needed dredging costs could be shared over the years with WETA, and thus provide a more viable economic pathway for ferry service.

EIR scoping input:

- *EIR scoping should integrate the ferry project with the WSP and include examination of options to access a central in-Marina facility.*
- *Specifically, the EIR must assess, as a docking location alternative, a central location within the Marina, such as the previous D&E docks, Hornblower docks or the K docks.*

Figure 5: Concrete slab inside Marina just above red traffic dot serviced old ferry, and is innermost location. D&E dock location is much closer to entrance, out of sight in image but on far right about halfway up. K dock extends from the harbormater's office in center of marina. The Hornblowers dock by the hotel on far right (not shown) in the marina. Source:https://berkeleyca.gov/your-government/our-work/capital-projects/waterfront-specific-plan

b. Alternative scale of ferry should be included

Current ridership demand estimates for the WETA Berkeley-SF are 4000, using a 400-passenger ferry, according to WETA business plan documents. Several indicators suggest the WETA ferry may not reach this level of usage. Public transit demand is down across the Bay Area systems including BART. About 60% of respondents in a COB questionnaire said they would never use the ferry to commute. For leisure, 56% said they'd never use it or use it less than 10 trips annually. **There is a real danger that the envisioned large-scale ferry with about 28 crossings per day would be mainly empty.** Stranded assets would pose a considerable cost to WETA and Berkeley, as well as having serious environmental impacts.

A reasonable alternative of a smaller scale ferry service must be included in the EIR. A smaller ferry would result in less cost, should demand predictions collapse. Smaller scale service (and e.g. docking within the Marina) could reduce the financial burden on Berkeley and at the same time fit demand patterns more accurately. However, smaller scale ferries have not been considered in planning as alternatives.

EIR scoping input:

- *Examine costs and environmental impacts of an alternative smaller-scale electric ferry, say, for example, a 150-passenger ferry, as a feasible alternative to the current plan and assess the difference in environmental impact.*
- *Data on current usage by Genentech ferry and previous usage of Tidelines ferry ridership must be made available publicly for the report for a feasibility comparison of a small commuter ferry service operating in Berkeley.*
- *Data on the COB questionnaire must be included in the EIR and reconciled with WETA's expansive ridership projections.*

7. Impact of tree removals

The Marina area faces the mouth of the Golden Gate, referred to as "The Slot" (see graphic below). Existing large trees provide valuable wind relief to recreational visitors in the park for land-based activities like picnics and park events. They also shelter half of the South Sailing Basin, which supports children's water sports training. Therefore, removing large trees should be evaluated in terms of potentially decreasing the value of the park for recreational visitors, as well as air quality and wildlife habitat. For example, close to the pier, large trees are the roosting location for the resident wild turkeys. Hummingbirds nest in trees in Shorebird park. The white-tailed kite and osprey hunt in Shorebird Park and south cove waters.

EIR scope input: *Include analysis of tree removal impact on aesthetics, useability, wind protection and bird and animal habitat in the area.*

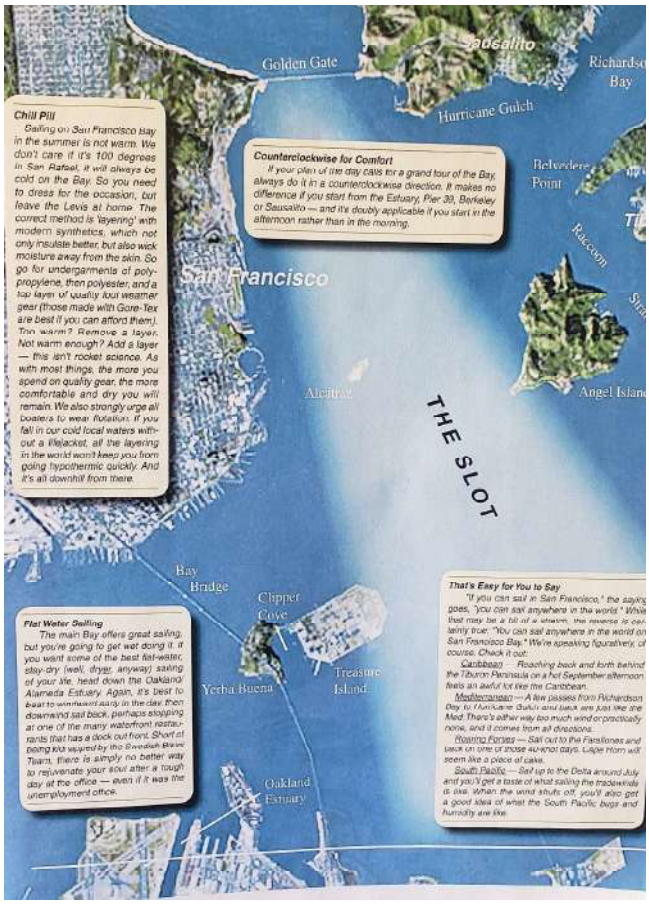

Figure 6: Graphic of "The Slot" wind pattern engulfing Berkeley waterfront and pier (bottom).

8. Ferry parking management

While this section overlaps with our first section on the waterfront as affordable public access and cultural resource, here we emphasize the particular impact of ferry patron *parking* on the Berkeley Marina as a major concern for equity, recreational, and land use. The parking study introduces paid parking (currently free) to recreational users. It forces them to park farther from Marina parks and shorelines. For many, visits to the project area and waterfront are intimately tied to access via private vehicle as well as public transportation. **Sailors, windsurfers, wingers, kayakers, fishers, families, guardians with children at the playgrounds, dog walkers, picnickers and others, crucially, cannot pile considerable amounts of gear, children, or animals aboard the 51 bus. Thus, public parking remains critical to many who visit. A total of 16% in the Kittleson intercept survey said they cancelled trips to the Marina because they could not find parking.**

Bus service to support ferry ridership is mentioned in the ferry parking study. However, consultants noted the limited utility of buses for ferry patrons. The Kittleson study notes in its case studies that AC Transit discontinued shuttle service to the Seaplane Lagoon WETA terminal due to low ridership, and that AC transit service to the Harbor Bay ferry terminal currently has few users.

It is unclear if and how Berkeley officials will fulfill their statutory obligation to keep ferry riders from usurping recreational users' parking. Past experience with Tidelines and Genentech ferries shows **that the city did not succeed in getting ferry patrons to park outside of the South Cove recreational parking lots, raising doubt as to the city's motivation and/or ability to meet its BCDC obligations to preserve recreational parking and access.**

The recent parking study addendum also calls for expanding ferry patron parking to Marina Boulevard and the Skates parking lot. This balloons the scope of the project location as noted in the NOP. This proposal overlaps with the COB Waterfront Specific Plan, which has not been completed, and is compiled independently from the pier/ferry project even though the pier has historically been the central feature of the Berkeley waterfront.

The 315-space Seawall Drive lot was closed in 2018 to deal with a homeless RV encampment, and has been mostly closed ever since. **This was a major lapse in the city's responsibility to maintain public access.** Now the Berkeley Water Transportation Pier Ferry Project intends to devote the entire Seawall Drive lot to ferry parking. This will usurp Seawall Drive parking for people who fish or walk on the pier, which is more than ironic, given that this expensive project was presented as a way to reestablish the pier. Also usurped will be parking for new facilities at Hs Lordships restaurant site, parking to serve the southern Shorebird Cove picnic sites, and the boardsailing and swimming launch at Hs Lordships Cove, to say nothing of overflow parking for the heavily impacted South Cove parking lots.

EIR scoping questions:

- *Include analysis of what the city has done in the past when recreational parking was displaced by the Genentech and Tidelines ferry and plans for future, more effective enforcement capacity if large-scale ferry service is implemented.*
- *Expand project location to include all locations noted in the addendum to the parking study.*

- *Examine cumulative and distributional impacts of parking from the WSP and the pier/ferry project on the public's recreational use, affordable access, and the extant legal land use designations.*

Figure 7: South Cove west parking lot on Saturday, May 10, 2025 at 1pm, with east lot in background. Both are almost entirely used by recreational visitors. Paving the lot as planned will significantly reduce the number of parking spaces. The Kittleson ferry parking study attempts to plan for ferry parking in conjunction with the WSP. *(Photo: C. Antinori)*

9. Bird nesting and feeding grounds

The waterfront area is home to many birds in Cesar Chavez Park (https://ebird.org/hotspot/L285281/bird-list) and the Sylvia McLaughlin State Park, part of the Eastshore State Park system. Resident bird populations include ospreys who feed in nearby waters.

EIR scoping input: *The* ***cumulative*** *impacts of the WSP and the ferry project need to take into account increased noise, increased traffic, tree removal, new and maintenance dredging, ferry operations, and reconfiguration of parking patterns on bird habitat, over the course of migratory and seasonal cycles rather than at one point in time. In doing so, it should:*

- *Document all bird species in area, migratory and resident*

- *Use eBird "hotspots" and other sources to name the birds documented in the area, potentially up to to 200 species. (https://ebird.org/hotspots)*
- *Consider the loss of trees at Shorebird Park that support hummingbirds (see section 7)*
- *Incorporate information that the burrowing owl is currently under consideration to be added to the Endangered Species list of the State of California (https://wildlife.ca.gov/News/Archive/cdfw-seeks-public-comment-related-to-western-burrowing-owl)*
- *Include bird species identified at the project location that are among the CA Species of Special Concern and Fully Protected Species. This includes the White-Tailed Kite and osprey (https://wildlife.ca.gov/Conservation/SSC/Birds)*

10. Clarify economic factors to contextualize project feasibility

As BCDC considers environmental impacts overall and weighs any opportunity cost for *not* building the large-scale WETA ferry, realistic information should be provided about those opportunity costs. WETA documents offer no predictions, nor conjectures, of secondary economic benefits for Berkeley. Consultant reports suggest minimal economic benefits. The Keyser Marston report suggests very modest contributions to the Marina Fund which may generate only up to 10% more of any revenues the city receives from food and beverage consumer spending (Keyser Marston, 2021, pp. 8-9). The report **extends only aspirational comments, e.g. "It is hoped that a large-scale ferry with weekend service will attract an additional hotel" (Keyser Marston, p. 9). The WETA ferry terminal at Jack London Square, Oakland, has failed to prevent a large vacancy rate in commercial rental space.** Oakland's Waterfront Hotel which closed in January 2025 had 145 rooms, just steps away from this terminal.

EIR scoping should include: *Currently available estimates of the secondary economic benefits so that reviewers may weigh the proposed project against its environmental and human costs. The scoping should compare this against the baseline of 2000' pier without ferry.*

11. Compatibility of electrification and emergency service

The waterfront area is land filled for recreational purposes. As fill, the waterfront area servicing the dock may not be stable in an earthquake. The ferry dock is described as serving an electric ferry *if feasible*. In such a case, an electrification facility to serve electric zero-emission ferry vessels may not withstand natural disasters such as earthquakes, tsunamis or violent storms.

Storms also come from north and south throughout the year, making navigation in “The Slot” through the Golden Gate (see above) more challenging. Any final recharging station and breakwater design compatible with supporting electric ferry service year-round and in emergencies should be confirmed within the EIR. With this information, environmental impacts noted above (e.g. dredging, aesthetics, recreation, habitat) can be more clearly assessed.

EIR scoping input:

- *To properly understand the environmental impact of the above, the EIR must provide specifications on infrastructure to serve an electric ferry vessel in an emergency. If it cannot, then it must delete references to emergency response in the scope of the project.*
- *If it specifies electrification infrastructure to withstand natural disasters, then it should specify whether the ferry service will be able to handle emergency vehicles or just personnel. Include technical specifications of breakwater design to support operations year-round and in emergencies.*

Thank you so much for this opportunity to respond. Please let us know if we can answer any questions about these comments.

Re: Comments on Notice of Preparation of EIR for Berkeley Ferry

Dear Ms. McNulty:

Citizens for Eastshore State Park make these comments regarding the NOP of EIR for the Berkeley Ferry. We realize that we may be a few hours late, but trust that our short lateness (three to four hours) will not be considered prejudicial since the consultants will not be reviewing any documents until sometime tomorrow after 9:00 a.m. Moreover, our comments simply adopt the comments of the Sierra Club, SPRAWLDEF, and Save the Bay as though they are fully set forth herein.

Sincerely yours,

Norman La Force
Vice-President

RE: Draft EIR Scoping Comments for Berkeley Pier Ferry Project

Dear Liza McNulty,

Thank you for the opportunity to submit comments related to the scoping of environmental issues to be included in the EIR for the Berkeley Water Transportation Pier Ferry. We were very happy to see that the ferry fleet will be all electric. Zero emissions will reduce some direct impacts to nearby wildlife while helping reduce climate impacts.

Golden Gate Bird Alliance is a non-profit organization based in Berkeley whose mission is to inspire people to protect Bay Area birds and our shared natural environment. For over 100 years we have been a leader in Bay Area wildlife conservation, protecting birds and their habitats. Our 7,000 Bay Area members and supporters envision a world where birds, wildlife, and all people flourish together.

We have reviewed the Notice of Preparation for the EIR, and request that the following issues be specifically addressed in the EIR:

- Impacts of increased boat traffic to waterbirds that use the waters adjacent and just offshore of the proposed ferry terminal, especially during winter when waterbirds are most abundant in the area. Additionally, spring and fall periods should be studied for species present during these critical migration periods. The offshore areas are critical overwintering habitat for many species of ducks, grebes, pelicans, terns, gulls, and other waterbirds.

- Wave impacts from the proposed ferry activities on adjacent shorelines that support shorebirds and mudflat habitats, including any potential interactions of wave impacts and future sea-level rise on these habitats.

- Direct impacts of the proposed dock, including shading on subtidal habitats.

- Direct impacts of dredging, including the proposed frequency of dredging, as well as the beneficial reuse of dredged material within the Bay.

- Impacts to existing bird and wildlife habitat adjacent to the pier and parking area (e.g., tree removal or other impacts to these areas).

- Opportunities to use native plantings throughout the project.

- Increased contaminant runoff from the parking lots associated with the ferry terminal.

Additionally, although the Monterey Cypresses in the existing parking area are not native to the Bay Area specifically, they are native to California and commonly used in native landscaping efforts. Despite being mature to senescent and perhaps not the most diverse vegetation type, these trees have long provided shelter for species such as Black-crowned Night-Herons and Pygmy Nuthatches. We hope the EIR's potential project alternatives will look at the possibility of adding additional terrestrial bird and wildlife habitat, using native plants to support greater biodiversity of birds and insects.

Thank you for your consideration of these scoping elements in the environmental review process. Please do not hesitate to reach out for clarification or if we can provide additional details.

Sincerely,

Glenn Phillips
Executive Director

Subject: BWTPF EIR scoping comments

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Lisa McNulty,

We are frequent swimmers at the Berkeley Marina and members of the QT Selkies Gay for the Bay—a community of nearly 225 individuals who swim throughout the Bay Area, including locations in Berkeley, Oakland, Richmond, Pinole, Albany, Alameda, and San Francisco.

We've been following the city's proposal to redevelop the marina to accommodate ferry service, but it has been challenging due to the lack of accessible public information. I am writing today to express our concerns about this development and lay out how our swimmers currently use the marina.

Swimmers require three essential things: a safe entry point, clean water to swim in, and convenient parking. Our community typically enters the water near the seawall adjacent to the former Hs Lordships restaurant. This location is vital, especially during low tides when the sailing basin becomes too shallow for safe swimming and launching—conditions that occur roughly half the time. And seeing as this location is only one of two in the East Bay that can be accessed regardless of tide we are very attached to its existence. We, along with other waterfront users like anglers, walkers, paddlers, and windsurfers, rely on parking along the seawall. We are concerned that ferry riders will dominate these spaces.

We've been informed by other swimmers who attended the March PRWC meeting that they were troubled by the city's claim that parking would remain sufficient for all users. The data backing this assertion appears selectively chosen. Specifically, page 22 of the report reveals that parking surveys were conducted at 10am and 8pm—times not reflective of peak use (typically 2pm–4pm)—and focused more on overnight vehicle stays than daytime activity.

The assumption that all marina parking is interchangeable overlooks practical realities. After a cold swim, it's unreasonable to expect individuals to walk half a mile or more across the marina to reach distant lots.

We're deeply concerned that increased commercialization of the marina could reduce access to free, low-barrier recreational opportunities that draw an exceptionally diverse group of users. We believe the current planning is being guided by flawed data and that local residents and regular recreational users have not been adequately included in the process.

We urge the BCDC to call on the city to conduct a more thorough and accurate analysis of parking and waterfront access, and to commit to protecting the public amenities that make the Berkeley Marina such a vital recreational space.

Thank you for your commitment to equitable access to the Bay for all.

Sincerely,
Robin Mangini, MPH
Co-Admin of the QT Selkies Gay for the Bay

RE: Scoping Comments on the Notice of Preparation for the Berkeley Waterfront Specific Plan and Ferry Project EIR

Dear Ms. McNulty,

Thank you for the opportunity to provide comments on the Notice of Preparation (NOP) for the Environmental Impact Report (EIR) for the Berkeley Waterfront Specific Plan and Berkeley Ferry Project. For over sixty years Save The Bay has worked to protect and restore San Francisco Bay for people and wildlife, including stopping the City of Berkeley's plan to fill another two square miles of San Francisco Bay. These comments are offered to assist the City of Berkeley as the lead CEQA agency to prepare a legally adequate EIR that informs public discussion on the best project alternative that avoids significant environmental impacts.

The City of Berkeley proposes to develop a ferry terminal and restore the historic Berkeley Pier to meet regional transit needs and enhance public access to the waterfront. This project EIR must include full evaluation of the project's environmental impacts, as well as an evaluation of all legally required alternatives, in accordance with the California Environmental Quality Act (CEQA). We highlight below a few of the many considerations the EIR must address.

The project's proximity to three major public open spaces—Shorebird Park, Adventure Playground, and McLaughlin Eastshore State Park— requires detailed focus on impacts to recreation and transportation. Areas of the Bay that have been filled for recreational purposes should remain in that use and not be converted for commercial development, consistent with provisions of the McAteer-Petris Act and regulations of the San Francisco Bay Conservation and Development Commission (BCDC). Save The Bay and its founders (including Sylvia McLaughlin for whom Eastshore State Park is named) supported the placement of fill in the Bay in Berkeley only for recreational purposes, as consistent with BCDC's statute.

BCDC's 1967 permit to fill an area of the bay and expand Berkeley marina stated that the purpose of the fill was to "…permanently establish public access and recreational use for a sizable part of the Berkeley shoreline." BCDC issued the permit relying on the statements of city officials including Sylvia McLaughlin, who wrote that "Berkeley's portion of the shoreline of San Francisco Bay should be reserved exclusively for public recreation and its related public uses." Berkeley citizens also approved a 1968 referendum, titled the "Berkeley Public Parks and Open Space Preservation Ordinance," establishing their commitment to preservation of parks and open space, codified as Ordinance No. 5785-N. S. The definition of parks and open space protected by that ordinance clearly applies to the areas that would be altered by the project described in this Notice of Preparation.

The EIR should also address whether the project and any of its alternatives are consistent with BCDC's adopted recreational policies and maps that protect existing recreational amenities including the bay fill in the project area and the Berkeley Marina, which is designated as a waterfront park priority use area in BCDC's Bay Plan. BCDC's Recreational Policy 9 states:

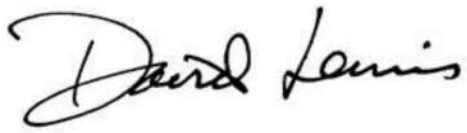
> "Ferry terminals may be allowed in waterfront park priority use areas and marinas and near fishing piers and launching lanes, provided the development and operations of the ferry facilities do not interfere with current or future park and recreational uses, and navigational safety can be assured. Terminal configuration and operation should not disrupt continuous shoreline access. Facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons. Shared parking arrangements should be provided to minimize the amount of shoreline area needed for parking." (San Francisco Bay Plan, Policy 9)

The EIR should evaluate whether the proposed project and any of its alternatives can be consistent with that ordinance, BCDC's permit, and other local, state and federal laws and regulations.

The Berkeley Waterfront receives up to 300,000 visits per year and includes many shoreline access points in the Bay Area. Any effects on these public resources or on shoreline recreational access will negatively impact the local population and the public throughout the region. With rising temperatures due to climate change, demand for access to McLaughlin Eastshore State Park's shoreline recreation areas will continue to increase. The EIR must analyze how the project's proposed infrastructure to support ferry service – terminal facilities, parking, shoreside infrastructure for ferry boats, and more – that may provide benefits to some individuals who ride the ferry, will create negative impacts on the many park users who do not use that service. Those impacts

include increased traffic through park areas, barriers to shoreline access, disruption of views, and more.

Given all of the significant potential impacts to people and wildlife, including those explicitly protected by local, state and federal laws and regulations, the EIR should evaluate alternatives that do not involve the use and alteration of land reserved for recreational purposes. Filled land in the Bay that pre-dates the establishment of BCDC provides the City of Berkeley broader discretion to apply uses consistent with the Public Trust Doctrine but not restricted by BCDC permits. Berkeley's marina basin already provides about 1,000 recreational boat slips and additional areas for charter boats including the Genentech ferry and Hornblower charters. This EIR should include alternatives that consider this and other sites that require little or no new filling and dredging of the Bay, elimination of current recreational parking and other impacts.



The project's location on the Bay shoreline, near sensitive wildlife and habitat, also necessitates the study of impacts and alternatives that protect water quality and pollution impacts on aquatic and terrestrial species and on people who use the area, including swimmers, windsurfers, kayakers, sailors and others. The EIR should assess impacts from and alternatives to construction activities on shore and in the Bay, including dredging, placement of fill and installation of infrastructure. Changes to ground permeability that affect stormwater runoff pollution should also be assessed and the EIR should identify how alternatives will avoid these impacts and mitigate any impacts that are unavoidable.

Save The Bay is deeply invested in helping Bay Area communities build resilience in the face of climate change. This EIR must evaluate the project's impact on local air quality and greenhouse gas emissions and should be designed for long-term adaptation to sea level rise, including incorporation of nature-based solutions along the shoreline to protecting infrastructure and ecological resources from flooding. The project should avoid shoreline development that will necessitate hard armoring of the shoreline that risks additional negative environmental impacts including erosion and loss of public access in the future. Alternatives should prioritize ways to work with nature, rather than against it, in equipping shoreline development to withstand long-term sea level rise.

In summary, the EIR must evaluate a full range of alternatives, including the least environmentally damaging feasible alternative. Alternatives should aim to avoid impacts to public trust resources, water quality, greenhouse gas emissions, and shoreline resilience, and minimize any unavoidable significant impacts. We look forward to continued engagement in the environmental review process and thank you for considering our comments.

Sincerely,

SAVE THE BAY

Re: Comments on Notice of Preparation of EIR for Berkeley Ferry

Dear Ms. McNulty:

The Sierra Club California State Parks Committee and Bay Alive Committee provide the following comments regarding the issues and matters that the Berkeley Ferry EIR should address. You have already received comments from the San Francisco Bay Chapter Northern Alameda Group. These comments are in addition to those comments.

The Sierra Club is deeply concerned about the future health of the San Francisco Bay, its ecosystems that provide services to us all, and the wildlife that the Bay supports. We are committed to the protection and enhancement of our Bay's ecosystems and habitats. As sea levels rise and atmospheric river storms become more prevalent, the Berkeley shoreline becomes more vulnerable to wave run-up and flooding. In addition, the Bay Conservation and Development Commission (BCDC) recently passed the Regional Shoreline Adaption Plan (RSAP) Guidelines which will require cities like Berkeley to prepare their own Subregional SAP in compliance with the requirements of the BCDC RSAP Guidelines in order to deal with the projected rise responsibly and constructively in Bay waters.

The access road from the urban area of Berkeley to the Berkeley Marina where the ferry terminal would be constructed cuts through portions of the McLaughlin Eastshore State Park (MESP). The access road is adjacent to the Conservation area in the Berkeley Meadow of the MESP. The ferry terminal and other proposed infrastructure changes would also be adjacent to the protected waters of the South Basin Cove of the MESP. The water areas around the proposed terminal site also include the North Basin Cove of the MESP. Under the MESP general plan the North Basin Cove has special seasonal and other protections for rafting and migrating birds. The proposed ferry may have impacts on bird species in those waters.

In light of these physical constraints, our review of the proposed ferry terminal and mixed-use development at the Berkeley marina raises substantial environmental and infrastructural concerns.

Construction Impacts and BCDC RSAP Guidelines

The construction of appropriate nature-based shoreline infrastructure, to minimize impacts, may require additional setbacks. The environmental impacts of construction and operation of a ferry terminal, parking lot, and access road should be analyzed and either minimized or mitigated. BCDC's RSAP guidelines will undoubtedly also influence how this shoreline infrastructure should address sea level rise and utilize Natural and Nature Based solutions (NNBS) as part of the RSAP. In addition, the proposed development site is on Bay fill and as sea levels rise, groundwater is also expected to rise. These Bay fill soils are prone to liquefaction in the event of earthquakes which we all know are inevitable in the Bay Area. This potential liquification should be addressed.

Issues Concerning Alternative Development Sites

The EIR must analyze reasonable alternatives. An alternative that is not reasonable and that should not be used is for a ferry terminal at the Albany Golden Gate Fields racetrack site. The track is now closed. The Sierra Club has called for the entire Golden Gate Fields site to be acquired and added to the MESP. The Club has also stated that after acquisition over time, the site should be restored to its original wetland and marsh that covered most of the site in the early 1900's before it was filled for the track. This restoration would further BCDC's goals of restoring and increasing wetlands and marsh in the Bay thus creating a resilient shoreline using NNBS which is one of the primary goals of the BCDC RSAP.

Bay Fill and Groundwater Rise

The proposed ferry includes parking and other structures that are situated on bay fill, which is prone to liquefaction in seismic events. Rising sea levels will also elevate groundwater levels, further destabilizing these soils. This poses significant risks for the construction and long-term viability of the site for a ferry terminal and need to be fully analyzed in the EIR.

Environmental Impact of Ferry Terminal

The construction and operation of the ferry terminal could detrimentally impact nearby sensitive habitats especially the Conservation area on the Berkeley Meadow in the MESP, and the North and South Basins. Increased boat wakes could harm migratory birds and other aquatic species. If the ferries are not electric, then ferry diesel emissions pose a pollution risk. A Water Emergency Transit Authority (WETA) study demonstrated that ferries create dead zones for waterfowl in the ferry wake zone thus significantly impacting those species. Mitigations such as slow speed requirements around recognized

rafting duck locations should be considered as mitigation requirements. Comprehensive mitigation strategies must be developed and evaluated to minimize these environmental impacts. The potential impacts on bird species protected under the Migratory Bird Treaty must be analyzed. We refer you to the attached addendum, Takegawa, John, *Effects of Ferry Traffic on Migratory Wasterbirds in the San Francisco Bay*. (Exhibit A)

Potential for private ferries

We also continue to be extremely concerned about WETA's future plans to consider allowing private ferries at various terminals. The project description includes the possible addition of special event service. It does not specifically forbid private vehicles. If private ferries (that are both scheduled and unscheduled) and water taxis (similar to calling an Uber or Lyft water taxi) are allowed to use the dock and terminal facility, this presents a significant problem. It is important to monitor and enforce speed restrictions of boats as well as to minimize the number of boats through the refuge. It has been clearly demonstrated that it is difficult or impossible to do daily enforcement of speed restrictions of private ferries or water taxis.

Additional boats, especially private ferries, and water taxis that are not obeying the speed restrictions, would cause more environmental and safety concerns including more wake waves, potential impacts on rowers and paddlers in non-motorized watercraft, shoreline erosion, and impacts on birds and other aquatic species.

Air Quality

Evaluate the impact of ferry diesel emissions on recreational users of the waterway as well as adjacent shoreline communities. If the project plan includes backup power using diesel fuel, include those emissions in the analysis.

Artificial Light at Night (ALAN)

Due to proximity to MESP and protected waters, night lights from the terminal and parking areas will be harmful to birds and other wildlife in the nearby MESP. ALAN interferes with bird reproduction, feeding and migration. Night foraging creatures will not be able to forage if lights are on at night and shine on the water. The EIR must evaluate approaches to and require minimizing ALAN and lighting and use of the site after sundown.

Noise

The EIR must evaluate the maximum decibel of the ferries and of other equipment at the project site and their impact on birds and other wildlife. Ensure that there are no private boats using the dock, especially at night, such as party boats or special event boats. Evaluate the impact of construction period

and noise including pile driving and length of construction time on adjoining habitat and species. Considering the disruption and noise during the construction period, will a significant area of this valuable wildlife habitat be no longer viable for wildlife that now consider it home?

Bird Safe Design

Bird-safe design principles are crucial for protecting avian populations, particularly in areas adjacent to wildlife refuges. These principles aim to prevent bird collisions with structures, which is a significant threat to bird safety. Structures such as buildings, windows, and other man-made objects often pose hazards to birds, leading to injuries or fatalities. Implementing bird-safe designs is essential to minimize these risks and promote a safe environment for birds, especially in areas with high bird activity.

The Migratory Bird Treaty Act of 1918 (**16 U.S.C. 703-712**) provides that it is unlawful to pursue, hunt, take, capture, kill, possess, sell, purchase, barter, import, export, or transport any migratory bird, or any part, nest, or egg or any such bird, unless authorized under a permit issued by the Secretary of the Interior. Since the areas in the MESP and in and around the proposed terminal site are used by migratory birds, the impact of the ferry on migratory birds must be analyzed.

Geology, Soils, and Seismicity

The EIR must include information on the soils at the site as well as along the only access road that gives access to the site. Soil settlement along the two mile access road indicates unstable soils.

Hazards and Hazardous Materials

Recent investigations have revealed that there are fill areas on the Albany, Berkeley, and Richmond shorelines that have toxic and hazardous materials. A thorough review of historical and current environmental data is necessary to assess potential contamination risks.

Utilities and Service Systems

The EIR must analyze the life service of existing utilities and storm water/wastewater systems. Rising groundwater may be poised to inundate portions of the buried utilities off site that are serving the site.

Transportation Issues from Increased Gas Powered Automobiles

The ferry terminal will result in greater automobile use to and from the ferry terminal. The increase in such especially from gas powered automobiles in terms of air quality and impacts from cadmium and other toxic materials found in automobile tires must be analyzed, especially as to impacts

on wildlife and habitat in the MESP. Therefore, the EIR should analyze how the impact of gas powered cars can be mitigated through increased bus service and bicycle access to the ferry terminal. See the attached March 27, 2025 letter from the Club's Northern Alameda Group to the City of Berkeley. (Exhibit B)

EFFECTS OF FERRY TRAFFIC ON MIGRATORY WATERBIRDS IN THE SAN FRANCISCO BAY

Commuter ferry routes cross valuable subtidal and intertidal habitats in the San Francisco Bay estuary that support a wealth of natural resources, including large numbers of migratory waterbirds during the winter. When new routes were proposed for the region under a new transit authority in 1999, we initiated studies to evaluate the ecological effects of commuter ferries on rafting waterbirds. The main objectives were to: 1) conduct on-board ferry surveys to assess species-specific buffer distances; 2) examine waterbird avoidance of watercraft in land-based surveys at selected areas; and 3) document distribution of waterbirds along ferry routes with aerial surveys.

On-board ferry surveys were used to determine how waterbirds responded behaviorally to the passage of a commuter ferry. Observers recorded the behavioral response (fly, dive, swim, alert posture) of waterbirds and their distance from the ferry. Surf scoters (*Melanitta perspicillata*), lesser and greater scaup (*Aythya affinis* and *A. marila*), and western and Clark's grebes (*Aechmophorus occidentalis* and *A. clarkii*) were the most abundant species found across all ferry routes, with diving ducks representing the most abundant guild. Behavior response distances ranged from 50-500 m for grebes, 30-900 m for scoters, and 60-500 m for scaup. Most waterbirds showed a behavior response within 300 m, and we used that distance to estimate the zone within which birds were affected. In addition, we used GPS tracking to determine that variation in the path of the ferries was usually 200 m. Thus, we calculated a total effect area along a ferry route from their sum or a distance of 500 m. Affected areas ranged from 2.44 to 75.75 km^2 and included 0.07-14.26 km^2 of shoals preferred for foraging (<4 m deep).

We studied the duration of disturbance of a ferry transit from land-based surveys. At selected sites, we recorded numbers and behavior of waterbirds before and after transit. Scaup densities declined after ferry transit along the Vallejo and Alameda Harbor Bay route, and scoters decreased after passage of the Larkspur ferry. However, patterns were not consistent, probably because birds were responding to several factors such as time-of-day, weather, and other disturbances. When we compared weekday to weekend surveys, we found more waterbirds along routes during the weekdays despite more frequent ferry traffic.

Aerial surveys indicated that diving ducks accounted for 85% of open water birds, dominated by scaup and scoter (90%). Numbers were highest during Nov-Dec in the North Bay, consistent in the central Bay, and lowest in the South Bay. While new commuter ferries may be beneficial at reducing vehicle traffic, they will have an effect on waterbird populations. Although they do not eliminate open water habitats, they may preclude use of it by waterbirds. Thus, our study indicated that effects on waterbirds should be considered when planning new transit routes or increasing their frequency, especially in shoal areas used for foraging.

SIERRA CLUB
SAN FRANCISCO BAY

NORTHERN ALAMEDA COUNTY GROUP
ALAMEDA ALBANY BERKELEY EMERYVILLE OAKLAND PIEDMONT SAN LEANDRO

March 27th, 2025

Mayor Adena Ishii and City Council
2180 Milvia Street,
Berkeley, California 94704

Dear Mayor and Council,

The Sierra Club North Alameda County Group strongly encourages Berkeley to take a more holistic, non-single occupancy vehicle-centric approach to planning for future ferry passenger capacity at the Berkeley Marina. Taking steps to meaningfully promote transportation alternatives is a key step towards the city meeting its climate and emissions goals, as well as encouraging more equitable and less environmentally impactful transportation options for commuters and visitors.

The strategies put forth in the Water Transportation Pier-Ferry Project Parking and TDM Plan will only serve to encourage people to drive to the Berkeley Marina when accessing the new ferry service. Increasing parking, formalizing overflow parking locations, and improving wayfinding to and from these overflow lots and the ferry terminal are ultimately strategies to make driving easier, which will invariably lead to more driving. The phenomenon of induced demand is well-studied in transportation demand management, and its results are predictable. In addition, the cost-effectiveness of investments in bus and rail transit compared to trips by ferry that are more costly per rider strongly indicate that the City should avoid discretionary local investments supporting parking, while receiving grants and other resources developed by WETA.

Instead, we believe that the City of Berkeley should be prioritizing improvements to alternate modes of travel to and from the Marina and new ferry terminal, which aligns more closely with the city's own goals. These include:

- **Improved bicycle infrastructure and connections:** Protected bike lanes along University Ave, safer and more direct connections from West Berkeley to the Marina, and ample bicycle parking in close proximity to the terminal, in addition to well-signed connections to the adjacent Bay Trail, portions of which are already used as a bicycle commuter route, notable considering the massive new investments in offices and research facilities immediately to the south of the

Re: Comments on Notice of Preparation of EIR for Berkeley Ferry

Dear Ms. McNulty:

The Sustainability, Parks, Recycling, and Wildlife Legal Defense Fund (SPRAWLDEF) provide the following comments regarding the issues and matters that the Berkeley Ferry EIR should address.

SPRAWLDEF is deeply concerned about the future health of the San Francisco Bay, its ecosystems that provide services to us all, and the wildlife that the Bay supports. We are committed to the protection and enhancement of our Bay's ecosystems and habitats. As sea levels rise and atmospheric river storms become more prevalent, the Berkeley shoreline becomes more vulnerable to wave run-up and flooding. In addition, the Bay Conservation and Development Commission (BCDC) recently passed the Regional Shoreline Adaption Plan (RSAP) Guidelines which will require cities like Berkeley to prepare their own Subregional SAP in compliance with the requirements of the BCDC RSAP Guidelines in order to deal with the projected rise responsibly and constructively in Bay waters.

The access road from the urban area of Berkeley to the Berkeley Marina where the ferry terminal would be constructed cuts through portions of the McLaughlin Eastshore State Park (MESP). The access road is adjacent to the Conservation area in the Berkeley Meadow of the MESP. The ferry terminal and other proposed infrastructure changes would also be adjacent to the protected waters of the South Basin Cove of the MESP. The water areas around the proposed terminal site also include the North Basin Cove of the MESP. Under the MESP general plan the

North Basin Cove has special seasonal and other protections for rafting and migrating birds. The proposed ferry may have impacts on bird species in those waters.

In light of these physical constraints, our review of the proposed ferry terminal and mixed-use development at the Berkeley marina raises substantial environmental and infrastructural concerns.

Construction Impacts and BCDC RSAP Guidelines

The construction of appropriate nature-based shoreline infrastructure, to minimize impacts, may require additional setbacks. The environmental impacts of construction and operation of a ferry terminal, parking lot, and access road should be analyzed and either minimized or mitigated. BCDC's RSAP guidelines will undoubtedly also influence how this shoreline infrastructure should address sea level rise and utilize Natural and Nature Based solutions (NNBS) as part of the RSAP. In addition, the proposed development site is on Bay fill and as sea levels rise, groundwater is also expected to rise. These Bay fill soils are prone to liquefaction in the event of earthquakes which we all know are inevitable in the Bay Area. This potential liquification should be addressed.

Issues Concerning Alternative Development Sites

The EIR must analyze reasonable alternatives. An alternative that is not reasonable and that should not be used is for a ferry terminal at the Albany Golden Gate Fields racetrack site. The track is now closed. SPRAWLDEF has called for the entire Golden Gate Fields site to be acquired and added to the MESP. SPRAWLDEF has also stated that after acquisition over time, the site should be restored to its original wetland and marsh that covered most of the site in the early 1900's before it was filled for the track. This restoration would further BCDC's goals of restoring and increasing wetlands and marsh in the Bay thus creating a resilient shoreline using NNBS which is one of the primary goals of the BCDC RSAP.

Bay Fill and Groundwater Rise

The proposed ferry includes parking and other structures that are situated on bay fill, which is prone to liquefaction in seismic events. Rising sea levels will also elevate groundwater levels, further destabilizing these soils. This poses significant risks for the construction and long-term viability of the site for a ferry terminal and need to be fully analyzed in the EIR.

Environmental Impact of Ferry Terminal

The construction and operation of the ferry terminal could detrimentally impact nearby sensitive habitats especially the Conservation area on the Berkeley Meadow in the MESP, and the North and South Basins. Increased boat wakes could harm migratory birds and other aquatic species. If the ferries are not electric, then ferry diesel emissions pose a pollution risk. A Water Emergency Transit

Authority (WETA) study demonstrated that ferries create dead zones for waterfowl in the ferry wake zone thus significantly impacting those species. Mitigations such as slow speed requirements around recognized rafting duck locations should be considered as mitigation requirements. Comprehensive mitigation strategies must be developed and evaluated to minimize these environmental impacts. The potential impacts on bird species protected under the Migratory Bird Treaty must be analyzed.

Potential for private ferries

We also continue to be extremely concerned about WETA's future plans to consider allowing private ferries at various terminals. The project description includes the possible addition of special event service. It does not specifically forbid private vehicles. If private ferries (that are both scheduled and unscheduled) and water taxis (similar to calling an Uber or Lyft water taxi) are allowed to use the dock and terminal facility, this presents a significant problem. It is important to monitor and enforce speed restrictions of boats as well as to minimize the number of boats through the refuge. It has been clearly demonstrated that it is difficult or impossible to do daily enforcement of speed restrictions of private ferries or water taxis.

Additional boats, especially private ferries, and water taxis that are not obeying the speed restrictions, would cause more environmental and safety concerns including more wake waves, potential impacts on rowers and paddlers in non-motorized watercraft, shoreline erosion, and impacts on birds and other aquatic species.

Air Quality

Evaluate the impact of ferry diesel emissions on recreational users of the waterway as well as adjacent shoreline communities. If the project plan includes backup power using diesel fuel, include those emissions in the analysis.

Artificial Light at Night (ALAN)

Due to proximity to MESP and protected waters, night lights from the terminal and parking areas will be harmful to birds and other wildlife in the nearby MESP. ALAN interferes with bird reproduction, feeding and migration. Night foraging creatures will not be able to forage if lights are on at night and shine on the water. The EIR must evaluate approaches to and require minimizing ALAN and lighting and use of the site after sundown.

Noise

The EIR must evaluate the maximum decibel of the ferries and of other equipment at the project site and their impact on birds and other wildlife. Ensure that there are no private boats using the dock, especially at night, such as party boats or special event boats. Evaluate the impact of construction period and noise including pile driving and length of construction time on

adjoining habitat and species. Considering the disruption and noise during the construction period, will a significant area of this valuable wildlife habitat be no longer viable for wildlife that now consider it home?

Bird Safe Design

Bird-safe design principles are crucial for protecting avian populations, particularly in areas adjacent to wildlife refuges. These principles aim to prevent bird collisions with structures, which is a significant threat to bird safety. Structures such as buildings, windows, and other man-made objects often pose hazards to birds, leading to injuries or fatalities. Implementing bird-safe designs is essential to minimize these risks and promote a safe environment for birds, especially in areas with high bird activity.

The Migratory Bird Treaty Act of 1918 (**16 U.S.C. 703-712**) provides that it is unlawful to pursue, hunt, take, capture, kill, possess, sell, purchase, barter, import, export, or transport any migratory bird, or any part, nest, or egg or any such bird, unless authorized under a permit issued by the Secretary of the Interior. Since the areas in the MESP and in and around the proposed terminal site are used by migratory birds, the impact of the ferry on migratory birds must be analyzed.

Geology, Soils, and Seismicity

The EIR must include information on the soils at the site as well as along the only access road that gives access to the site. Soil settlement along the two mile access road indicates unstable soils.

Hazards and Hazardous Materials

Recent investigations have revealed that there are fill areas on the Albany, Berkeley, and Richmond shorelines that have toxic and hazardous materials. A thorough review of historical and current environmental data is necessary to assess potential contamination risks.

Utilities and Service Systems

The EIR must analyze the life service of existing utilities and storm water/wastewater systems. Rising groundwater may be poised to inundate portions of the buried utilities off site that are serving the site.

Transportation Issues from Increased Gas Powered Automobiles

The ferry terminal will result in greater automobile use to and from the ferry terminal. The increase in such especially from gas powered automobiles in terms of air quality and impacts from

cadmium and other toxic materials found in automobile tires must be analyzed, especially as to impacts on wildlife and habitat in the MESP.

Re: Scoping Comments to Environmental Impact Report (EIR) for the Berkeley Water Transportation Pier Ferry

Thank you for giving me the opportunity to add my comments to the following topics covered by CEQA

Land Use Planning and Recreation

Inadequate Parking Studies and Latent Demand:
This is a very important area for study and is lacking from the current report, as pointed out by various user groups and by the BCDC's DRC. The study's proposed landside improvements, plus a new pier and a hospitality development at 199 Seawall, etc. in and by themselves will attract more users. But it is also well known that these days the popularity of aquatic recreation has soared (especially open water swimming), as have other activities like birdwatching, fishing, kayaking or simply walking along the shoreline. Attention needs to be paid to quantify this.

It is challenging to assess future demand at the waterfront because so many of its popular features have been closed for so long, including the fishing pier, Hs Lordships and more recently the East Dock. The pedestrian trails are in such bad condition that it discourages their use (this is especially relevant for seniors who like to walk along the water's edges for their recreation, it is dangerous for them). All this must be factored in while assessing future parking demand.

More studies and outreach efforts need to be made to target current user groups and mapping their key areas of use (as per the BCDC's DRC).

Asserting that ferry riders would park along Marina Blvd demands further study. It is inconceivable that ferry riders would walk 2400 to 3200 ft, and park their cars in an unpaved lot that provides no safety oversight, even if parking there were free.

As has been pointed out by many others, there are too few data points in your study for prime time usage by recreationists, this needs to be enhanced. And if a TDM program ascertains that paid parking makes management that much easier, it does not account for the impacts it would have on equity and public usage. It might make it "easier" for a transit terminal but it would have deleterious impact on attracting new users to the waterfront, something that both staff and policy makers support.

Hazards and Hazardous Materials
Traffic and Transportation:
The intersection at University and Frontage Road is dangerous, especially during peak commuter and recreation hours. A ferry with a set schedule will further exacerbate this, with drivers "rushing" to park and then catch the ferry, and upon their return to rush home after work. While adding traffic control devices would be Caltrans' responsibility, the NOP should recognize the need for improvements and factor this in the analysis.

There have been no reports that reference impacts the ferry would have on other public transit agencies, including BART and AC Transit that have much higher ridership numbers. Or how a Berkeley terminal would affect Oakland's and Richmond's ferry service.

Hydrology and Water Quality
More attention needs to be paid to wave action and wake projections in this report.

Alternatives:
There has been no recognition in the EIR process that alternatives can exist beyond a rebuilt pier. These include the docks that the Hornblower ties up, and the D&E docks as well.

Thank you for including my responses and observations.

Subject: Parking for the Ferry could impact Spinnaker Way

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To Liza McNulty, PE, Project Manager
City of Berkeley Parks, Recreation & Waterfront Department
lmcnulty@berkeleyca.gov

Dear Ms Liza McNulty,

My comment for scoping for EIR for the proposed Ferry/Pier project 2025

I fear that autos filling up parking near the ferry dock will push other drivers to park further east along University Ave., and along Marina Blvd (which is often nearly full,). So then people who normally park along Marina Blvd will move into the Spinnaker Way area, with the end result that there will be no parking for those of us who visit Chavez Park.

This is of concern to me because I visit Chavez Park almost every day.

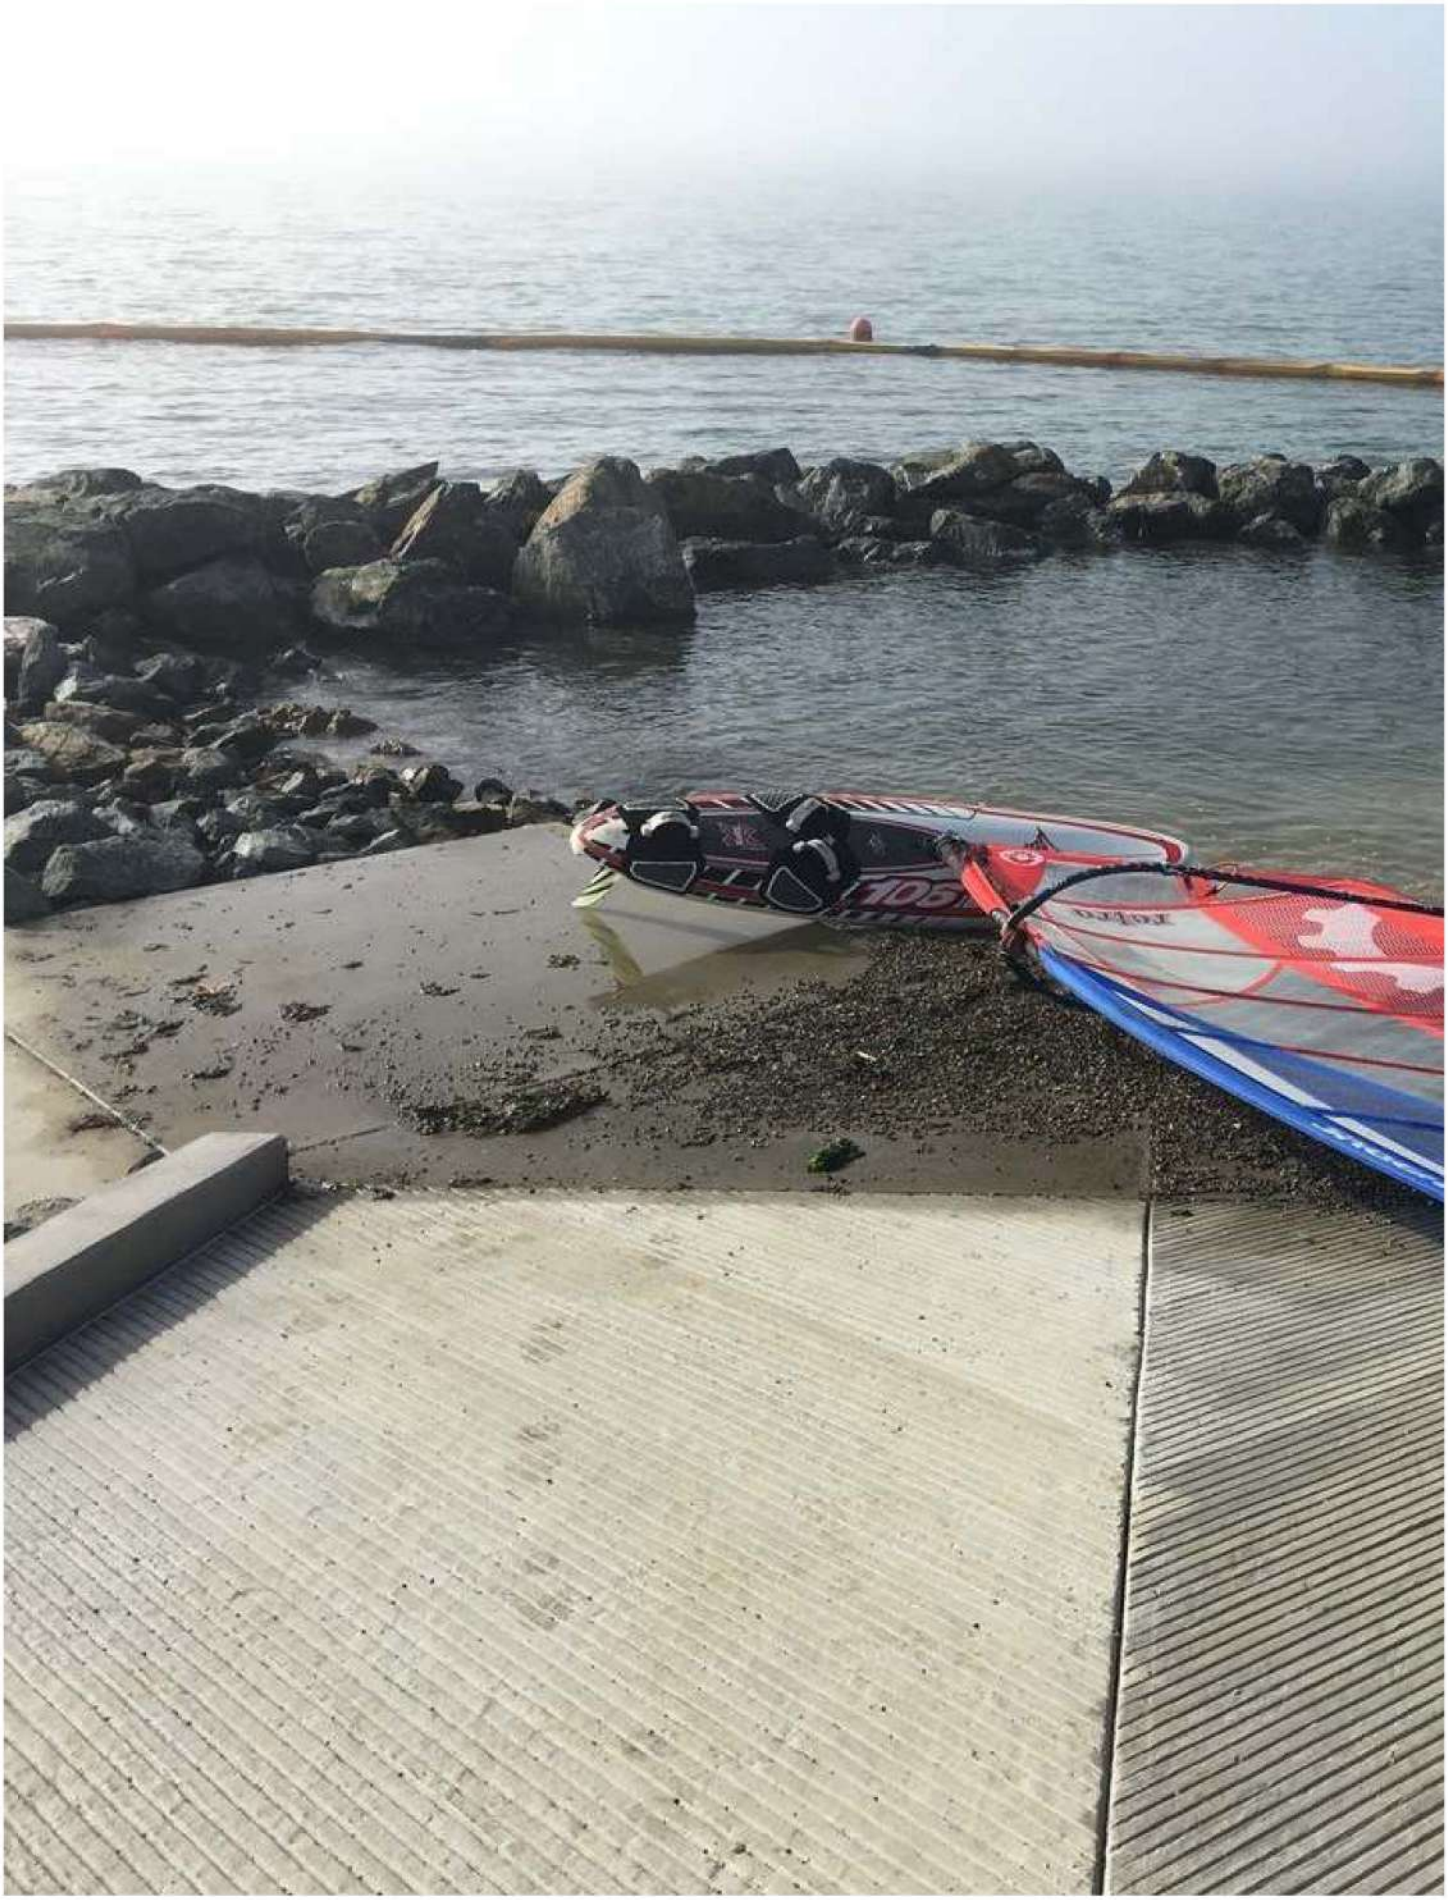
Liza,

First, I appreciated the way you ran this meeting, both soliciting input and speaking with candor. I hope that the recording of the meeting, including slides, will be made available - but don't find it at the WSP website yet?

Now that I've had a chance to reflect, I'd like to share some thoughts/suggestions as well as additional concerns.

I believe you heard from many disparate users how important non-motorized launch access at His Lords Cove is and will remain (including swimmers). That cove provides immediate access to deeper parts of the Bay as well as to the usual seasonal Westerlies PM windline. At the same time, I heard you express concern that "risks/legal constraints" might preclude future development and use of that Cove. That, along with the phrase "under consideration" regarding Cove improvements, definitely set off alarms.



The alternative access site you mentioned (just NE of His Lords on South Sailing Basin side - "Option 2"?), while perhaps attractive from terrain and cost considerations, would basically negate the two most important attributes of the Cove (see above). It is one thing to carry gear on ramps/ashore and quite another to swim it westward around the point to access depth and wind, especially if you are trying to get upwind and fighting Mother Nature.

Another critical issue that everyone seemed sensitive to is the "final approach" to actually putting gear and bodies into the water. At present, users must clamber down/up the riprap to access the relatively benign gravel/sand/muck path below. High tide presents even more challenge as users struggle to see where to step under the surface prior to reaching that path. I have decades of experience managing that process at the Cove - almost never pleasant. A solution that doesn't address that will be a major concern.

Some suggestions:

1. I don't know who you are consulting with regarding actual launch improvement design? For the Pt. Isabel project I worked with Kyle MacDonald, the coastal engineer initially via CLE Engineering, which subsequently became Foth/CLE Engineering. I'd suggest early and close involvement of users with actual planners/engineers would be much more likely to produce good outcomes. That was precisely my experience with EBRPD and Foth for the Pt. Isabel project. Prior to final design and construction, I gave rigging/launch demonstrations to involved staff to clarify constraints and access needs, etc.

2. At Pt. Isabel, the "breakthrough" came when we decided on two ramps - an ADA version (5% max grade) and a more immediate/practical steeper version (20%). However, as you will see in photo right below showing my gear and the "meeting pad" of the two ramps, that approach still begs the question of the "final approach" given terrain at His Lords.

Important to note that for this launch we managed to avoid using railings and stairs, both significant impediments to gear access. Also, we have avoided green slime/algae buildup as the base of the ramp has been at least 6 inches above typical high tide levels - a critical safety feature.

3. I also remain concerned about access improvements at the Cove given the uncertainty of the HLS restaurant's future. For example, if it were to be demolished, I expect we'd have much more design freedom.

4. The Cove jetty is definitely "moving" eastward as well as being "eroded" by ongoing wave action. It is a much larger jetty than the one we replaced at Pt. Isabel, thus would be more costly to replace. The His Lords jetty was definitely not built to same standards as the Foth-designed one (which is aging well after 6 years).

5. The SF Bay Water Trail was a "proud supporter" of the Pt. Isabel launch improvement. I'd suggest reaching out for potential funding support from them?

6. Construction staging is a major launch access concern. That was an issue at Pt. Isabel as well - photo here:

In conclusion, I'm pleased to share my experiences at both Pt. Isabel and His Lords - along with extensive photographic and documentary archives (additional items copied below).

I took Ali Endress on a tour of Pt. Isabel several years ago and would be happy to do so again if desired by you and/or your consultants.

Sincerely, David

P.S. Additional thoughts & Project Alternative:

A. We are experiencing increasing "conflict" at the Cove re disparate users. Most recently fisherfolk have placed chairs in the Cove launch path with access impacts including fishing line snaring hazards. Any Cove launch design, at least absent rebuilding of the pier, must address this.

B. You requested "Project Alternatives" during the Focus Zoom. Mine is to more carefully explore siting WETA ferry operations from within the Harbor, as with Genentech operation. Smaller craft could use existing docks (Hornblower, etc), improving timing and decreasing overall project cost. I discussed this at length with WETA's Michael Gougherty years ago. He said WETA Board wasn't interested - even for a demonstration/trial approach. It would also separate the pier rebuild decision from ferry operations - a definite plus for most park users as you heard.

xxxxxx

Additional attachments:

This was draft Plan I presented to EBRPD Board back in 2018, resulting in their eventual approval of approx. $1.5-2 Million for the project.

Point Isabel Water Access and Safety Improvement Project

Existing Launch Access/Safety:
Replace the existing cement steps with a more accessible and stable textured ramp.
Add comparable-sized gravel to launch pathway above and below water line.
Rebuild and stabilize rock jetty to ensure adequate launch protection.
Remove submerged rock launch hazards to a minimum of 4 feet clearance below water surface at low tide in front of the launch gravel pathway.
Add channel markers to delineate launch area at high tide.
Rigging Area
Add 3,600-sf (80' X 45') rigging area comprised of ½" pea gravel.
Appropriate rigging area border, such as creosote timber logs around 3 sides, to help contain gravel and delineate rigging area.
Additional Site and Safety Improvements
Add an appropriately surfaced pathway from road to rigging area to launch site.
Add wash-down capability at rigging area (water accessed from existing supply to Park toilets or Radio Bldg).
Remove boulders currently blocking base of Dog Ramp (emergency egress site).

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ashley, Liza, and Members of the Design Review Board,

As a recreational user of the Berkeley Marina who swims there several times per week throughout the year, I have been dismayed by the decline in maintenance of recreational assets over the years, including the pier, the access point near the former Hs Lordships restaurants, and one of the docks in the South Basin. These common facilities are utilized by various groups including non-motorized recreational vessels, swimmers, and fishermen, among others.

The proposed improvements outlined in the Berkeley Waterfront and Ferry Pier project have not addressed how existing recreational users will be impacted in terms of water access and parking if the project moves forward. Furthermore existing recreational users have not been consulted nor had a voice in the planning process as stakeholders, despite delegates from these communities attending review meetings.

There has been very little to no effort made to engage with and solicit input from recreational users of the Berkeley Marina throughout the review process, though the proposed project will undoubtedly impact these groups. I encourage the BCDC to require additional due diligence from the project to engage with the communities that will be affected by the proposed improvements.

Best,
David

From KRON4
Hello all,

I remain extremely concerned about the network of high speed ferries proposed for the Bay and their impact on wildlife. I do not trust that an EIR (assuming it will actually happen) will address cumulative environmental impacts of this new "highway on the water" on marine wildlife and vegetation. Quiet fast ships are a menace. Slower loud ones (diesel) are too, for different reasons.

Erin

Subject: EIR NOP Comments on Berkeley Water Transportation Pier Ferry

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty,

Thank you for taking my input on the NOP for the EIR of the Pier-Ferry Project. Attached are my written comments.

I am also attaching the article about noise pollution in the ocean that you had asked me share at the May 5th Community Scoping meeting, conducted via zoom.

In case there are any issues accessing the 2 attached documents, I have also pushed them to my google drive, where they should be downloadable.
(https://drive.google.com/drive/folders/1ufP96m-XxSnS2cBPn259guEOZzkT36JN?usp=drive_link)

Please let me know if there are any questions or issues.

Best regards,
Erin

RE: Public Input on NOP of Draft EIR for Berkeley Water Transportation Pier Ferry

Dear Ms. McNulty

Thank you for taking my input on the NOP for the EIR of the Pier-Ferry Project and Waterfront Specific Plan. I am a Berkeley resident writing as a private citizen, in my own capacity. I have followed the planning effort at the Berkeley Waterfront closely since January 2018, when the findings for replacing the Berkeley Pier were shared with the public at the regular monthly meeting of the Parks and Waterfront Commission.

This submission addresses the following topics:

OVERVIEW
ALTERNATIVES
BASELINE
PARKING DATA & LATENT DEMAND
BIOLOGICAL RESOURCES during a GLOBAL BIODIVERSITY CRISIS
SITE VISITS for BIOLOGICAL RESOURCES
STUDY BOUNDARY AND DATA for BIOLOGICAL RESOURCES
ROAD MORTALITIES: COLLISIONS KILL BIRDS, MONARCHs, and COUNTLESS OTHER SPECIES
LIGHT POLLUTION
NOISE POLLUTION
SHIP STRIKES
ENERGY EFFICIENCY and GREEN HOUSE GASES
SHORELINE DISTURBANCE and TURBIDITY

OVERVIEW

At the highest level, and from the very beginning, I remain concerned about the bifurcation of the planning efforts of the Pier/Ferry and the Waterfront Specific Plan (WSP). This artificial split has hindered the accurate assessment of the cumulative impacts of the ferry and potential development in other areas of the Waterfront/Marina area – including recreational access, the environment, local & migratory species, equity, public health, and more.

The bifurcation of the Pier-ferry project from the WSP is a kind of piecemealing which is not allowed under CEQA law. For example, and more recently, in their presentation to the Parks, Recreation and Waterfront Commission at their regular meeting in May 2025, Berkeley Staff described how overflow parking for the ferry would now be designated for the Skates parking lot and along Marina Boulevard. These locations had been illustrated in earlier versions of the WSP as the potential location of a new hotel &/or parking. Thus, the ferry and WSP are bleeding into each other and are truly one single project, and should be evaluated as such.

ALTERNATIVES

To adhere to CEQA law, the EIR should address potentially feasible alternatives, that may be environmentally &/or economically superior, including, but not limited to:

1. **a pier-only/no-ferry option – at the location of the currently closed pier.** Until its closure, the pier (and associated fishing) offered important recreational opportunities and food security for many (valued in the millions of dollars, as documented by C. Antinori Ph.D., et al[1]) Separately, on January 10, 2018 the results of a cost analysis for replacing just the pier (no ferry) were shared with the public at the Parks & Waterfront Commission.[2] Numerous scenarios were cost-estimated. Four of them ("Replacements" P8, P9, P10 and P11) ranged in cost from $21-24M with an encouraging longevity of "55 to 70" years. In spite of the hopefulness of these findings, discussion of a pier-only replacement did not continue and all further discussions of the pier involved the addition of a high-speed ferry. Moreover, many in the community have expressed their support for a pier-only option; it should be included as an Alternative in the EIR.
2. **locating the ferry terminal inside the Marina, on the North side of the interior of the Marina** near the current-day DoubleTree, with a potentially smaller ferry. This location offers several benefits: (a) environmentally, by eliminating the need for new harmful dredging on the western edge where the currently closed pier is located (outside the Marina), thereby minimizing the dredging for the project, (b) maintaining recreational access, by having ferry users park in the dry-dock parking lot (on the north side), the lots on the south side of the Marina will remain open and the land designed for recreational use on the south side will remain available to those users (recreational access won't have been usurped by the ferry).

BASELINE

To ensure that the Baseline reflects the true current demand, and not an artificially low one, the Baseline of recreational usage should incorporate recent prior usage, prior to the closure of 4

[1] A newer version of this article may be available from the authors. This is the version referenced above: "Fishing at the Berkeley Waterfront: What is it Worth?" by Camille Antinori Ph.D. et al. San Francisco State University, Sept 12, 2022., https://drive.google.com/file/d/14Gipko8qHsZxIFd4c6BHdiZzB8Pw-Alt/view

[2] Berkeley Municipal Pier Renovation Alternatives. https://berkeleyca.gov/sites/default/files/documents/COB%20-%20Alternative%20Summary%20Table_edits.pdf

facilities that attracted many people to the Waterfront, namely: the fishing pier, Hs Lordships and its parking lot, the East dock, and the lot currently fenced off for use by parking enforcement. The Baseline should not be based on usage in 2025 at the time of the NOP, when these 4 facilities are closed and inaccessible to the public, which drives down activity and would give an artificially low, inaccurate assessment of true need and current usage.

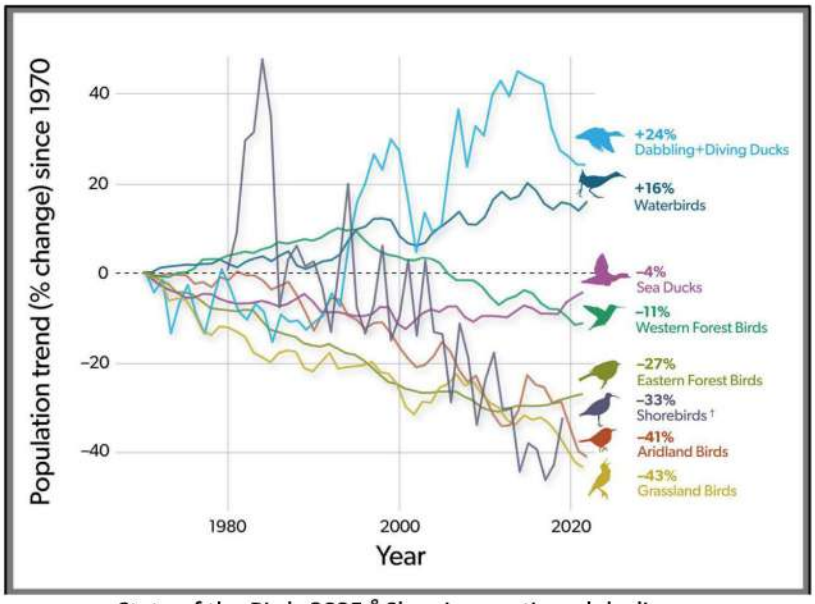
FOR EIR SCOPE: To ensure accurate and proper assessment of usage, the Baseline should be based on activity that includes (1) a reopened 2,000-ft pier, plus (2) the reopened Hs Lordships space & lot, plus (3) the reopened East dock, plus (4) the reopened lot currently fenced off for parking enforcement.

PARKING DATA & LATENT DEMAND

The current version of Kittelson's parking study for the pier-ferry project requires additional work, because the scope of the data is insufficient. It doesn't include data for summer months (times of peak use) and it combines data across all locations, ignoring specific uses in specific locations and users' specific needs (like bringing equipment). The data also do not account for latent demand—specifically, the increase in visitorship that is reasonably expected following the restoration of the pier and the addition of new amenities in the marina area.

FOR EIR SCOPE: Under CEQA, environmental review must consider foreseeable changes resulting from a project, and increased activity and visitation due to enhanced public attractions are both foreseeable and significant. Therefore, I request that the parking analysis be revised to include data for each individual lot, at times of day/year in the summer that reflect true peak usage, include when parking visitors bring with them equipment to use with the recreational activity, and projections for latent demand, ensuring that the Environmental Impact Report fully reflects the project's likely impacts on parking availability and transportation infrastructure.

BIOLOGICAL RESOURCES during a GLOBAL BIODIVERSITY CRISIS



It is widely recognized that we are in a global biodiversity crisis. Scientists predict that on our current trajectory, nearly 40% of all species will face extinction by 2100[3]. Insects are in steep decline (e.g. up to a 75% loss if insect biomass since 1990, the "Insect Apocalypse"[4]; a 22% decline in butterfly species from 2000-2022, plus an ongoing additional 2% loss per year[5]). Birds are in trouble, too. Since the 1970s almost one-third of all birds have disappeared from the U.S.[6]

[3] "Expert perspectives on global biodiversity loss and its drivers and impacts on people." by F. Isbell et al. in Frontiers in Ecology and the Environment, July 18 2022. https://doi.org/10.1002/fee.2536
[4] "More than 75 percent decline over 27 years in total flying insect biomass in protected areas." by C. Hallmann, et al., in PLOS One, October 18, 2017. https://doi.org/10.1371/journal.pone.0185809
[5] "Rapid butterfly declines across the United States during the 21st century." by E. Edwards, et al. in Science, Vol 287, Issue 6738, March 6, 2025. https://www.science.org/doi/10.1126/science.adp4671
[6] "Nearly 3 Billion Birds Gone." by Cornell Lab of Ornithology. https://www.birds.cornell.edu/home/bring-birds-back

and the recent State of the Birds[7] found that virtually all species continue to decline, including Shorebirds and even Ducks (which had been a ray of hope in the past).

Almost 1/3 of all birds have disappeared in the last 50 years
from Cornell Labs, based on "Decline of North American Avifauna." Rosenberg et al (2019)

State of the Birds 2025.[8] Showing continued declines.
† Shorebirds indicator trend has not been updated since 2019

FOR EIR SCOPE: EIRs typically limit evaluation of Biological Resources to an extremely short list of formally listed species, which results in very few species being considered and the vast majority of others being ignored, potentially putting many in harm's way. Given the biological importance of the proposed project site (locally and regionally), coupled with the alarming

[7] "State of the Birds 2025" https://www.stateofthebirds.org/2025/executive-summary/
[8] ibid.

global declines in biodiversity, it is appropriate and I request that the EIR cast a wider net when evaluating which species to consider as a "Biological Resource", to include species that aren't listed (and are being considered for listing), and to evaluate comprehensive impacts of the proposed high-speed ferry system, including increased vehicle traffic to the Marina (and associated collisions with insects, birds, and wildlife), light pollution, noise (above and below water), and more.

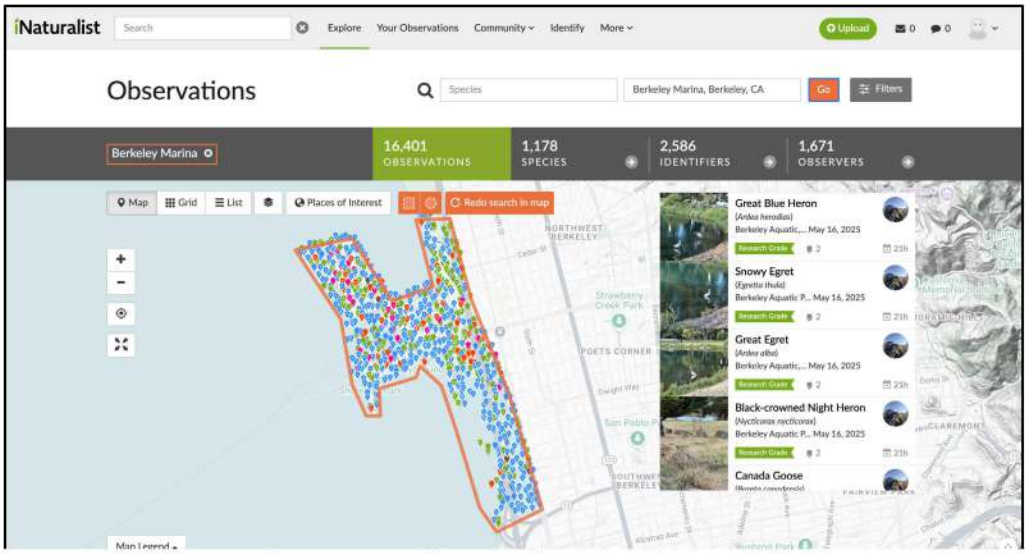
SITE VISITS for BIOLOGICAL RESOURCES

Migratory species may be present in some months and absent in others. If site visits occur when a migratory species aren't present, the impact on those species will be ignored.

FOR EIR SCOPE: To ensure a comprehensive evaluation of Biological Resources under CEQA, I request that a number of site visits be conducted, across multiple seasons and key biological windows. This approach is critical to accurately document the presence or absence of migratory species, breeding activity, and other seasonally dependent ecological factors. Site assessments limited to a narrow timeframe risk overlooking important biological indicators and could result in an incomplete or inaccurate impact analysis.

STUDY BOUNDARY AND DATA for BIOLOGICAL RESOURCES

The boundary of study as presented in the NOP is too small to accurately assess real impacts on Biological Resources by the proposed Berkeley ferry and the larger WETA ferry system. The boundary described in the NOP is limited to University Avenue, the proposed ferry Plaza, 3 nearby parking lots, the Pier and waters nearby north and south; illustrated below (from the NOP):



Area of Study as proposed in the NOP, April 18, 2025.

Birds and other species, readily move throughout the larger marina area, to forage, find nesting material, hunt, and more. It is unreasonable to limit the boundary to such a small area and think it will assess the real impacts on nearby species. A bird that lives in Sylvia McLaughlin Eastshore State Park, or in the Marina, may forage in the vegetation at Shorebird Park or in the water along the shoreline affected by the high-speed ferry. **The boundary should, therefore, be expanded.**

Ensuring adequate assessment is especially important because Berkeley's Waterfront/Marina is of high global ecological significance. It lies within the San Francisco Bay, the largest estuary on the West Coast and one of North America's most important... recognized as an international biodiversity hotspot... [and a] key stopover along on the Pacific"[9] with millions of birds migrating through at peak season.

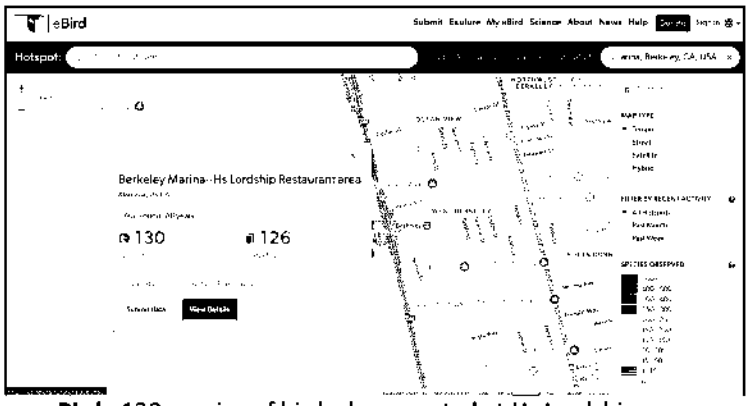
To evaluate the biological resources at the Waterfront, the EIR should use the globally-utilized and -recognized citizen-science platforms **iNaturalist** and **eBird**[10] to ensure that all species inhabiting the Marina/Waterfront area – year-round residents & migratory, listed & not-listed – are documented and adequately protected from unnecessary harm.

iNaturalist data shows that 1,178 total species have been documented in the larger Berkeley Marina area, illustrated below[11] (this includes 196 species of birds, not illustrated, but Filters can focus on avian species):

iNaturalist. 1,178 total species documented in Marina area.

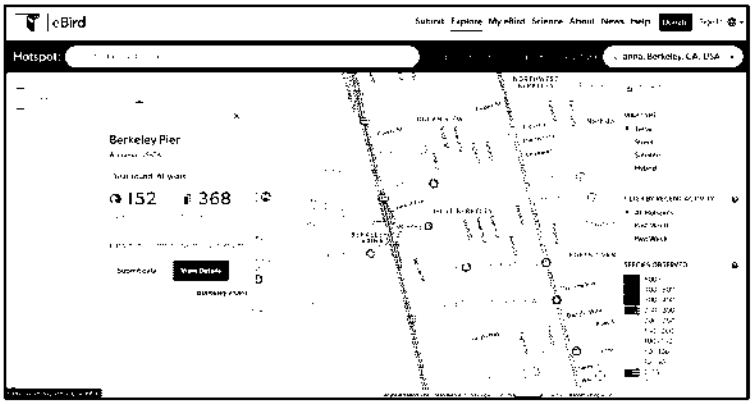
[9] "Audubon Projects, San Francisco Bay" https://www.audubon.org/california/projects/san-francisco-bay

[10] **iNaturalist** is used to document a wide range of species: birds, fish, mollusks, plants, insects, etc.; **eBird** is used to document just bird species

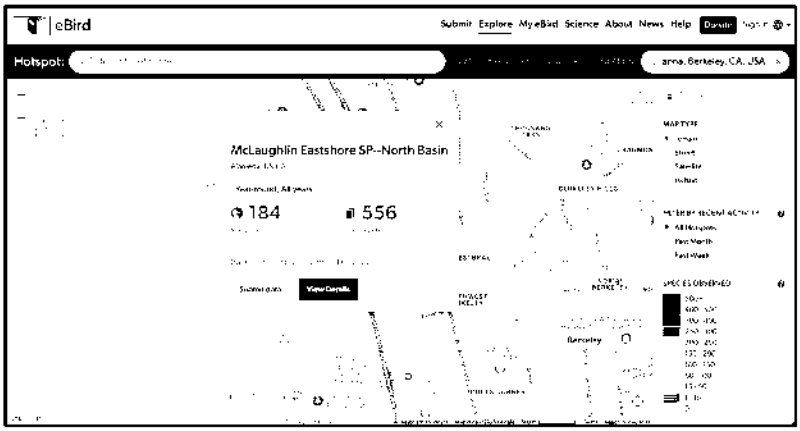


[11] iNaturalist - to focus on a specific location, in its name in the field "Location" in upper-right. https://www.inaturalist.org/observations?place_id=62221&subview=map

Using filters to focus on just "Threatened" bird species, as defined by iNaturalist, shows 23 such bird species documented in the Marina Area, illustrated below:

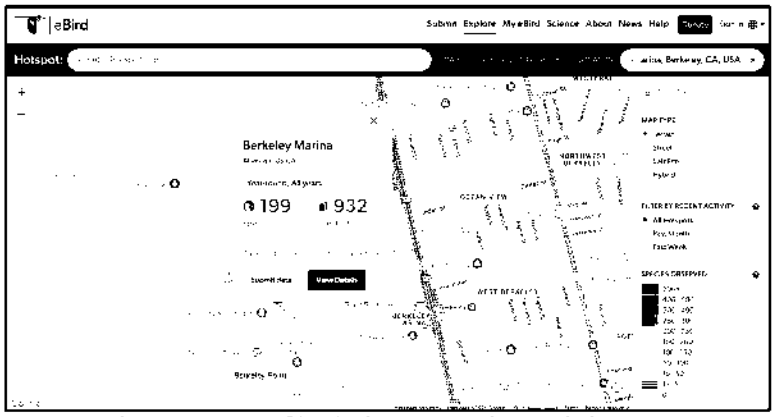


iNaturalist. 23 species of "threatened" birds documented in the Marina area.

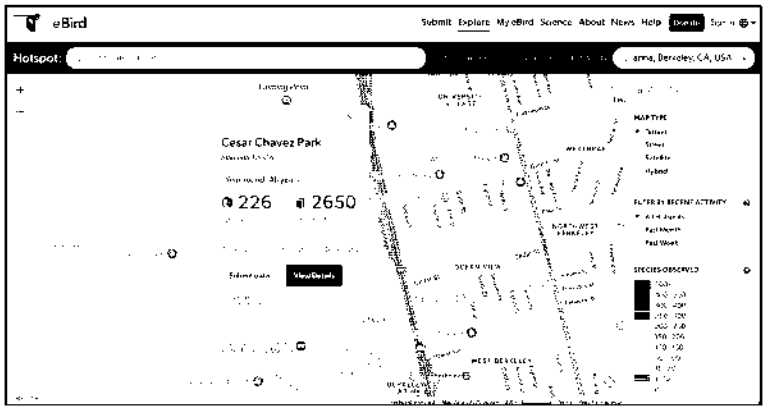


eBird data[12] shows that up to 231 species of birds have been documented in the area immediately surrounding the ferry project site, illustrated below:

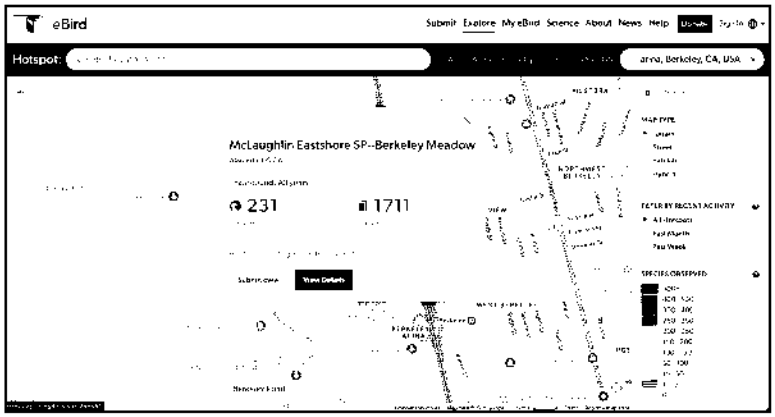
eBird. 130 species of birds documented at Hs Lordships area



eBird. 152 species of birds documented at the Berkeley Pier

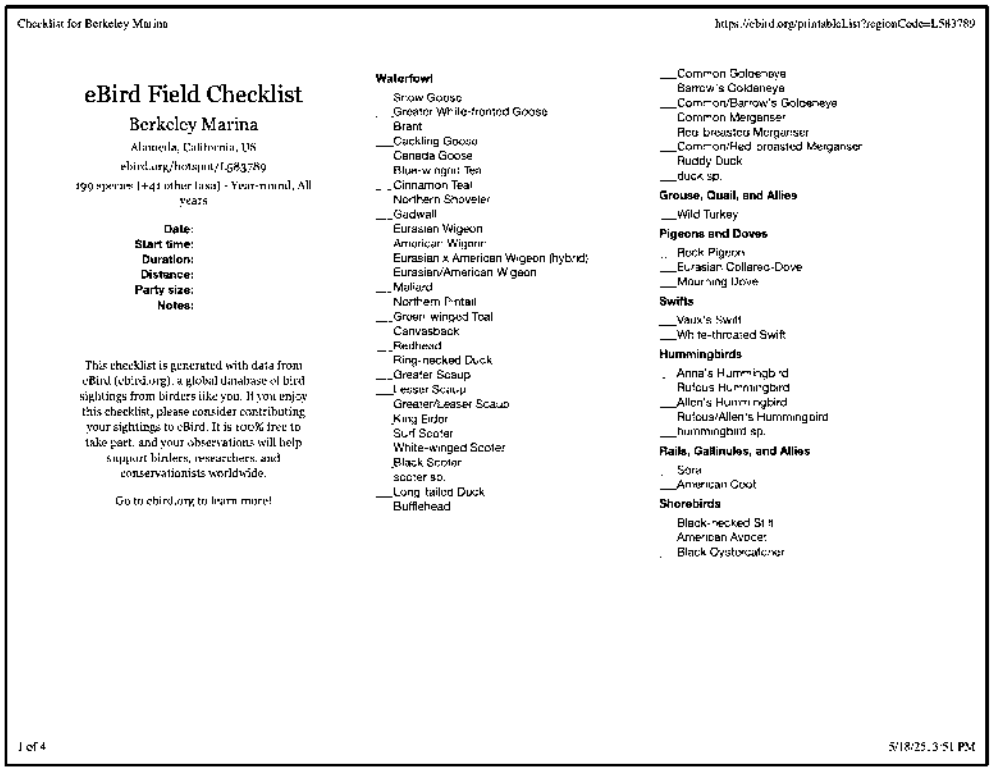


eBird. 184 species of birds documented in the North Basin (of Sylvia Mclaughlin Eastshore SP)



[12] eBird hotspots - to focus on a specific location, enter location in upper-right field) https://ebird.org/hotspots

eBird. 199 species of birds documented in Berkeley Marina



eBird. 226 species of birds documented at Cesar Chavez Park

eBird. 231 species of birds documented at Sylvia McLaughlin Easthore State Park

For each hotpot, a checklist can easily be printed to identify species documented. For example, here is the list of the 199 documented at the Berkeley Marina.

eBird. Checklist of the 199 birds documented at the Berkeley Marina. (4 of 4)

In addition to **iNaturalist** and **eBird**, the **Facebook** Group **"Nor Cal Birding"** has documented bird species at the Berkeley Marina, including protect ones. For example, a pair of nesting

White-Tailed Kites and their young were photographed in the Marina. The White-Tailed Kite is a CA listed species.

Facebook Group "Nor Cal Birding". White-tailed Kites and their young documented at Berkeley Marina. (1 of 2)

Facebook Group "Nor Cal Birding". White-tailed Kites and their young documented at Berkeley Marina. (2 of 2)

The nesting & feeding patterns of birds and other creatures cover a broad area. For example, a bird that nests on the east side of the Marina, may hunt in Shorebird park. A snake that lives in the Sylvia Mclaughlin Eastshore State Park may crawl south across University Avenue to forage, but be killed by an oncoming vehicle while crossing the road.

FOR EIR SCOPE: To ensure a complete and adequate assessment, the EIR should not base its analysis of Biological Resources on on-site visits alone. Those visits are inherently limited in time and scope, making them insufficient to evaluate the presence of migratory species throughout

the year. To ensure a full and complete analysis of Biological Resources, reliable and more comprehensive data sources available online should be utilized, too. I request that the EIR incorporate relevant data from iNaturalist and eBird in its evaluation Biological Resources.

I also request that the study boundary for biological resources in the EIR be expanded to encompass the full range of habitat areas functionally connected to the project site, as many species rely on spatially distinct but ecologically linked areas for critical life functions such as foraging, nesting, and migration, and a narrowly defined boundary may fail to capture significant impacts on their survival. I request that the expanded boundary cover the larger Waterfront area, including:

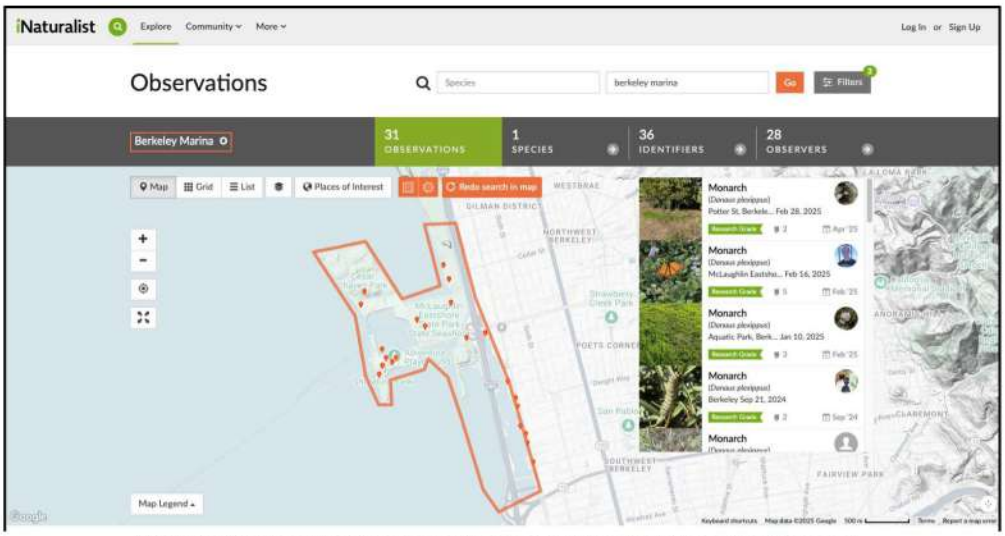
- University Avenue, extending south to the South Basin shoreline
- Sylvia McLaughlin Eastshore State Park
- North Basin
- Cesar Chavez Park
- Berkeley Marina (landside and basin)
- Shorebird Park & Seawall Area (formerly Hs Lordships and lot)
- the Plaza, pier, and nearby waters

Lastly, to ensure that potentially significant impacts on biological resources are adequately assessed, I request that leading local conservation organizations are contacted for their input on the EIR, especially:

- The Golden Gate Bird Alliance (https://goldengatebirdalliance.org)
- Marine Mammal Center (https://www.marinemammalcenter.org)
- East Bay Chapter of the California Native Plant Society (https://ebcnps.org)

ROAD MORTALITIES: COLLISIONS KILL BIRDS, MONARCHs, and COUNTLESS OTHER SPECIES

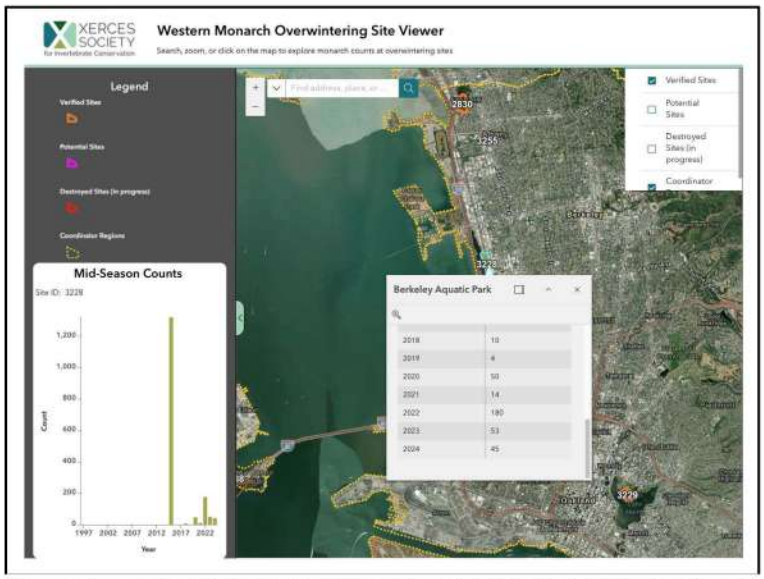
Wildlife-vehicle collisions are a major source of animal mortality, killing hundreds of millions of birds, butterflies, and other species annually.[13], For example,



- "When averaging across model iterations, we estimated that between 89 and 340 million birds die annually from vehicle collisions on U.S. roads."[14]
- "...some 4.7 million monarch [butterflies]" died as a result of vehicular collision in the Central Funnel of southwestern Texas in the autumn of 2016 and 2017."[15]

[13] "Flight Doesn't Solve Everything: Mitigation on Road Impacts on Birds", by A Kociolek, et al. Chapter 33 https://www.fs.usda.gov/psw/publications/jacobson/psw_2015_jacobson001_kociolek.pdf

[14] "Estimation of bird-vehicle collision mortality on U.S. roads." by Scott Loss, Tom Will, and Peter Marra. in Wildlife Management, Vol 78, Issue 5, July 2014. https://doi.org/10.1002/jwmg.721



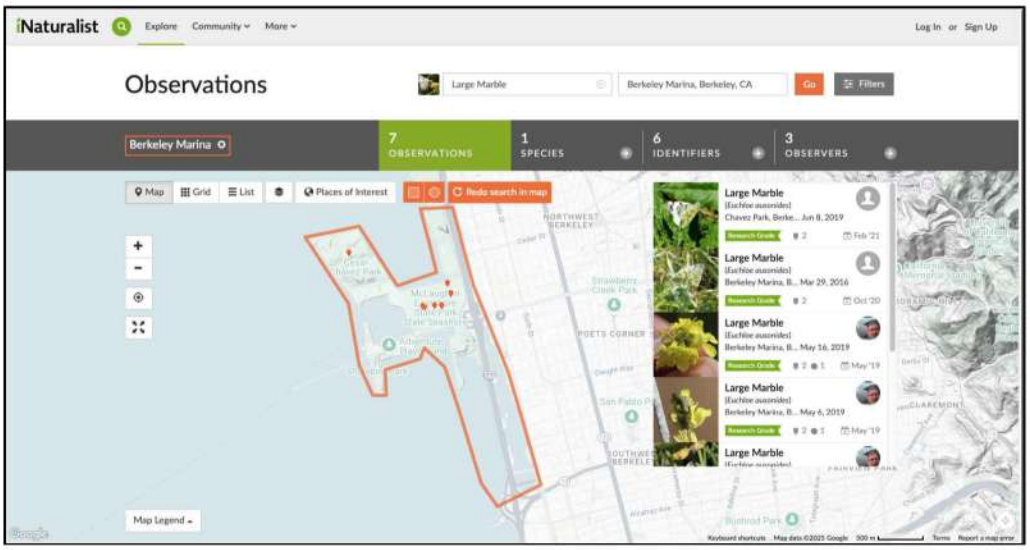
[15] "Roadkill is a problem for monarch butterflies. Can it be solved?" by Brandon Keim, in Anthropocene Magazine, February 20, 2019. https://www.anthropocenemagazine.org/2019/02/monarch-butterfly-roadkill-solutions/

Western monarchs (*Danaus plexippus*) are currently at extreme risk, with populations down 99%. They face a 98%-99% probability of extinction by 2080 and, along with the Eastern populations, are being considered for listing as an Endangered Species.[16] Monarchs have been documented throughout the Marina area:

iNaturalist. Documenting the Monarch butterfly at the Marina area.

They have also been documented at nearby Aquatic Park over the past 10 years as part of the annual Western Monarch Count.[17] Some of the individual monarchs seen at Aquatic Park may have visited the Waterfront/Marina area, and vice versa, traversing a habitat corridor.

Monarch counts for the past 10 years taken at Berkeley's Aquatic Park



[16] "Save the monarch." on US Fish & Wildlife Service. https://www.fws.gov/initiative/pollinators/save-monarch
[17] Western Monarch Count Map of Overwintering Sites. on Xerces Society website. https://westernmonarchcount.org/map-of-overwintering-sites/

from Xerces Society, Western Monarch Count webpage[18]

The Large Marble butterfly (*Euchloe ausonides*) is in steep decline. In October 2023 the Xerces Society of Invertebrate Conservation petitioned the U.S. Fish & Wildlife Service for protection under the Endangered Species Act:

> "**California's large marble butterfly is the most imperiled.**
> Once present throughout each county in the Sacramento valley and San Francisco Bay regions, most remaining populations are relegated to beachfront areas along the San Francisco Bay... Multiple long-term butterfly population monitoring sites have documented the disappearance of this butterfly subspecies..."[19]

In spite of the declines, Large Marbles have been seen in the Waterfront/Marina area and documented on iNaturalist. Given its proximity to University Avenue, this species could be put at risk by increased vehicle traffic on University Avenue.

iNaturalist. Documenting the Large Marble butterfly at the Marina area.

Several species of protected birds have also been documented at the Marina area.

The proposed ferry project will increase traffic on University Avenue. Moreover, the recent repaving of University Avenue increases vehicle speeds.

FOR EIR SCOPE: I request that the EIR include in analysis of impact on Biological Resources, potential significant risks to monarchs, birds, and other creatures, due to collision with vehicles, especially along University Avenue.

---

LIGHT POLLUTION

Artificial Light At Night (ALAN) is a major environmental disruptor.

ALAN can interfere with organisms at all levels – from those in the soil, to insects, aquatic species[20], birds, and even humans (where it is associated with certain kinds of cancers). ALAN is a major driver of global insect declines[21]. Light pollution negatively impacts birds, too, disrupting nesting behavior and even bird global migrations[22] –birds are lured off course, into urban areas, where they face numerous threats. Birds making the flight for the first time are especially vulnerable.

With the advent of energy-efficient LEDs, the cost of lighting has greatly decreased causing the use of LEDs to proliferate. Global light pollution is now increasing at 2% per year.[23] DarkSky International offers guidelines for outdoor lighting[24] outlining "5 Principles for Responsible Outdoor Lighting"[25]

FOR EIR SCOPE: The EIR should include a robust evaluation of all potential new light pollution associated with the proposed ferry project and mitigations. It should include potentially introduced light, as part of the proposed pier-ferry at just Berkeley, as well as across the entire ferry system, including the existing 10 Terminals and the proposed 27 total future Terminals, to determine the true cumulative impacts of the WETA ferry system on our Bay environment.

NOISE POLLUTION

Whether all-electric or diesel, the WETA high-speed ferries contribute to the growing anthropogenic cacophony in the Bay waters. The article "The soundscape of the Anthropocene ocean"[26] offers many helpful statements about the noise risks of the proposed high speed ferry system on marine life in the Bay, including this Outlook,

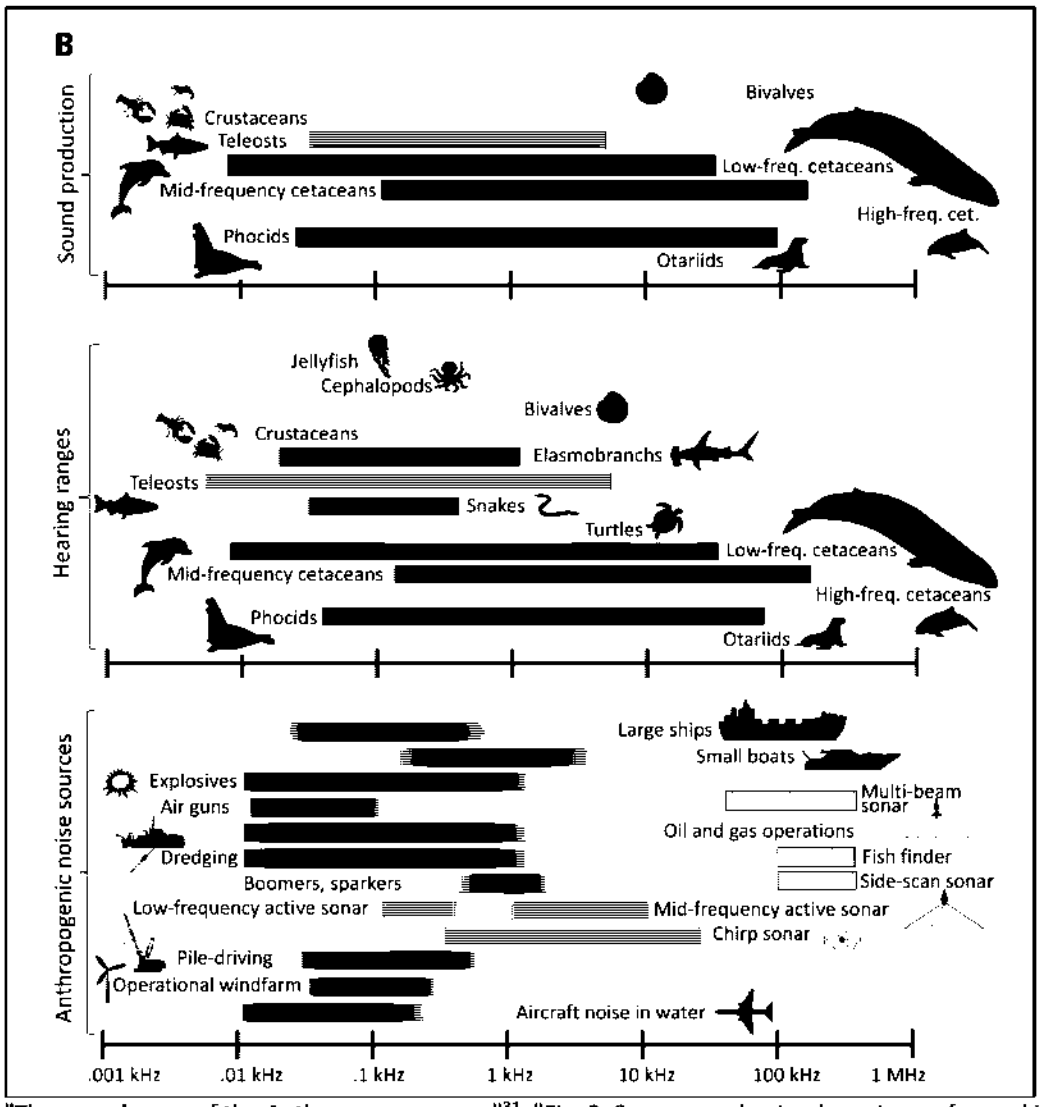
[26] "The soundscape of the Anthropocene ocean." by D. Duarte, et all, in *Science*, vol 371, No 6529, February 5 2021. https://www.science.org/doi/10.1126/science.aba4658

> "Anthropogenic noise is a stressor for marine animals. Thus, we call for it to be included in assessments of cumulative pressures on marine ecosystems. Compared with other stressors that are persistent in the environment, such as carbon dioxide emitted to the atmosphere or persistent organic pollutants delivered to marine ecosystems, anthropogenic noise is typically a point-source pollutant, the effects of which decline swiftly once sources are removed. The evidence summarized here encourages national and international policies to become more ambitious in regulating and deploying existing technological solutions to mitigate marine noise and improve the human stewardship of ocean soundscapes to maintain a healthy ocean."[27]

and regarding noise as pollution,

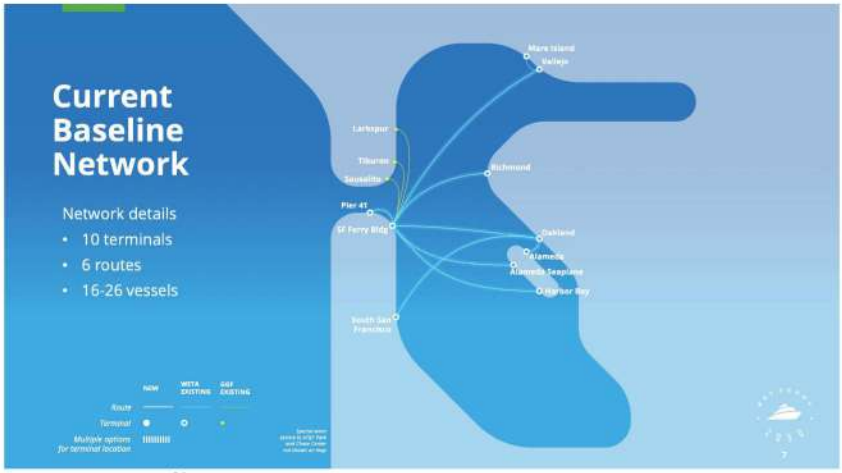


> This "anthropogenic noise", (introduced by ferries and other sources), "is a pollutant that cannot be ignored... it must be mitigated to reduce human impacts"[28] on the ocean soundscape and marine life.

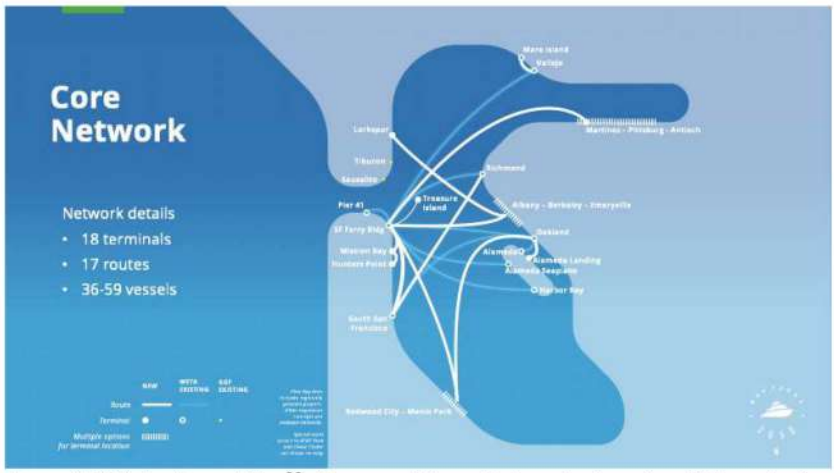
and regarding environmental review,

> "Anthropogenic noise is a stressor for marine animals. Thus, we call for it to be included in assessments of cumulative pressures on marine ecosystems."[29], and,
> "Although our assessment shows that anthropogenic noise detrimentally affects marine animals, a lack of global syntheses of data has resulted in it being typically ignored in reviews of cumulative and/or global impacts of anthropogenic stressors on marine life"[30]

The article includes an excellent graphic illustrating the overlap between the sound production and hearing ranges of marine taxa and frequency ranges of selected anthropogenic sound sources:



[27] ibid.
[28] ibid.
[29] ibid.
[30] ibid.



From "The soundscape of the Anthropocene ocean"[31]. "Fig. 2. Sources and animal receivers of sound in the ocean soundscape. (B) Approximate sound production and hearing ranges of marine taxa and frequency ranges of selected anthropogenic sound sources. These ranges represent the acoustic energy over the dominant frequency range of the sound source, and color shading roughly corresponds to the dominant energy band of each source. Dashed lines represent sonars to depict the multifrequency nature of these sounds."

Now let's look at WETA's current and proposed ferry system, in light of the anthropogenic noise that will be introduced to the Bay waters. At writing there are 10 Terminals but WETA's Business Plan identifies 26 total Terminals system-wide, stretching the length of the Bay, from Pittsburg-Antioch (in the north, on the Delta), all the way down south to Sunnyvale-San Jose-Milpitas (at the very southern reach of the Bay).

[31] ibid.

From WETA Business Plan[32]. Current Baseline Network, showing the 10 existing terminals as of (May 2025)

From WETA Business Plan[33]. Proposed Core Network, showing 18 terminals.

From WETA Business Plan[34]. Proposed Coverage Network, showing the 26 terminals.

[32] WETA 2050 Service Vision & Business Plan. https://sanfranciscobayferry.com/2050-service-vision-business-plan/
[33] ibid.
[34] ibid.

With each new terminal, the noise pollution introduced into the Bay environment by the WETA ferry system will increase. Given the frequency of routes and the reach of this system, the noise disruptions could be significant, extensive and virtually Bay-wide, possibly introducing "harassment" of aquatic species.

FOR EIR SCOPE: Pursuant to the California Environmental Quality Act (CEQA), which requires analysis of all potentially significant environmental impacts of a proposed project, I request that the Environmental Impact Report (EIR) for the proposed high-speed ferry terminal in Berkeley include a thorough assessment of noise pollution—both above and below water—generated by ferry operations – for both electric and diesel vessels. This analysis should address the specific impacts at the proposed Berkeley terminal, as well as the cumulative impacts associated with the current system of 10 terminals, as well as the full build-out of 26 terminals, as required under CEQA Guidelines §15130 regarding cumulative impacts. Given the well-documented sensitivity of aquatic and shoreline wildlife to noise pollution, particularly from high-speed vessels, the EIR must evaluate potential effects on local and migratory species, including those protected under state and federal law. This analysis is essential to ensure compliance with CEQA's mandate to avoid or mitigate significant environmental impacts wherever feasible.

SHIP STRIKES

Ship strikes are a known disruptor and cause of death for aquatic species. For example, 5 gray whales have recently stranded and died in the Bay Area. One was confirmed due to a ship strike[35]. High-speed vessels, particularly quiet electric ferries, pose an increased risk to whales and other aquatic species due to reduced detectability. The WETA ferry system currently has 10 Terminals and plans to expand to 26 total. Every additional Terminal, with multiple routes per day multiplies the threat to marine mammals and other wildlife.

FOR EIR SCOPE: I request that the EIR specifically evaluate the risk of ship strikes and other disruptions due to turbulence on all aquatic species, across the entire ferry system, specifically, for ferries at (a) just the Berkeley site, (b) ferries cumulatively across the existing 10 Terminals, and (c) ferries cumulatively across the proposed expanded 26 Terminals.

The Marine Mammal Center (https://www.marinemammalcenter.org) conducts important research on ship strikes. I request that the EIR team reach out to them for input and guidance on this important topic.

ENERGY EFFICIENCY and GREEN HOUSE GASES

At community meetings early-on in the planning of the proposed pier-ferry, we in the community (myself included) asked several times for information about energy efficiency of the

[35] "Fifth dead whale found in San Francisco Bay" by Ryan Mense at KRON4, April 21, 2025. https://www.kron4.com/news/bay-area/fifth-dead-whale-found-in-san-francisco-bay/

ferries. To date we have not received an answer. We want to know how much energy the ferries - diesel and electric - use per passenger mile (expressed as BTUs per passenger mile). We want to compare that efficiency with other forms of transit for crossing the Bay (e.g. BART, or a fully loaded bus) to determine if the ferry is the environmentally superior alternative.

Second, while the ferry has been described as an all-electric "zero emission", the generation of the energy to supply the batteries will likely involve burning of fossil fuels off site, generating GHGs. In addition, many ferry riders will drive a gasoline-powered car to the Marina to take the ferry (instead of walking or biking to their local bus or BART stop), emitting GHGs.

FOR EIR SCOPE: Pursuant to CEQA Guidelines § 15126.2(b) and Appendix F, I request that the Environmental Impact Report (EIR) for the proposed high-speed ferry terminal include a comprehensive analysis of energy use and energy efficiency associated with both the construction and operation of the project. This should include, but not be limited to, fuel consumption for ferry vessels, electricity and energy demands of terminal facilities, and any supporting infrastructure. I request that the energy use (for the ferries, expressed as BTUs per passenger mile) be compared with other forms of transit across the Bay (e.g. BART). The analysis should evaluate whether the project would result in wasteful, inefficient, or unnecessary consumption of energy.
I also request that a comprehensive evaluation of GHGs emitted, off-site for powering the ferries & their operations, as well as locally from the fuel for passenger vehicles.

SHORELINE DISTURBANCE and TURBIDITY

I remain extremely concerned that the proposed high-speed ferry system will significantly increase disturbance and turbidity along our Bay shoreline, degrading the biological stability of the shoreline and negatively impacting biological resources, including benthic organisms, birds that hunt along the shallow shoreline and the fish that anglers depend on.

FOR EIR SCOPE: I request that the EIR for the proposed high-speed ferry terminal include a detailed analysis of the potential for increased shoreline disturbance and turbidity resulting from ferry operations. This analysis should address localized impacts near the proposed terminal in Berkeley, including wake-induced erosion, sediment resuspension from vessel prop wash, and degradation of nearshore habitats. In addition, consistent with CEQA Guidelines § 15130, the EIR should evaluate the cumulative impacts of the existing and proposed ferry system—currently 10 terminals and potentially up to 26 in the future—on shoreline integrity and water quality throughout the Bay. Repeated vessel activity can contribute to long-term habitat degradation, reduced water clarity, and the loss of biologically important intertidal zones, particularly in shallow or enclosed areas.

Best regards,
Erin Diehm

REVIEW SUMMARY

NOISE POLLUTION

The soundscape of the Anthropocene ocean

Carlos M. Duarte*, Lucille Chapuis, Shaun P. Collin, Daniel P. Costa, Reny P. Devassy, Victor M. Eguiluz, Christine Erbe, Timothy A. C. Gordon, Benjamin S. Halpern, Harry R. Harding, Michelle N. Havlik, Mark Meekan, Nathan D. Merchant, Jennifer L. Miksis-Olds, Miles Parsons, Milica Predragovic, Andrew N. Radford, Craig A. Radford, Stephen D. Simpson, Hans Slabbekoorn, Erica Staaterman, Ilse C. Van Opzeeland, Jana Winderen, Xiangliang Zhang, Francis Juanes

BACKGROUND: Sound is the sensory cue that travels farthest through the ocean and is used by marine animals, ranging from invertebrates to great whales, to interpret and explore the marine environment and to interact within and among species. Ocean soundscapes are rapidly changing because of massive declines in the abundance of sound-producing animals, increases in anthropogenic noise, and altered contributions of geophysical sources, such as sea ice and storms, owing to climate change. As a result, the soundscape of the Anthropocene ocean is fundamentally different from that of preindustrial times, with anthropogenic noise negatively impacting marine life.

ADVANCES: We find evidence that anthropogenic noise negatively affects marine animals. Strong evidence for such impacts is available for marine mammals, and some studies also find impacts for fishes and invertebrates, marine birds, and reptiles. Noise from vessels, active sonar, synthetic sounds (artificial tones and white noise), and acoustic deterrent devices are all found to affect marine animals, as are noise from energy and construction infrastructure and seismic surveys. Although there is clear evidence that noise compromises hearing ability and induces physiological and behavioral changes in marine animals, there is lower confidence that anthropogenic noise increases the mortality of marine animals and the settlement of their larvae.

OUTLOOK: Anthropogenic noise is a stressor for marine animals. Thus, we call for it to be included in assessments of cumulative pressures on marine ecosystems. Compared with other stressors that are persistent in the environment, such as carbon dioxide emitted to the atmosphere or persistent organic pollutants delivered to marine ecosystems, anthropogenic noise is typically a point-source pollutant, the effects of which decline swiftly once sources are removed. The evidence summarized here encourages national and international policies to become more ambitious in regulating and deploying existing technological solutions to mitigate marine noise and improve the human stewardship of ocean soundscapes to maintain a healthy ocean. We provide a range of solutions that may help, supported by appropriate managerial and policy frameworks that may help to mitigate impacts on marine animals derived from anthropogenic noise and perturbations of soundscapes. ■

Changing ocean soundscapes. The illustrations from top to bottom show ocean soundscapes from before the industrial revolution that were largely composed of sounds from geological (geophony) and biological sources (biophony), with minor contributions from human sources (anthrophony), to the present Anthropocene oceans, where anthropogenic noise and reduced biophony owing to the depleted abundance of marine animals and healthy habitats have led to impacts on marine animals. These impacts range from behavioral and physiological to, in extreme cases, death. As human activities in the ocean continue to increase, management options need be deployed to prevent these impacts from growing under a "business-as-usual" scenario and instead lead to well-managed soundscapes in a future, healthy ocean. AUV, autonomous underwater vehicle.

REVIEW

NOISE POLLUTION

The soundscape of the Anthropocene ocean

Carlos M. Duarte[1,2]*, Lucille Chapuis[3], Shaun P. Collin[4], Daniel P. Costa[5], Reny P. Devassy[1], Victor M. Eguiluz[6], Christine Erbe[7], Timothy A. C. Gordon[3,8], Benjamin S. Halpern[9,10], Harry R. Harding[11], Michelle N. Havlik[1], Mark Meekan[8], Nathan D. Merchant[12], Jennifer L. Miksis-Olds[13], Miles Parsons[8,7], Milica Predragovic[1], Andrew N. Radford[11], Craig A. Radford[14], Stephen D. Simpson[3], Hans Slabbekoorn[15], Erica Staaterman[16], Ilse C. Van Opzeeland[17], Jana Winderen[18], Xiangliang Zhang[19], Francis Juanes[20]

Oceans have become substantially noisier since the Industrial Revolution. Shipping, resource exploration, and infrastructure development have increased the anthrophony (sounds generated by human activities), whereas the biophony (sounds of biological origin) has been reduced by hunting, fishing, and habitat degradation. Climate change is affecting geophony (abiotic, natural sounds). Existing evidence shows that anthrophony affects marine animals at multiple levels, including their behavior, physiology, and, in extreme cases, survival. This should prompt management actions to deploy existing solutions to reduce noise levels in the ocean, thereby allowing marine animals to reestablish their use of ocean sound as a central ecological trait in a healthy ocean.

Soundscapes, defined as "ambient sound in terms of its spatial, temporal, and frequency attributes, and the types of sources contributing to the sound field" (*1*), are changing rapidly in the Anthropocene. In contrast to the long-standing recognition of the effects of anthropogenic sound in terrestrial systems (*2*), the impacts of changing ocean soundscapes on marine animals have received relatively limited attention. This neglect percolates reviews of cumulative stressors (*3*, *4*) and drivers of global change in the ocean (*5*, *6*), as well as scientific assessments (*7*) and policy frameworks [United Nations Convention on Biological Diversity (UNCBD), UN Convention for the Law of the Sea (UNCLOS), UN Sustainable Development Goals (UN SDGs)] aimed at improving ocean conservation and sustainability. Given the rapid pace of change in ocean soundscapes, we argue that there is an urgent need to assess the evidence for impacts of anthropogenic noise on marine life, which will enable policy frameworks to mitigate human impacts on ocean soundscapes as a necessary foundation for a healthy ocean.

Here, we review how the changing ocean soundscape of the Anthropocene is affecting marine life. We do so by first summarizing our current understanding of the importance of sound to marine animals and the components and ecological relevance of undisturbed ocean soundscapes. We show how ocean soundscapes are changing in the Anthropocene and assess, on the basis of a systematic review of four decades of published research, the evidence for the resulting impacts on marine animals. We then discuss how available solutions, if supported by appropriate managerial and policy frameworks, may help mitigate impacts on marine animals that arise from anthropogenic noise and perturbations of soundscapes.

Hearing the ocean soundscape

Sound propagates relatively fast and far under water, carrying information over greater spatial scales than most other sensory cues such as light or chemicals (*8*). As a result, marine animals have evolved a wide range of receptors to detect sound, which have been well studied for marine mammals but have been only recently described for invertebrates, such as jellyfish (*9*, *10*) (Fig. 1). Hearing in marine animals (Fig. 1) ranges from marine invertebrates, fishes, and reptiles, which perceive sounds of relatively low frequency (generally <5 kHz), to cetaceans, which can detect high-frequency (up to 200 kHz) sound (Figs. 1 and 2B). The hearing range of marine animals is a key determinant of their potential responses to different components of ocean soundscapes and their vulnerability to impacts from different sources of underwater noise (Fig. 2B).

Before the Industrial Revolution, ocean soundscapes were largely composed of sounds from geological (geophony) and biological sources, produced both intentionally and unintentionally (biophony), with minor contributions from human sources (anthrophony). Understanding the contexts and relative contributions of these sound sources provides key insights into how anthropogenic changes to ocean soundscapes may affect marine life and the overall health of the ocean.

Weather conditions and geological processes make important contributions to marine soundscapes. Wind blowing over the ocean, waves breaking, rain or hail falling onto the sea surface, and gas bubbles vibrating, rising, and bursting at the surface all generate characteristic sound spectra [(*11*, *12*); Fig. 2A]. In polar regions, seasonal processes like ice melting, pressure cracking, and iceberg calving dominate soundscapes (*13*), and noise from earthquakes, undersea volcanoes, and hydrothermal vent activity (*14*) potentially propagate thousands of kilometers [(*15*); Fig. 2A]. Each of these geophonic components produces sound over different frequencies and spatial and temporal scales (Fig. 2A), which is, therefore, perceived differently by various types of animals (Fig. 2B).

Marine animals intentionally produce sounds ranging from infrasonic (<20 Hz) to ultrasonic (>20 kHz), although most are emitted between 10 Hz and 20 kHz and are audible to a wide range of taxa (Fig. 2B). These sounds may be frequency and/or amplitude modulated and can be emitted as single pulses or occur in regular sequences or temporal patterns, such as pulse trains of fish calls and melodic phrases of whale songs. The continuous singing of single individuals, the gregarious chorusing of a group, or the collective sounds of some animals foraging or moving (e.g., urchins or crabs across a reef) can increase sound levels in particular frequency bands. Biophony may also be modulated by changes in weather, currents, and other factors, exemplified by the cessation of fish chorusing due to the passage of a hurricane (*16*).

Animals produce sounds for a range of reasons, including navigation, foraging, agonistic displays, territorial defense, mate attraction, and reproductive courtship (*17*–*19*). For example,

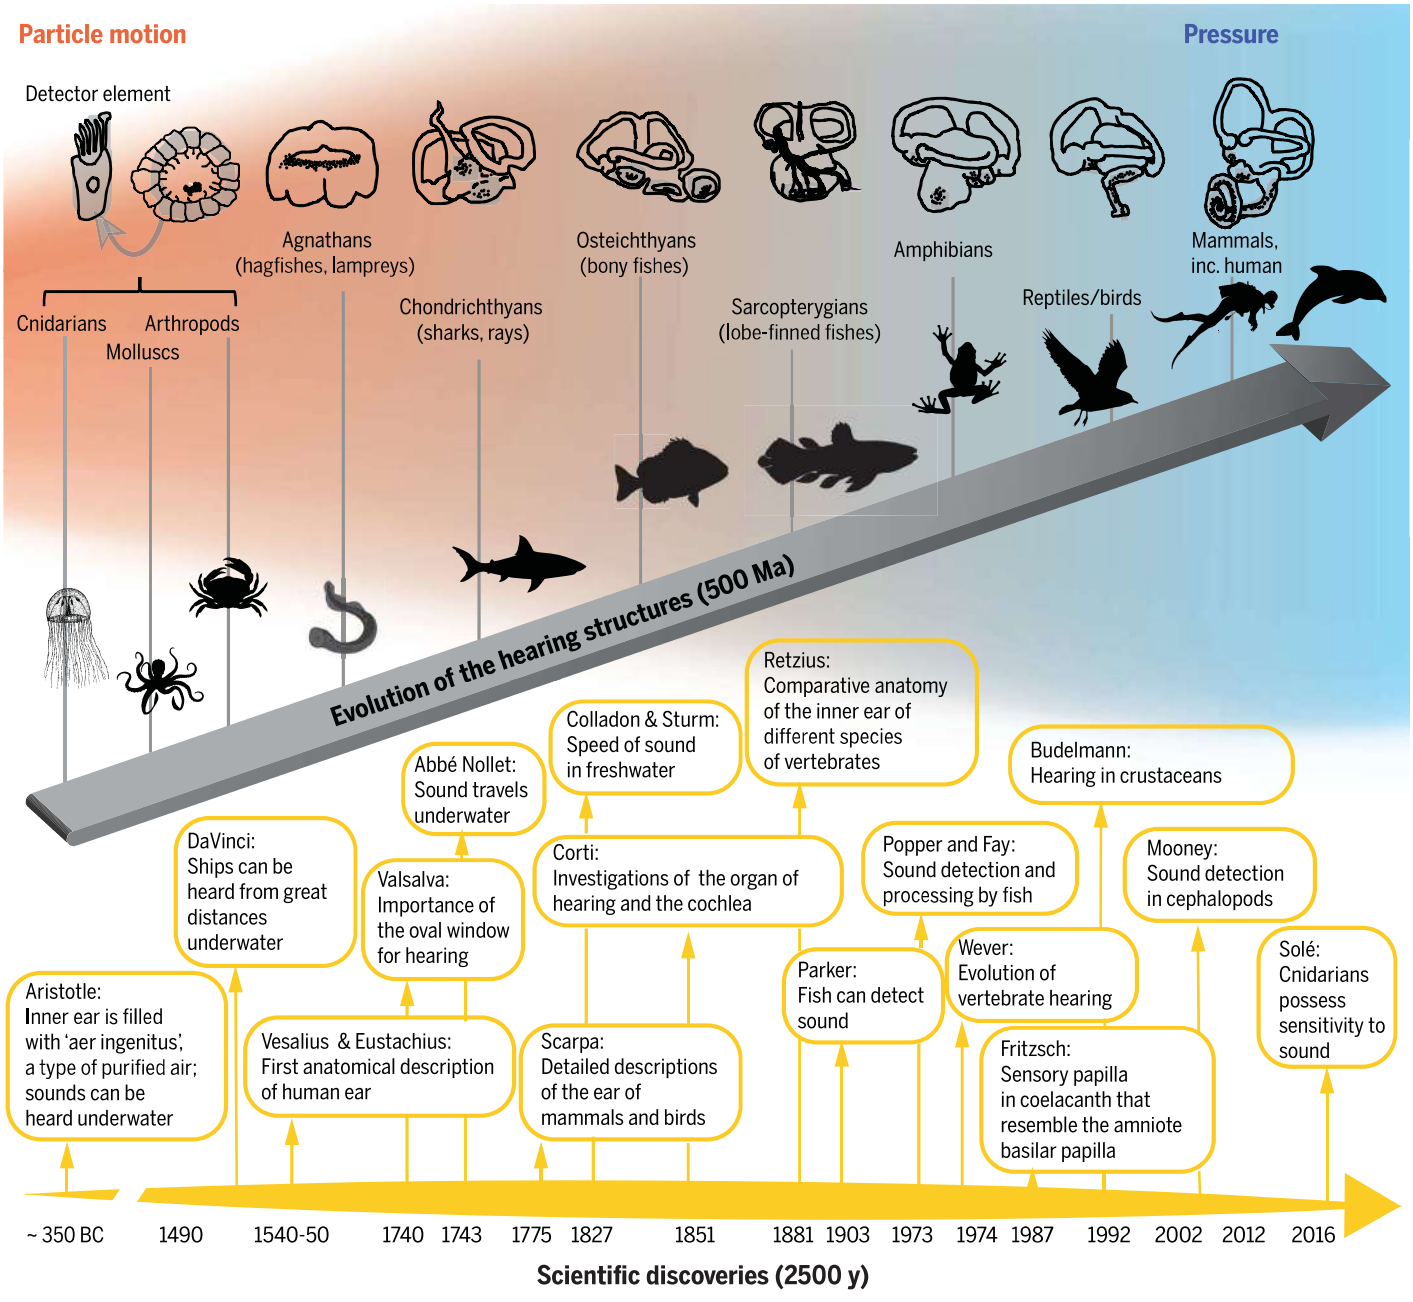

Fig. 1. Evolution of hearing under water and timeline of scientific advances. Evolution and timeline events are from (*129*). Hair cells as a mechanosensory receptor for hearing appeared early in the evolution of animals (*10*), evolving from invertebrate statocysts, which detect gravity and vibrations underwater, to fish ears, which perceive sounds of relatively low frequency (<5 kHz). Some bony fishes (Osteichthyes) have evolved ancillary hearing structures that connect the ear with the swim bladder, increasing hearing bandwidth and sensitivity (*25*). When marine tetrapods moved onto land, acoustic organs, adapted to hearing sound as pressure waves (*89*), evolved to compensate for communication in air, a lower-density medium, which slowed the movement of sound waves relative to water. Impedance-matching structures, or tympanic middle ears, appeared independently in reptiles, birds, and mammals (*90*), increasing the overall sensitivity of hearing to exceed, in some mammals, 50 kHz. Further changes in the pressure-sensing ear occurred as reptiles and mammals returned to the ocean (*130*). In toothed whales, the middle ear evolved to receive sound passing through the fatty tissues in the jaws, an effective means of conduction that increases the upper hearing limit of these mammals to 200 kHz (*131*). Ma, million years ago; y, years.

male toadfish guard benthic nests and produce "hums" to attract females, rendering these sounds key components of some night-time soundscapes [e.g., (*20*, *21*)]. Fishes—such as Atlantic cod (*Gadus morhua*), croakers (Sciaenidae), and groupers (Serranidae)—use sounds to gather in large aggregations and coordinate spawning activities (*22*–*24*). Marine mammals use vocal communication to aid in mating, rearing of young, and group cohesion, among other social (*25*) and feeding functions (*26*). Pinnipeds produce sounds both in air and under water that are associated with territorial and mating behavior, particularly during the breeding season (*27*). Bearded seals (*Erignathus barbatus*), for example, produce frequency-modulated trills, which are a major component of Arctic soundscapes in spring (*28*). Baleen whales produce low-frequency reproductive and social calls that can travel across ocean basins (*29*), with humpback whales

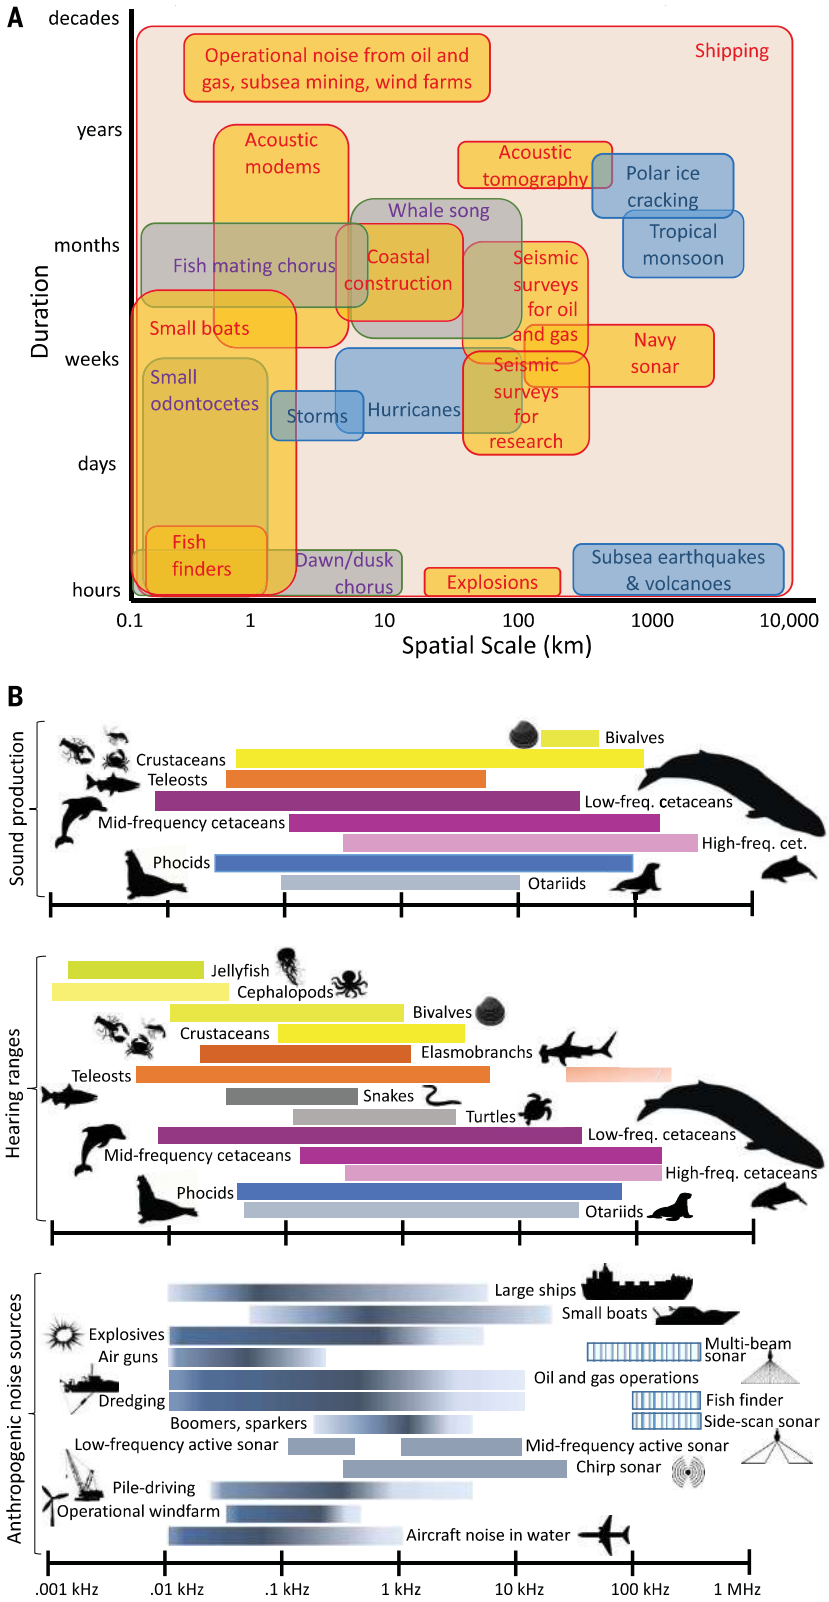

Fig. 2. Sources and animal receivers of sound in the ocean soundscape. (**A**) Stommel diagram showing the spatial extent and duration of selected biophony (rounded gray squares), geophony (rounded blue squares), and anthrophony (rounded yellow squares) events. Events (rounded squares) reflect the spatial and temporal period over which signals or bouts of signals typically occur. Although some sound sources, such as those used in hydrographic surveys, do not propagate particularly far, survey efforts can cover a large spatial extent (an entire Exclusive Economic Zone). "Dawn/dusk chorus" refers to the daily sounds produced by a collection of species (e.g., fish, snapping shrimp). Shipping noise encompasses the full range of spatial and temporal scales. (**B**) Approximate sound production and hearing ranges of marine taxa and frequency ranges of selected anthropogenic sound sources. These ranges represent the acoustic energy over the dominant frequency range of the sound source, and color shading roughly corresponds to the dominant energy band of each source. Dashed lines represent sonars to depict the multifrequency nature of these sounds. Sources for the data displayed in the figures are (*9*, *18*, *25*, *53*, *75*, *83*, *131*–*139*).

Downloaded from http://science.sciencemag.org/ on February 11, 2021

(*Megaptera novaeangliae*) singing complex songs as part of male reproductive displays that have regional dialects and change over time (*30*).

Marine animals also produce mechanical sounds, such as those produced by the impact of different body parts on environmental substrates (e.g., breaching, tail slaps), which often convey information about body mass and size (*31*) and movement and foraging behaviors (*32*, *33*). Sea urchins and parrotfishes, for example, make scraping or crunching sounds as a by-product of foraging that occur in predictable peaks associated with tidal or diurnal cycles (*34*, *35*). Other animals use sound to forage. Snapping shrimps produce a "snap" sound to stun prey, which creates a loud "crackling" sound that is present in many coastal habitats that support dense colonies of these shrimps (*36*). Odontocetes, such as sperm whales (*Physeter macrocephalus*) and various species of dolphins and porpoises, also possess sophisticated biosonar systems that produce sounds to echolocate, select, and pursue prey under water (*26*).

The diversity, composition, and density of the biophonic community are key components of the soundscape ecology paradigm, which seeks to identify habitats and assess their health status using sound. An ecological role for ocean soundscapes is supported by the fact that many species use ocean soundscapes as a cue to find their habitats at key life stages. For example, larvae and juveniles of some invertebrate and vertebrate reef species use soundscapes as a navigational cue to locate suitable settlement habitats (*37*). Indeed, the distinctive sound-producing structures or organs of marine animals provide, in many cases, an acoustic fingerprint that aids their identification within soundscapes, allowing for inferences on their identity, behavior, and sometimes relevant life history and physical traits (*38*–*40*).

Advances in acoustic-recording technology allow ocean soundscapes to be characterized for longer periods of time and at greater depths than previously possible (*36*). In parallel, new tools for soundscape analysis facilitate both species-specific call recognition and summative approaches to resolve the entire acoustic spectrum. Despite this progress, the paradigm that soundscapes can be used as proxies for ecosystem health, developed for terrestrial ecosystems (*41*), has been applied to the marine environment with only limited success [e.g., (*42*, *43*)]. In some cases, sound-pressure levels in low frequencies correlate positively with visual measures of fish diversity, coral cover, and invertebrate abundance (*44*, *45*). Efforts to reduce the dimensionality of a complex soundscape to a single number that reflects the diversity or complexity of a soundscape [e.g., (*46*)] may provide useful biological information (*27*, *42*) but cannot be readily generalized, because the results obtained are highly sensitive to parameterization (*47*). Instead, multiple indices relating to characteristics of individual sounds can be combined to provide an indication of the contribution of particular sound types (*48*). Overall, assessments of ocean soundscapes demonstrate a growing contribution of human activities across the ocean (Fig. 3).

The soundscape of the Anthropocene ocean

Human activity has altered biophony and geophony and has, either deliberately or as a by-product, added an increasingly prevalent third component—anthrophony—across a broad range of frequencies to ocean soundscapes (*2*) (Fig. 2B). Examples of deliberate human use of marine sound include seismic surveys that produce high-energy, low-frequency, short-duration sounds aimed at detecting the presence of petroleum and gas deposits below the seafloor, as well as multibeam echosounders and side-scan sonars that generally produce high-frequency sounds to map the seabed and

Downloaded from http://science.sciencemag.org/ on February 11, 2021

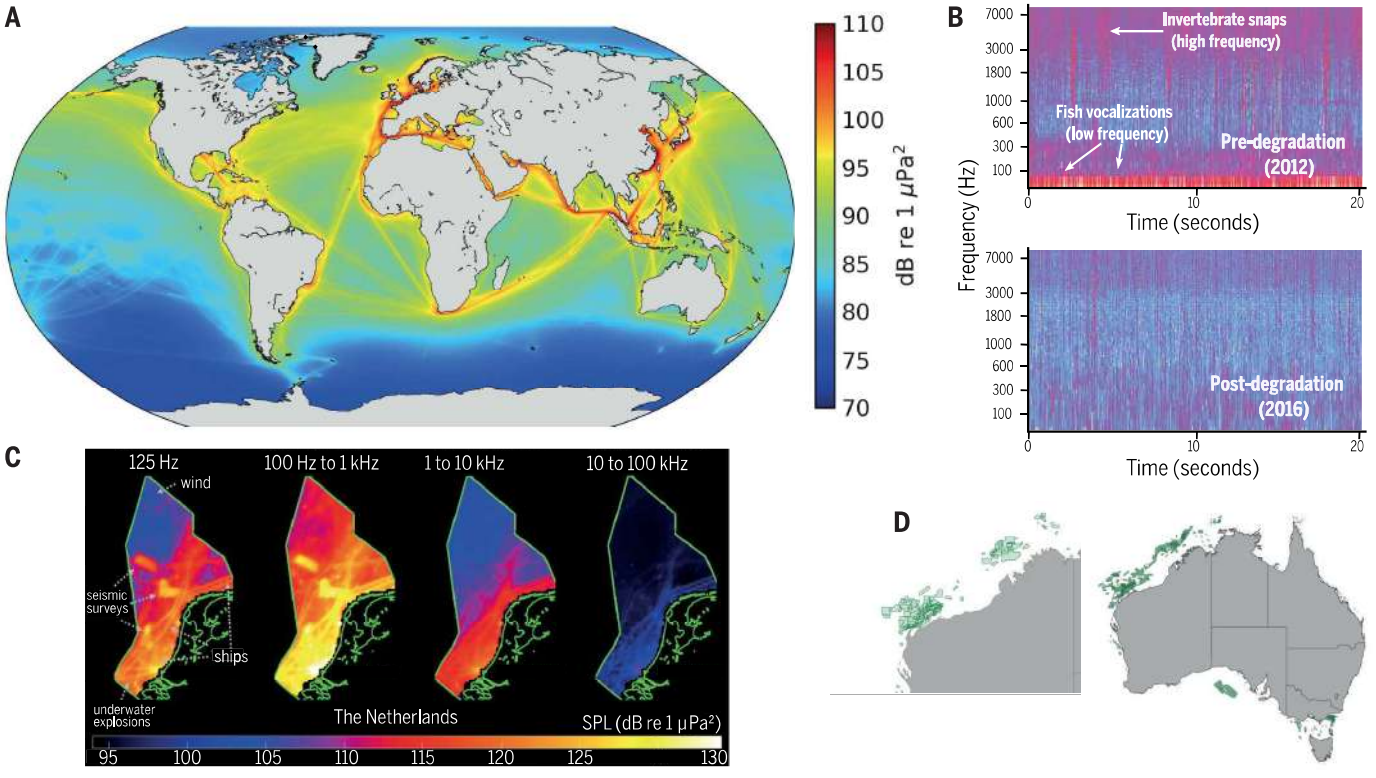

Fig. 3. Human pressures have altered ocean soundscapes at scales ranging from local to global. (**A**) Average sound level estimated globally from marine traffic (at 100 Hz), based on average shipping activity directed from automatic identification system (AIS) data for 2014. (**B**) Sound-pressure levels pre- and postdegradation at sites around Lizard Island in the Great Barrier Reef (*62*). (**C**) Sound levels in four different frequency bands in the Dutch North Sea, averaged over 2 years [adapted from (*140*)]. (**D**) Boundaries of three-dimensional seismic surveys in northwest Australia (left) and seismic lines of two-dimensional surveys in all Australian waters (right) since 1973 (data from wapims.dmp.wa.gov.au/wapims and https://nopims.dmp.wa.gov.au/nopims).

detect organisms and particles in the water column. These sensing techniques are, at times, a major component of present ocean soundscapes in many areas, especially those holding oil and gas reservoirs (*49*, *50*), such as the continental shelf of northwestern Australia and the North Sea (Fig. 3D). Across the ocean, scientific surveys use similar tools to map the seabed and identify geological features, fishers use "fish finders" to search for schools of fish, and navies use active sonars across a range of frequencies to detect submarines and other targets.

Much of anthrophony is an unintended by-product of human activities (Figs. 2 and 3), which are intensifying across the ocean. Over the past 50 years, increased shipping has contributed an estimated 32-fold increase in the low-frequency noise present along major shipping routes (*51*) (Figs. 2 and 3). Vessel noise is prominent in many ocean regions even away from major shipping lanes, owing to long-range sound propagation at low frequencies, although some areas display stable or even decreasing sound levels in targeted frequency bands (*52*). Whereas vessel noise does not propagate as far in shallow coastal waters, the higher vessel concentration often increases noise considerably above ambient levels in coastal regions.

Further anthrophony comes as an unintended by-product of less frequent, but still common, human activities associated with coastal development and resource extraction. Traffic on structures like bridges and airplanes flying at low altitude over the ocean produce low-level, continuous noise that can penetrate under water (*53*). Pile-driving during the construction of offshore wind farms can substantially increase local sound levels (*54*), but the operational noise of turbines tends to attenuate below ambient levels of natural sound within a few hundreds of meters of wind farms (*55*). Similarly, construction and operation of oil and gas infrastructure (e.g., platforms, pipelines) increase anthrophony (*56*). The dynamic positioning systems (i.e., propellers and thrusters) used to maintain the position of offshore structures, such as drilling platforms, produce low-frequency noise (*57*). Technology that scrapes the bottom of the ocean—whether dredging the seafloor, harvesting minerals, or trawling for fisheries—also generates low-frequency noise (*58*). Dynamite fishing, designed to stun or kill reef fish for easy collection, remains a major source of blasting noise in Southeast Asia and coastal Africa, and controlled detonation of bombs dropped on the seafloor during World War II continues, more than 70 years later, to be a major source of disruptive and destructive sound in the North Sea (Figs. 2 and 3). Explosions of mines, missiles, and bombs during naval warfare or military exercises also represent a source of destructive sound. On a small scale, even coastal recreational activities—such as small motorboats, swimming, SCUBA diving, surfing, paddling, flying unmanned aerial vehicles (drones), or fireworks—contribute anthrophony to marine soundscapes (*59*–*61*).

Humans have also profoundly altered biophony and geophony in ocean soundscapes. Hunting of large marine animals, particularly highly vocal whales and pinnipeds, which began hundreds of years ago, has led to reduced and less diverse biophony in ocean soundscapes of the present. Sound levels of natural soundscapes decrease with the degradation of kelp forests, seagrass beds, coral reefs, and sponge beds, owing to fewer vocalizing animals (*62*–*66*). Biophony may also be reduced where soundscapes are heavily polluted by anthrophony as animals cease vocalizing or are displaced from ecosystems.

Climate change is increasing the number of cyclones and marine heatwaves that degrade marine habitats, which, in turn, may alter biophony. For example, degradation of coral reefs associated with these events dramatically changes ambient soundscapes, with the altered composition of the biotic community reflected in reduced overall acoustic energy and the complexity and diversity of reef soundscapes (*46*). Changes in the distributions of species with ocean warming also shift biophony. For example, reduced sea ice in the Arctic allows the range expansion of temperate whale species that compete for acoustic niche space with Arctic species, such as beluga whales (*Delphinapterus leucas*) (*67*). In addition, climate change directly affects the temperature, heat content, and stratification of the ocean, with sound traveling faster in a warmer ocean, to the extent that long-range acoustic transmissions have been used to measure large-scale ocean temperature and heat content—a phenomenon that W. Munk termed "the sound of climate change" (*68*). Ocean warming also affects geophony in polar areas through decreasing sea ice cover, with the soundscape of a progressively ice-free Arctic Ocean departing from that of the ice-covered Arctic Ocean of the past (*69*, *70*). High sound levels occur during periods of ice formation, whereas polar soundscapes are very quiet in the high-frequency range during periods of solid ice coverage (*71*). Ice-free waters will also likely lead to increased anthrophony through greater ease of human access and activity (shipping, fishing, and seismic surveys) in a warming Arctic Ocean. An increased inflow of shallow "tongues" of warm, salty Pacific and Atlantic waters into the Arctic Ocean is also dramatically altering the acoustic environment by creating a local maximum in the sound speed profile at the depths between 100 and 200 m. This water layer acts as a strong acoustic duct, channeling sound across distances of 80 to 100 km (*69*), with comparable effects reported in coastal areas receiving glacial melt waters. In the tropics, climate change may increase geophony levels because of increased winds, rainfall on the surface, and waves as the energy of tropical storms increases. Greenhouse gas emissions also change sound propagation in the ocean by decreasing pH as CO_2 levels increase, which is expected to lead to a noisier ocean, owing to substantial decreases in ocean sound absorption for frequencies lower than about 10 kHz (*72*, *73*).

Impacts of altered soundscapes in the Anthropocene ocean

Initial awareness of the impacts of the altered soundscapes of the Anthropocene ocean on marine life derived from evidence of injuries from high-intensity noise. This initial evidence focused on large iconic marine mammals (*25*) but has been expanded to include links between noise from military sonar, air guns, submarine explosions, and seismic surveys and hearing disabilities, mass strandings, and mortality of a number of marine animals (table S2).

Research on the ecological impacts of anthrophony has expanded to address the pervasive and prevalent impacts of chronic exposure to noise across vast spans of the ocean [table S2; (*74*)] and the potential impacts of anthropogenic noise on fishes (*75*–*79*), invertebrates (*80*, *81*), and whole marine ecosystems (*82*). Anthropogenic noise can interfere with natural auditory signal processing by marine animals, an effect termed "masking" (*83*), which reduces their communication space [see (*84*) for marine mammals, (*85*) for fishes]. Indeed, anthropogenic noise overlaps with the frequency band of hearing of marine animals across increasingly broad areas of the ocean (*86*–*88*) (Fig. 2). Masking of signals from conspecifics or environmental cues indicating the presence of prey or predators may result in loss of social cohesion, missed opportunities for feeding, or failure to avoid a predator (*25*).

The frequency content of vessel noise (Fig. 2) overlaps considerably with the hearing ranges of marine fauna (*20*), particularly those with sensitivity in relatively low-frequency ranges [e.g., fishes, some marine mammals, and reptiles (*20*, *25*, *89*–*91*)], where most of the noise energy lies. Shipping noise has been reported to disrupt traveling, foraging, socializing, communicating, resting, and other behaviors in marine mammals (*84*); attenuate antipredator behavior of young fishes, leading to increased mortality and reduced ability to learn to avoid predators in future encounters (*79*); and impact the settlement and development of invertebrates (*85*). A concurrent increase in anthrophony and decrease in biophony with habitat degradation and declines in populations of marine species also likely affects onshore

Downloaded from http://science.sciencemag.org/ on February 11, 2021

larval movement patterns, and hence settlement success, across a range of species.

Given the potential for anthropogenic noise to detrimentally affect marine animals (*82*, *92*, *93*), we examined the robustness and consistency of the evidence for impacts of anthrophony and other human alterations to ocean soundscapes on marine animals through a systematic assessment of the results on this topic presented in the published literature (*94*). This generated a total of 538 studies that attempted to quantify the effects of anthropogenic noise and perturbations of soundscapes on marine animals. We adopted the confidence scale of the Intergovernmental Panel on Climate Change (IPCC) (*95*) to reflect the robustness of the evidence supporting various statements on the extent of the impacts.

There was high confidence that anthropogenic noise negatively affected marine animals (Fig. 4 and table S4). The evidence was strongest for marine mammals, for which 85 to 94% of quantitative studies found significant effects, with 82 and 81% of studies finding significant impacts on fishes and invertebrates, respectively, and the two studies available for reptiles and one of the two studies on marine birds reporting significant impacts on these animals (Fig. 4 and table S4). Noise from vessels (94.9% report significant impacts), sonars (90%), and acoustic deterrent devices (91%) negatively affects marine animals, as does noise from energy (8.23% of studies) and construction infrastructure (82.3%) and seismic surveys (74.4%) (Fig. 4 and table S4). Available data provide ample evidence that noise pollution compromises hearing ability (90.6% of studies report significant impacts), induces physiological changes (91.2%), and elicits evasive actions and displaces marine animals (83.9%) (Fig. 4 and table S4). By contrast, evidence for impacts of anthropogenic noise on mortality and fitness of marine animals is weaker, with 35.2 and 50% of studies reporting significant impacts, respectively (Fig. 4 and table S4). All quantitative studies conducted thus far provide evidence that changes in biophony reduce the settlement of marine larvae, but the number of quantitative studies testing impacts on settlement remains limited (n =7; table S4).

Our assessment revealed that despite the large volume of literature on the impacts of anthropogenic noise on marine animals, there is a paucity of quantitative assessments for diving marine reptiles and seabirds and only a limited number of studies on pinnipeds and sirenians (Fig. 4). Likewise, the evidence supporting that changes in biophony resulting from habitat degradation reduce the settlement of marine larvae on preferred habitats was weakened by the few studies available. The evidence for impacts on animals exposed to multiple sources of anthropogenic noise was also small, limiting the assessment for cumulative impacts. In addition, we found a very limited number of studies testing the effectiveness of mitigation measures, which makes it difficult to provide confidence on their performance. This may preclude these mitigation measures from being adopted by national and international policies aimed at reducing the impacts of anthropogenic noise on marine life. The gaps identified in our systematic review underscore areas where research efforts should focus to provide a comprehensive understanding of the impact of anthropogenic noise on marine animals, integrate these impacts to assess population-level consequences from chronic exposure to anthropogenic noise, and deliver effective mitigation measures.

In addition to controlled experiments, global disruptions offer an opportunity for serendipitous observations of the effect of anthropogenic noise on marine life at scale. For instance, reduced ship traffic in the Bay of Fundy, Canada, after the events of 11 September 2001 resulted in a 6-dB decrease in underwater noise, particularly at frequencies less than 150 Hz, with some evidence suggesting that this reduced stress in right whales (*Eubalaena glacialis*) (*96*). Likewise, strategies to combat

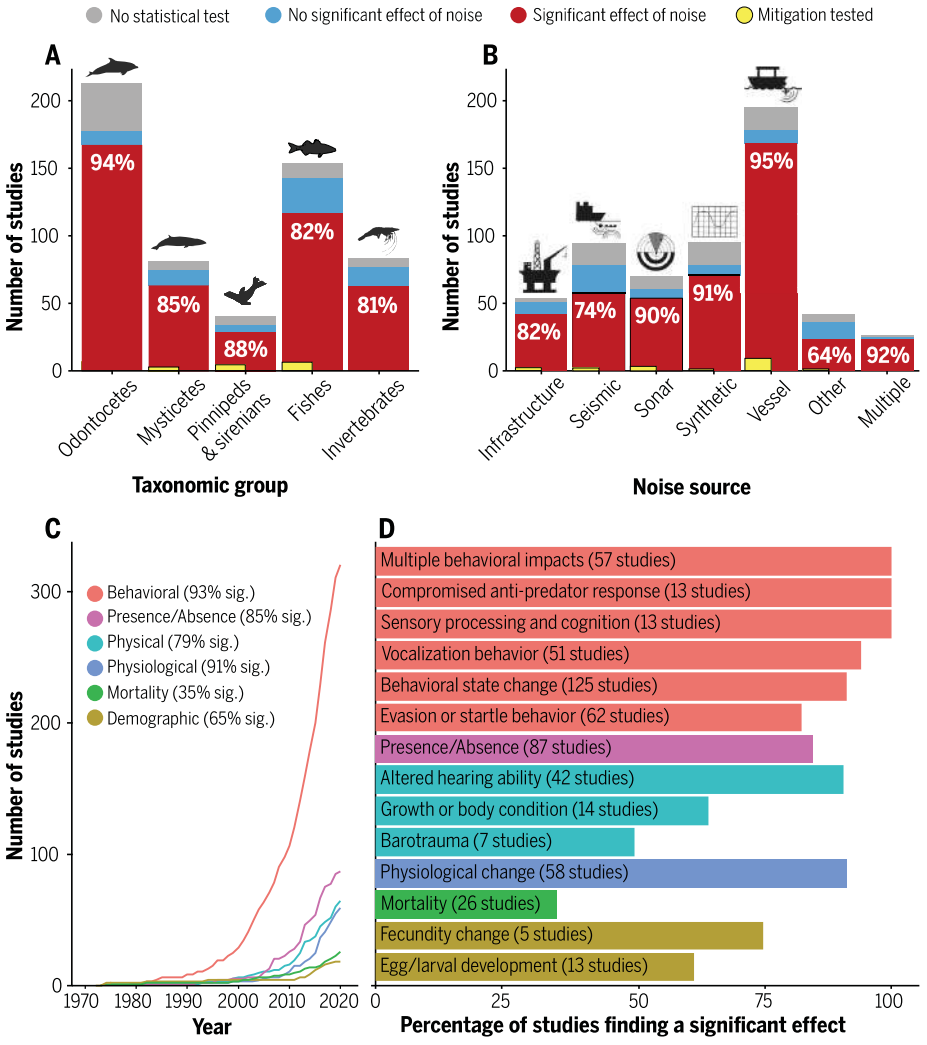

Fig. 4. Synthesis of the negative impacts of noise pollution on marine animals present in the literature. The estimates provided here derive from a systematic literature review [(*74*), compare supplementary materials]. (**A** and **B**) Total number of studies found, split by (A) taxa (excluding birds and reptiles, which together accounted for only six studies) and (B) noise source. Colors indicate the proportion of different statistical outcomes (red, significant negative effect of noise; blue, no significant effect of noise; gray, no statistical test) and the proportion of studies that seek to directly test the impact of noise-mitigation strategies such as bubble curtains and altered engine types (yellow). White numbers indicate the percentage of studies with a statistical test (red plus blue) that find a significant effect of noise (red). (**C**) Cumulative frequency curves over time of all studies, split by effect category. Searches were carried out from 1900 to 2020, but no records that met the criteria were found before 1973. (**D**) The percentage of studies in each subcategory that found a significant effect of noise, calculated as a fraction of the total number of studies with a statistical test.

Downloaded from http://science.sciencemag.org/ on February 11, 2021

COVID-19 infections, which involved confinement of about 58% of the global human population, have also provided ample evidence of an unusual expansion of the movements of marine mammals and sharks to what were previously busy, noisy waterways, such as harbors and coastal urban areas, where they are not regularly seen (*97*). This unusual behavior has been linked to reduced anthropogenic noise during human confinement (*98*, *99*).

Marine animals may recover from and cope with intense anthropogenic noise through avoidance behavior or habituation (*100*, *101*). The former behavior is a common response of marine animals to potentially damaging or disruptive levels of anthrophony but may displace species from important foraging grounds (*100*) and is not always possible for species that have high site fidelity and small biogeographical ranges, such as the critically endangered Maui dolphin (*Cephalorhynchus hectori maui*) (*102*), or slow-moving species, like benthic invertebrates, which have a limited scope to avoid noise. When hearing damage occurs from loud noises, fish may recover better than marine mammals because hair cells regrow in fish but are unlikely to regenerate in mammals (*103*). Avoidance behavior by fish in response to the approaching sound of fishing vessels is well documented (*103*). However, this may also be induced by sounds from recreational boats, resulting in flight responses and interruption of foraging, reproductive, or vocalizing activities (*104*). Conversely, it is possible that some predatory marine mammals and large fishes may use the sound of vessels as a "dinner bell" alerting of opportunities to depredate catch from fishing boats (*105*, *106*). These examples provide evidence for behavioral plasticity or acclimation but do not provide evidence for evolutionary adaptation, which requires observational time scales that have not yet been achieved in soundscape ecology.

Marine mammals may adapt to anthrophony, but the long life span and large home ranges of many marine mammals render assessment of adaptations to noise challenging. For instance, some mammals—such as killer whales (*Orcinus orca*), right whales (*Eubalaena* spp.), and Guiana dolphins (*Sotalia guianensis*)—and fishes have been shown to alter the source level or frequency of vocalizations in order to be heard, a phenomenon known as the Lombard or cocktail party effect (*107*–*110*). Habituation, in the form of increasing tolerance, has been demonstrated for some species of marine mammals and fishes (*101*, *111*). In some situations, habituation may be considered a reduced response to stimuli that have no biological importance on the individual being observed (*112*), although disturbance involving a sensory modality that is so fundamental to most marine animals would not often be considered inconsequential.

Although our assessment shows that anthropogenic noise detrimentally affects marine animals, a lack of global syntheses of data has resulted in it being typically ignored in reviews of cumulative and/or global impacts of anthropogenic stressors on marine life (*3*, *5*, *6*, *113*) and consequently by the high-level policy initiatives (e.g., UNCBD, UNCLOS, UN SDGs) that these analyses inform. For instance, the draft of the UN Law of the Sea "BBNJ" Agreement on Biodiversity in Areas Beyond National Jurisdiction (*114*) does not mention noise among cumulative impacts, despite mandating an environmental impact assessment of activities in the high seas and the fact that anthropogenic noise was discussed at its 19th session of the process in June 2018. The last assessments of climate change impacts by the IPCC (*115*) have yet to acknowledge the impacts that climate change has on ocean soundscapes, whereas the recent IPCC report on oceans and the cryosphere acknowledges noise only in the context of increased human operations in the Arctic Ocean (*116*). Our review of existing evidence (Fig. 4) shows that anthropogenic noise should be included in assessments of cumulative pressures on marine ecosystems. Encouragingly, the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) assessment acknowledges the role of shipping noise as a pollutant affecting marine life (*117*), but it makes no attempt to rank its contribution compared with other human impacts in the context of multiple stressors in the marine environment.

Pathways to healthy ocean soundscapes

Most anthrophony is "noise" in a biological sense, because it is an unnatural and unwanted signal. The evidence reviewed here shows that the impacts of human alterations to ocean soundscapes are pervasive across all ocean areas and detrimentally affect marine life (Fig. 4 and table S4). Anthropogenic noise is thus a pollutant that cannot be ignored and must be addressed in policies to mitigate human impacts on the oceans. This is particularly urgent given the growing focus on the ocean-based economy, which is forecasted to double its contribution to global gross domestic product by 2030 (*118*). This economy includes many new industries, such as deep-sea mining, that may be major sources of underwater noise. A "business-as-usual" development of the ocean-based economy will inevitably lead to ever-increasing noise from more shipping, coastal development, seismic surveys, military operations, dredging, pile driving, and deep-sea mining, likely contributing to increasing impacts on marine biota (Fig. 4). Yet, the High Level Panel for a Sustainable Ocean Economy (www.oceanpanel.org) has not considered anthropogenic noise in either of the Blue Papers addressing different dimensions of actions required to achieve SDG14 (www.oceanpanel.org/blue-papers), including that on integrated ocean management (*119*). The postponement, owing to COVID-19, of the UN Oceans Conference to 2021 provides an opportunity to consider the evidence summarized here, showing that the contribution of noise pollution to the declining status and health of ocean ecosystems is likely substantial [Fig. 4; (*120*)]. This is particularly timely, given that 2020—and now, because of COVID-19, 2021—is the International Year of Sound (sound2020.org). There are, however, solutions that can lead to healthier ocean soundscapes in the context of a sustainable ocean economy.

Improved human stewardship of ocean soundscapes requires regulatory frameworks designed to manage sound within exclusive economic zones and the high seas and promote the deployment of available technological solutions to reduce noise introduced by human operations in the marine environment. Because species-sensitivity distribution models (*120*) have not yet been generated, alternative approaches for the regulation of anthropogenic noise must be developed. However, unlike other sources of pollution, anthropogenic noise is not persistent in the environment once sources are removed. Consequently, legislative actions to reduce anthropogenic noise and incentivize the deployment of existing technological solutions can have near-immediate, positive effects.

It may be easier to instigate noise reduction of activities that produce sound as a by-product (e.g., shipping, construction), rather than intentionally (e.g., seismic surveys, military activities), through technological and/or regulatory measures, as demonstrated by recent progress in the shipping industry. In 2014, the International Maritime Organization approved voluntary guidelines for reducing underwater noise from commercial ships (www.imo.org/en/MediaCentre/HotTopics/Pages/Noise.aspx). These guidelines focused on design features that could reduce the primary sources of underwater noise, namely the propellers, hull form, and on-board machinery. Following these guidelines, in 2015, Maersk underwent a retrofit of five large container ships and found that reducing propeller cavitation decreased low-frequency sound pressure levels by 6 to 8 dB while improving fuel efficiency (*121*). In addition, the growing use of advanced materials, such as fiber-reinforced polymer composites, which have good dampening properties and are also lighter—thereby requiring less energy for propulsion—can also help to reduce ship noise. Another potential noise-reduction method is the use of electric motors which, with the development of solar power and

Downloaded from http://science.sciencemag.org/ on February 11, 2021

battery storage, are increasingly installed on larger vessels (*122*). Although such technological improvements are promising, it is the ship-building companies, not necessarily the shipping companies, that need to adopt them, and there is currently no regulatory mechanism to incentivize a transition (*123*).

The cross-boundary nature of marine ecosystems and some sound sources (e.g., shipping) means that international cooperation is key. Yet, a review of 10 major international agreements that address noise (*124*) showed that all but one are voluntary in nature or offer both binding and nonbinding options for member nations; the exception is the European Union's Marine Strategy Framework Directive (MSFD), which explicitly includes noise as a stressor and mandates that European Union member states monitor and mitigate noise pollution as part of their efforts to obtain "good environmental status." A likely reason for the noncommittal nature of international agreements that address marine noise is the absence of a compelling assessment of the evidence of impacts, which we now provide (Fig. 4). Therefore, we hope that the strong evidence summarized here will increase the ambition of national and international policies that regulate marine noise to achieve soundscapes conducive to healthy oceans across exclusive economic zones and the high seas.

Meanwhile, regulating the speed and routes of ships can help reduce noise and/or divert impacts away from biologically sensitive areas. For example, reducing steaming speeds for noisy vessels in the major shipping route(s) in the eastern Mediterranean from 15.6 to 13.8 knots led to an estimated 50% reduction in the broadband noise from these vessels between 2007 and 2013 (*125*). A recent assessment estimated that half of the total noise radiated by the shipping fleet comes from just 15% of the ships, particularly those with source levels above 179 dB re 1 μPa at 1 m [i.e., relative to the reference pressure of 1 μPa root mean square (*126*)]. Thus, a targeted approach with focused incentives could substantially reduce shipping noise. Marine construction, particularly for offshore wind farms, is achieving rapid advancements in noise-dampening technology. Acoustic barriers like bubble curtains and noise-abating sleeves have been introduced in some European wind farms and can reduce sound from pile driving by up to 15 dB (*127*). Indeed, both the European Union's MSFD and the U.S. National Marine Fisheries Service encourage the use of such technologies. Finally, the E&P Sound and Marine Life Programme, funded by a number of oil and gas companies, has invested in developing alternative technologies to seismic air guns (www.soundandmarinelife.org/). Marine vibrators ("vibroseis") produce sounds that are nonimpulsive and more narrow band in frequency than typical seismic air guns, potentially removing some of the more harmful acoustic attributes. Several companies are developing prototype vibroseis technology to be mounted on submarine vehicles that would roam the seafloor. These vehicles will use hydraulic systems to generate force waves that penetrate the sediments and deliver the required data while avoiding impacts on animals in the water column (*128*). As environmental constraints and impacts of deep-sea mining are discussed, there is an opportunity to design instruments and procedures that avoid impacts from noise before commercial operations begin (*128*).

Mitigating climate change in accordance with the most ambitious goals set by the Paris Agreement (https://unfccc.int/process-and-meetings/the-paris-agreement/the-paris-agreement) will also help reduce further impacts from climate change on geophony and biophony. However, the recent IPCC assessment of climate change impacts on oceans and the cryosphere indicates that sea ice will continue to decline, affecting soundscape features, and coral reefs will continue to degrade even if those climate goals are met (*116*), affecting biophonic components.

Sound is a fundamental component of the sensory environment of marine ecosystems, with animals across a broad range of taxa—from jellyfish to marine mammals—perceiving and using sound throughout their life history. Global industrialization of the ocean has led to the rise of anthrophony, whereas human impacts on marine species and ecosystems and the climate system have led to a decline in biophony and alterations to geophony. Substantially modified ocean soundscapes, in turn, have widespread impacts on the ecology of the Anthropocene ocean. These impacts are pervasive, affecting animals at all taxonomic and trophic levels, and compounded with impacts from other stressors, such as ocean warming, acidification, habitat loss, and overfishing. Changing ocean soundscapes have become the neglected "elephant in the room" of global ocean change. In an era when societies increasingly look to the "blue economy" as a source of resources and wealth, it is essential that ocean soundscapes be responsibly managed to ensure the sustainable use of the ocean. Solutions to mitigate anthropogenic noise, both in terms of policy and technological measures, are becoming available but remain challenging (*123*, *124*). Incorporation of these solutions in internationally binding conventions would pave the way for ocean soundscapes that support healthier ecosystems under a sustainable ocean economy.

An anthropogenic cacophony

Sound travels faster and farther in water than in air. Over evolutionary time, many marine organisms have come to rely on sound production, transmission, and reception for key aspects of their lives. These important behaviors are threatened by an increasing cacophony in the marine environment as human-produced sounds have become louder and more prevalent. Duarte *et al.* review the importance of biologically produced sounds and the ways in which anthropogenically produced sounds are affecting the marine soundscape.

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Liza,

This email, sent in March 2022, called attention to issues arising from the very exposed location of the proposed WETA ferry dock. Most importantly, a loss of control event at a critical point of the ferry's approach to the dock could cause the ferry to run onto the rocks or collide with the Skate's restaurant, with considerable risk of injury or damage. The Berkeley Water Transportation Pier Ferry EIR must address this possibility.

- What is the probability of a loss of control (LOC) event in the ferries serving Berkeley?
- What would be the protocol for dealing with an LOC event in a ferry approaching the Berkeley WETA dock? E.g., rapid deployment of an anchor?
- What initial and ongoing training is necessary to ensure that the appropriate protocol is successfully followed whenever an LOC occurs?
- Alternatively, the ferry dock could be relocated inside the Marina or another sheltered location.

Assuming this major safety issue can be addressed, consider next the storms that would be expected every year,

- How often would storms with strong North or South winds require ferry service to be suspended?
- How would the service suspension be communicated to ferry patrons?
- What alternate transportation would be available and how would ferry patrons access it?
- Again, it would probably be best to locate the ferry dock in a sheltered area and avoid these service suspensions .

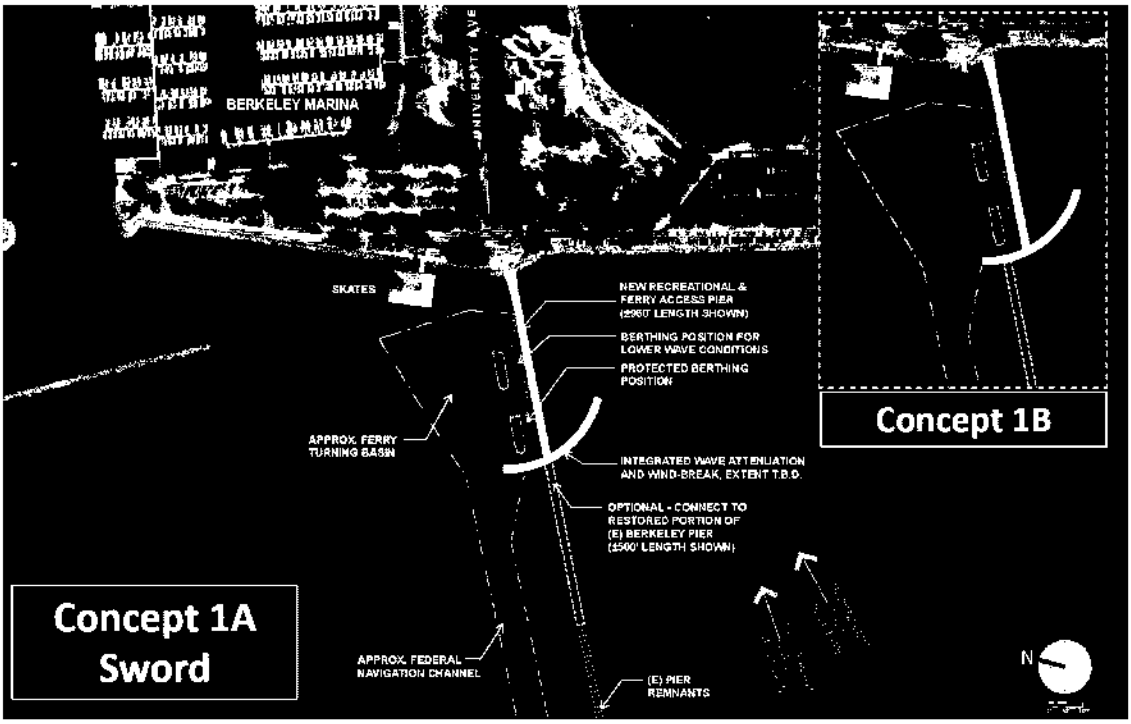
All,

The proposed location for the WETA ferry terminal in Berkeley is very challenging, and needs careful consideration and design.

Please read the attached document, and enter it into the public comment record for the BMASP Community Workshop #2, Wednesday, March 16, 2022.

Thank you!

Wind, Waves, and Lee Shore at the WETA Ferry Dock Location



This is a still picture from a video (attached, I suggest you watch it) of conditions in Berkeley's south sailing basin with a strong south wind blowing directly across the south-facing seawall. Note the reflected waves, and the spray overtopping the seawall. With a strong north wind, the proposed north-facing WETA dock would probably look something like the video, with waves breaking over the dock and soaking anyone on it.

North and South Winds

Strong North and South wind events happen several times a year on the Bay. The figure below shows the Sword configuration presented at Workshop #2. Wave protection looks good for the predominant west-to-southwest wind directions, but strong North to Northwest wind and waves would hit the WETA docks with full force, with waves overtopping the docks much like the waves in the video. Protecting the WETA docks against waves coming from the north is not at all easy because a breakwater cannot be placed within or directly upwind of the ferry turning basin. This is a serious problem for a dock in this location, which probably would mean cancelling ferry service on days with north winds above a certain threshold.

For a South wind, the 'Sword' hilt forms (as labeled in the figure) a Protected Berthing Position, but if there is no wave attenuation for the Lower Wave Condition berth, waves would probably overtop the float in full view of passengers waiting in line for the ferry in the Protected Berthing Position. Entertaining, perhaps, but not confidence-inspiring. Wave attenuation for south wind storms needs to be present for both the Lower Wave Condition berth and the Protected Berthing Position.

Nearby Lee Shore

In the usual westerly summer winds, an inbound ferry will come downwind to a position north of the ferry's berth, then make a 180° turn in the "Ferry Turning Basin" so it ends up pointed upwind when docked. But the summer winds are often well above 25 mph, and the waves can be substantial, a bit like those in the picture above. The 180° turn would at the very least give the ferry captains a good chance to demonstrate their skill.

There is a significant hazard here, however: the ferry turning basin is just a few boat lengths upwind of both the rocky shore and the Skates restaurant. If a ferry were to lose power or steering control just before the 180° turn, it would not take long for the ferry's eastward motion, helped by a strong summer wind, to carry it down to the shore. It might ground on the rocks, which would be dangerous, or collide with the Skates restaurant, which would be very dangerous indeed. Skates is built on tall, slender pilings (see below) and might not survive a collision with a 135-foot-long ferry, especially if the ferry were to drift under the restaurant. The chance of injury in such an accident would be significant.

Perhaps after a power loss there would be time and room to set an anchor, perhaps not—an anchor would have to be dropped almost immediately after loss of power to have a chance of stopping the ferry in time. For the crew to deal with such a situation, they must have appropriate equipment and rigorous training in how to use it, very much like the training aircraft pilots receive for engine failures during takeoffs.

With well-maintained ferries, this kind of power loss should be a very rare event. Given the potential hazard involved, though, I think this is a safety issue that needs to be carefully evaluated for this site.

WETA's new Treasure Island ferry dock also has a windy location and a close lee shore—and, for what it's worth, a breakwater to protect against north winds and waves. Perhaps WETA has investigated this problem. If so, they should share their work.

Wind and Wave Modeling

In 2018, the city commissioned a study by GHD, *Small Scale Ferry Terminal FS Berkeley Municipal Pier_DRAFT.pdf* , that should have helped with the design of the pier and the identification of the lee shore problem. Unfortunately, the study used wind data from NOAA's Alameda Station, a far less windy location than the Berkeley Marina, so the wave modeling was for 12 mph west wind and was therefore useless (see pages iii, 24, and 25). If the Berkeley Pier docking site is to be used, a wind and wave study should be completed using real-world data, probably obtainable from iWindsurf, which has several nearby wind sensors and archives of wind strength/direction data. This data should allow modeling wave action for all wind directions, and so guide the design of wave protection for the ferry docks. Modeling should include prediction of silting resulting from candidate breakwater designs.

Pier Structure Design

The design of the pier structure also needs consideration: the design chosen has monopile bents along the pier centerline, unlike the existing pier which has its pilings along the north and south pier edges.

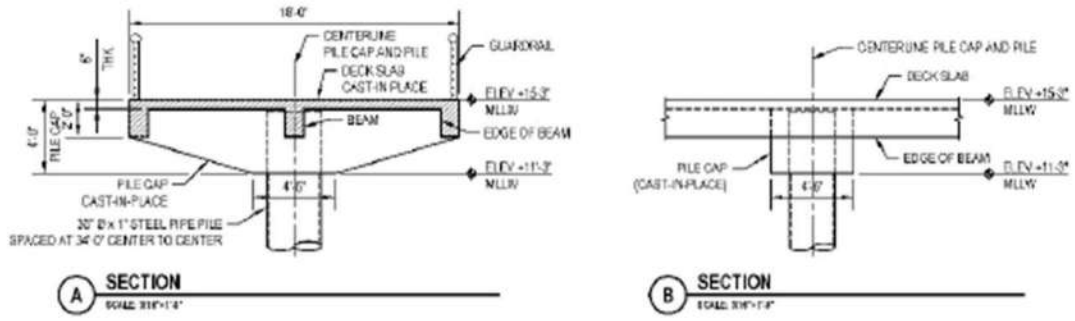


Figure 8 – Replacement Pier Concept using Monopile Bents

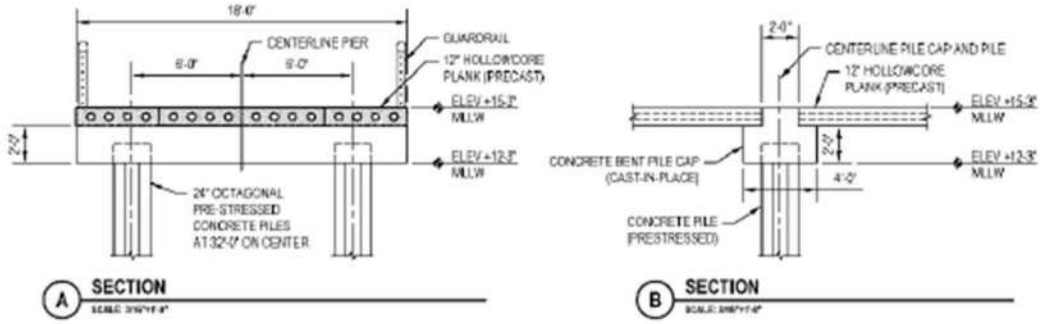

Figure 9 – Replacement Pier Concept using Two Concrete Pile Bents

This design choice has safety implications: the centerline structure makes it much more likely that a boat that gets blown against the pier will end up under the pier deck (see picture below of a boat blown under the San Mateo bridge in 2009). Widening the stance of the two concrete pile bents and keeping the along-pier pile spacing low would provide better protection against a boat ending up under the pier.

(Figures above from study by GHD, *Small Scale Ferry Terminal FS Berkeley Municipal Pier_DRAFT.pdf,* pages 11 and 12.*)*

Michael Macor / The Chronicle

Picture/story:
https://www.sfgate.com/bayarea/article/Crews-to-move-boat-stuck-at-San-Mateo-Bridge-3165070.php#photo-2297687

In addition to the safety implications, the location of the piles has implications for fishing from the pier, since the pilings and the biomass that attaches to them are part of the food chain of fish and crabs. The current pier construction allows fishing directly adjacent to the pier support pilings, which, if I remember from long ago, gets more bites. This should be looked into before finalizing the design. Keeping part of the underwater structure of the old pier should also be considered.

Dredge the North Marina Entrance

As a person who goes in and out of the marina under sail, I would choose to use the north harbor entrance at times when both ferries and fishing charter boats are likely to be using the south entrance. Therefore, I think that the ferry project should undertake the dredging of the north harbor entrance as well as the south one, so that boats leaving and entering the marina have the opportunity to avoid possible congestion near the ferry dock.

Subject: EIR Scoping item, safety at the proposed WETA Berkeley ferry dock

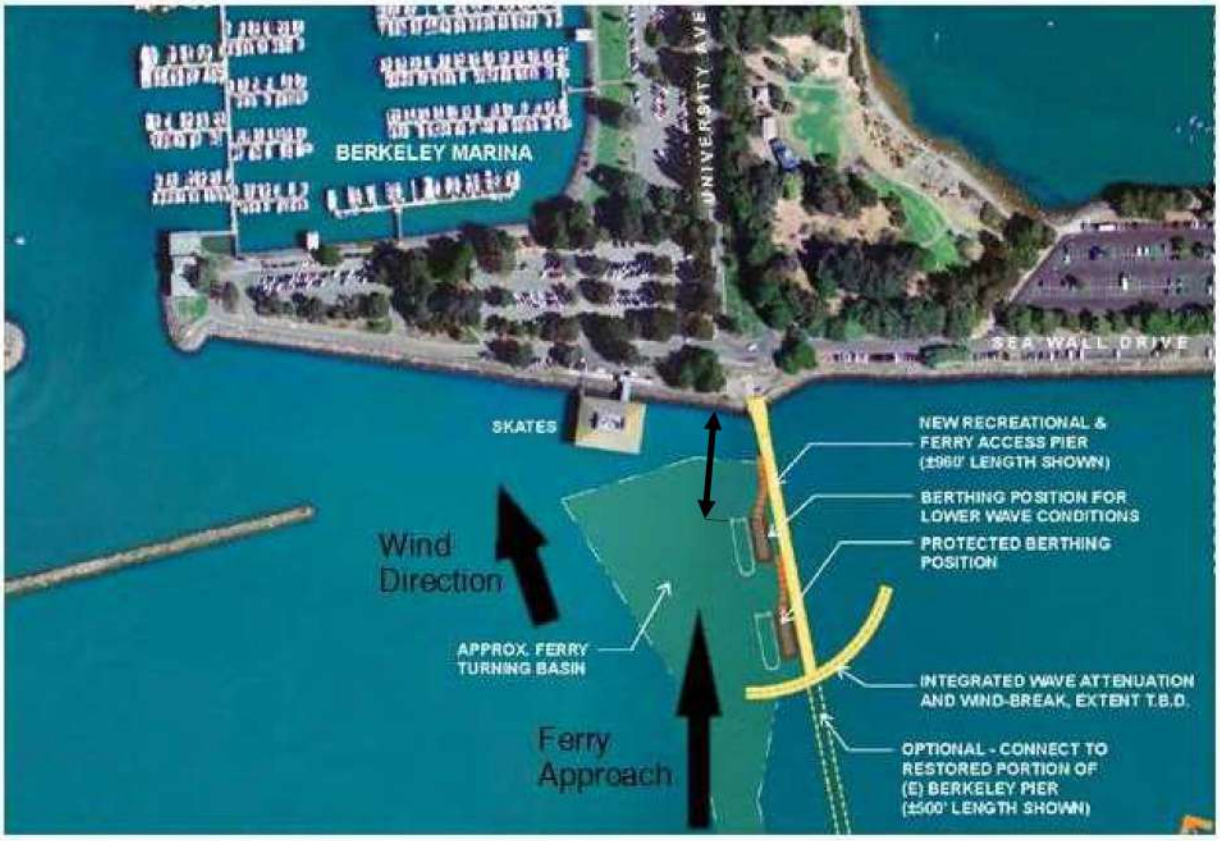
WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Please add the attached to the EIR scoping comments.

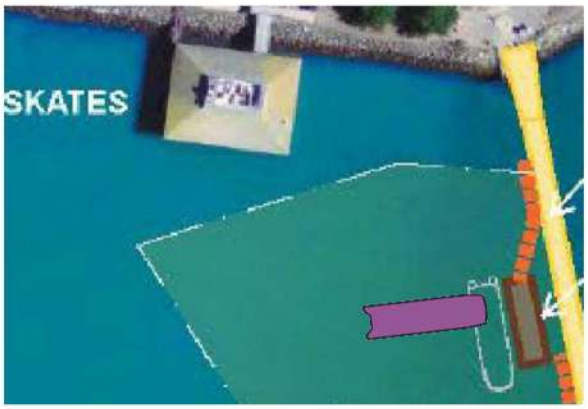
The attached documents describe a serious hazard for the proposed WETA ferry dock location, which I believe the EIR should carefully evaluate.

Thanks,

Gordon Stout



WETA's Berkeley Ferry Dock Location



On November 23, 2018 a Golden Gate Ferry rammed a dock at the San Francisco Ferry building, check out the bow damage in the picture above and this video. Fortunately, there were no serious injuries and damage was relatively minor, about $3 million. The cause of the accident appears to have been the captain's unfamiliarity with a recently upgraded control system

Consider the possibility of a similar loss of control accident happening at the dock location proposed for the Berkeley WETA ferry (see below). In the usual westerly summer winds ("Wind Direction" arrow in the figure), an inbound ferry will come in along the "Ferry Approach" arrow, then make a 180° turn in the "Ferry Turning Basin" so it ends up pointed upwind when it gets to the dock. But the summer afternoon winds are often well above 25 mph, and the waves are substantial. The 180° turn would at the very least give the ferry captains a good chance to demonstrate their skill.

FINAL_Ferry Terminal Facility Feasibility Study - Berkeley Municipal Pier See Page 34 (arrows added)

Zoomed-in image showing Dorado-sized (~300 passenger) ferry halfway through a 180° turn.

It is a very tight situation for a possible control loss. The inshore end of the ferry's dock is only 200 feet upwind of the rocky shore, and a 25-mph wind would soon push a disabled ferry downwind onto the rocks, which would be quite dangerous, or onto the Skates restaurant, which would be very dangerous indeed. Skates is built on tall, slender pilings (see next page) and might not survive wind and wave pushing a 135-foot-long ferry against and perhaps underneath it. Injuries and damage in such an accident would be very likely.

Information with some bearing on how likely a control loss event might be:

1. The meeting minutes of the Harbor Safety Committee of the San Francisco Bay Region for January and February 2025 described seven instances of loss of propulsion or steering in passenger vessels on the Bay. (see Harbor Safety Committee Reports of Loss of Propulsion Jan and Feb 2025.pdf, attached with this document).
2. Hyundai, Kia, and Genesis are recalling over 146,000 electric vehicles because a faulty part may cause them to lose power while driving. In addition to the main traction batteries, a typical EV needs another power source (e.g. a 12V battery) to run the controls. On an electric ferry, it is likely also a small battery, either backed up with a generator or not.
3. After the Baltimore bridge collapse caused by a power loss in a big container ship, USA Today summarized US Coast Guard data showing: At least 6,000 times in the past 22 years – an average of more than five times a week – crews on board massive cargo ships, oil tankers, container barges and even cruise vessels have reported what befell the Dali: a loss of power, loss of propulsion, loss of steering, or some combination of the three…

Docking Maneuvers:

- The ferry battery will be at a low state of charge when the ferry arrives at Berkeley, which may exacerbate some system failure modes.
- To the extent that the docking maneuvers involve dramatic steering or propulsion inputs, they may stress the control system and cause an incipient control failure to manifest as a hard failure during the docking.
- The 180° turn requires the skipper to shift attention from starboard to port, which can be tricky given that the ferry's beam is 34.5 feet.
- If the approach requires the ferry to drop backwards into position, the helmsman must look backwards to the dock, again, maybe tricky.
- If the loss of control occurs before the ferry slows for the 180° turn, the ferry's downwind speed will greatly reduce the available time to respond.
- A ferry going downwind at 20 knots would take just over a minute to travel 200 feet to the rocks. That does not leave much time to recognize and respond to a problem.

The best response to a loss of control event would probably be to drop an anchor. But an anchor would need to be dropped very quickly, given the short drift distance available.

- What kind of anchor should be used, and how much scope will the anchor need?
- Will the anchor be dropped off the stern or bow? There probably need to be two protocols, one for an anchor drop before the 180° turn and another for an anchor drop after the turn.

- Will the mud bottom be free of snags and debris that might keep the anchor from biting into the mud?
- Is there anything on the underside of the ferry that the anchor line could foul?
- Are there enough crew on the ferries to deploy the anchor quickly?
- When the anchor line comes tight, is there potential for injury to people near it?

The approach of the ferry to the dock and the dropping of the anchor would need carefully thought-out protocols, which ferry personnel would need to be well-trained to execute rapidly if a loss of control event occurs.

In my opinion, the WETA dock should be positioned in a less exposed site, for example inside the Marina or in a purpose-designed facility on the Golden Gate Fields shoreline.

This is a matter that should be carefully considered in the ferry project EIR.

Skates Restaurant

Would Skates survive being hit by a 135-foot, 169-ton ferry?

Draft Minutes
Harbor Safety Committee of the San Francisco Bay Region
February 13, 2025
https://www.sfmx.org/wp-content/uploads/2025-02_HSCMinutes_DRAFT.pdf
Total of 29 entries, the four below were LOP for passenger vessels

Loss of Propulsion (17DEC2024): A U.S. flag passenger vessel experienced a Loss of Propulsion on the port engine. Vessel moored safely at San Francisco Gate B and received permission for a one-time transit from San Francisco to Larkspur for repairs. Coast Guard issued the vessel an Operational Control, rectify Prior to Carriage of Passengers (Code 701). On 07JAN2025, vessel operator reported the root cause of the loss of propulsion as a failed fuel injector. On 21JAN2025, Coast Guard received a report that the vessel propulsion system operated as intended following satisfactory sea trials. Deficiency Cleared. Case pends.

Loss of Propulsion (23DEC2024): A U.S. flag passenger vessel experienced a reduction in propulsion on the starboard engine due to a low fuel oil pressure alarm. Vessel received permission from the Coast Guard for one time transit to Alameda facility to identify root cause, provide tech report, and conduct sea trials. Coast Guard issued an Operational Control, rectify Prior to Carriage of Passengers (Code 701). On 01JAN2025, Coast Guard received an email outlining the root cause of the reduction in propulsion to be from an issue with the ECU connecting to the starboard main engine. Vessel replaced the ECU and completed satisfactory sea trials. Operational Control Cleared. Case Pends.

Loss of Propulsion (27DEC2024): A U.S. flag passenger vessel experienced an engine stall while transiting in the San Francisco Bay. Vessel returned to Pier 3 in Alameda and determined the engine stall occurred due to a leaky fuel fitting. Vessel crew also found a loose connection at a fuel hardline which caused air intrusion into the fuel system. Coast Guard issued an operational control, rectify Prior to Carriage of Passengers (Code 701). Crew repaired the faulty connection and engine reached full RPM during satisfactory sea trials. Operational Control Cleared. Case Pends.

Operational Control (23DEC2024): A U.S. flag passenger vessel received an operational control, rectify Prior to Carriage of Passengers (Code 701). Vessel reported loss of throttle control to port and starboard propulsion drives while mooring at Pier 41. On 26DEC2024, operator submitted a tech report that no abnormalities were found, sea trials conducted satisfactorily, and all systems operational. Operational Control Cleared. On 27DEC2024, during transit, the vessel experienced loss of throttle control to the port and starboard propulsion drives. Vessel moored at Pier 41. Coast Guard issued an operational control, rectify Prior to Carriage of Passengers (Code 701). Vessel received authorization for one-time transit to Pier 9 for maintenance and repairs. On 10JAN2025, the vessel conducted sea trials. While underway the operator completed several propulsion tests, including full ahead followed by full astern. On 14JAN2025, technicians reported that the throttles were calibrated to disable themselves until RPMs reduced below 70 when going from ahead to astern. Vessel installed new throttle controls. Operational control Cleared. Case Closed.

Draft Minutes
Harbor Safety Committee of the San Francisco Bay Region
January 9, 2024
https://www.sfmx.org/wp-content/uploads/2025-01_HSCMinutes_DRAFT.pdf
Total of 19 entries, the three below were LOP for passenger vessels
Loss of Propulsion (10NOV2024): A U.S. flag passenger vessel experienced a loss of propulsion on their STBD engine due to loss of propeller while transiting to Richmond. The vessel returned to the pier and offloaded all passengers. Coast Guard issued the vessel an operational control (Code 60, Prior to Movement), with a one-time transit to Alameda for drydock. At drydock damage was found to have occurred to the strut, shaft, rudder, and cutless (sic) bearing. On 17NOV2024, Coast Guard attended vessel for sea trials, sea trials conducted satisfactorily. Operational Control Cleared. Case Closed.

Loss of Steering (22NOV2024): A U.S. flag passenger vessel experienced a loss of steering; vessel operator reported issues with the STBD steering system while underway, with alternate jet propulsion available. Vessel returned to the pier. Coast Guard issued an operational control (Code 701, Prior to Carraige of Passengers). On 24NOV2024, vessel operator submitted tech report attesting to satisfactory repairs. Vessel conducted satisfactory sea trial. Operational Control Cleared. Case Pends.

Operational Control (02NOV2024): A U.S. flag passenger vessel was issued an Operational Control (Code 70, Prior to Carraige of Passengers). While departing the pier, the vessel lost power from one of two generators, reducing propulsion to approximately 66% power. Vessel safely moored and was issued the operational control. On 03NOV2024, operator notified Coast Guard that the issue had been resolved. Identified a failure of two electrical relays that send the key switch signal to the control system. Both relays were replaced, and sea trials conducted. Coast Guard received satisfactory tech report. Operational Control Cleared. Case Closed.

Subject: Parking-TDM Response to Parking and TDM Plan Revised Draft Addendum May 19, 2025 G. Stout.docx

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Liza,

Not super happy with this, but it includes some things that may have not been covered elsewhere, so please put it into the EIR Scoping/future debates bin.

Thanks!

Gordon

Parking-TDM Response for PRWC meeting May 14, 2025 G. Stout

The parking studies that have been reported do not provide a comprehensive and accurate picture of recreational parking at the marina. Without such a picture, neither good parking plans nor a credible EIR is possible.

Much of the parking data was compromised by the fact that years' worth of the parking records were collected at 10 am and 8 pm, and hence did not accurately reflect recreational use.

Waterfront Monitors Parking Counts *Page 22/129: "The City of Berkeley Waterfront Monitors have been consistently collecting daily parking counts at the Waterfront since May 2021. The data is collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with the results recorded on a paper survey form that is later entered into a spreadsheet maintained by Waterfront staff."*

"Limitations: *The data may not reflect peak utilization which could occur outside of the hours of 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points"*

Kittelson's 10 am-8pm data ***Limitations*** caveat highlights a problem that still shows up in the report. For example, Figure 5: Parking Utilization on Weekends (Average Saturday vs Peak Saturday), presumably this figure summarizes 10 am/8 pm data, but what time is midday, 2 or 4, or something else? And does the peak Saturday "overall public parking 75% occupied with 306 spaces remaining" refer to empty spaces in slip holder lots? This is waterfront staff data, was in collected at 10 am? And what is the "Seawall Drive/Shorebird Lot"?

It is probably true that Kittleson was set up to fail by a decision to keep the 10 am/8 pm data, but fail they did, it's confusing to read.

On the plus side, Kittelson did present the Quality Counts data, collected on

- Saturday, April 6, 2024
- Thursday, April 11, 2024
- Thursday, August 1, 2024
- Thursday, August 22, 2024
- Saturday, August 24, 2024

Five days of data for a multi-million-dollar project seems woefully inadequate, however. I presented to the PRWC a study of sixteen Google Earth images of the Skates parking lot, because the Waterfront Specific Plan wanted to place a hotel there. Of the 16 images, a third showed a significant number of cars, a third showed few cars, and a third fell in between.

Parking at the marina is variable, data sampling must be frequent enough to provide an accurate picture.

But even if it is not enough data for designing a parking plan, maybe we can learn something from these five days of Quality Counts data. Tables 1 and 2 show that on weekends the South Cove East and West lots are both extremely full, way fuller than the earlier waterfront monitor data showed. And way too full--adding even a few spillover ferry rider's cars would make South Cove parking untenable.

Let's talk about all those Kittelson plots that show the 1541 available space line way, way above the lines showing spaces actually used. Creepy, not just because the 1541 includes the 300-space Seawall Drive parking lot that the city usually keeps closed. Mostly creepy because it sounds like a scam—too-good-to-be-true.

I see the latest draft shows 300 spaces removed from the available space line to reflect the exclusion of the Seawall Drive parking lot. That's progress, but it's not nearly enough. Keep going, exclude all the lots that are just too far away from the South Cove to be useful. Spinnaker Way, Spinnaker Way Lot, D & E lots are all useless to recreational users of the South Cove. Aso, all of the slip holders parking lots (J&K, L, what's left of M, O and F&G, and H&I) are shown as "Available Spaces" (fig 6), even though filling them up with ferry parking would lead to an exodus of slip holders (who need and pay for that parking) and a major financial crisis for the Marina.

The Kittelson study describes a marina where patrons may need to park far from their desired destination, and then use wayfinding, shuttles, micromobility or walking to get where they actually want to go. This profoundly degrades the experience of spending time at the marina. Let's say I want to take my grandsons to Adventure Playground for an hour. I drive down there and park on Marina Boulevard. A shuttle is useless, as would be taking a bus to the marina—the kids have to be in their car seats, and they usually have drinks, snacks and a lot of other stuff. How long does it take to get parked and walk/micro-mobility/uber/whatever down to Adventure Playground? And what happens when you forgot your grandson's warm jacket in the car, do you have to go all the way back to grab it?

The day now centers around parking logistics rather than making stuff and zip-lining at Adventure Playground. How can you say that the Ferry project has not usurped the parking—and the happiness—of these recreational users?

The 315-space Seawall Drive lot was closed in 2018 to deal with a homeless RV encampment, and the city has kept it mostly closed ever since. At this point, that's **seven years and counting** of parking in the marina being compromised. This has been a horrendous breach of the city's responsibility to maintain public access, and has significantly exacerbated parking problems in the

South Cove as well as undermined the city's credibility with the Marina recreational communities. Perhaps the City thinks that closing the Seawall lot will make everyone forget that the lot provided important recreational parking. We did not forget:

The Berkeley Water Transportation Pier Ferry Project must plan for the following categories of parking access that historically were provided by the Seawall Drive lot:

1. Some of this lot—I would guess 50 spaces—used to provide parking for families wanting to carry in supplies to picnic or barbecue at Shorebird Park. I don't have data, but I believe that such picnics essentially stopped in Shorebird Park when the Seawall Drive lot was closed.
2. More spaces—again I would guess about 50 spaces—were used by people fishing off the pier before it was closed in 2015. There needs to be parking in the plan for these people, many of whom need to bring tackle and take fish back home, not ideal for bike or bus travel.
3. Going back in time, perhaps 100 spaces were used by Hs Lordships restaurant, and some spaces will be needed for a new restaurant if it is to be successful. Food trucks also need nearby parking.
4. Another block of spaces (10 or 20?) was used by people launching from Lordships Cove. If there is a good launch put in at the Cove, it will need, say, 50 spaces, more if the South Basin is not dredged.
5. It was a very important overflow lot for the other South Cove parking lots, way closer than Marina Boulevard and about as close as Skates.

This totals 250 spaces, maybe only 150 spaces if they stagger time-wise, are we thinking we could squeeze 150 more cars in the South Cove and Skates lots? I don't think so, not even close.

Income and Paid Parking Paid parking is of course a key strategy to try to make the Ferry project parking work. But Kittelson's Intercept Study found that 16% of responses reported household incomes of less than $50,000 and 10% less than $25,000. Also, 30% of the respondents come to the marina "a few times a week". Let's say it's 3 times a week, 30 weeks a year, and a $10 parking charge, that's 3 x 30 x $10 = $900 per year. On a $25,000 income, that's crazy! We should not allow the ferry project to force paid parking onto the Marina!

License Plate Readers, Parking Permits, and Pay Kiosks Expensive infrastructure, useful if the Marina is to be turned into a big-league ferry terminal. Not so useful otherwise.

Delayed Lot Opening Won't Keep Ferry Cars Out Morning Parking lot closures are only effective against ferry parking only if the closure covers all of the ferry departure times. But WETA projects departure times throughout the day:

WETA Berkeley Ferry Service Business Plan, Version 1.0, page 22:

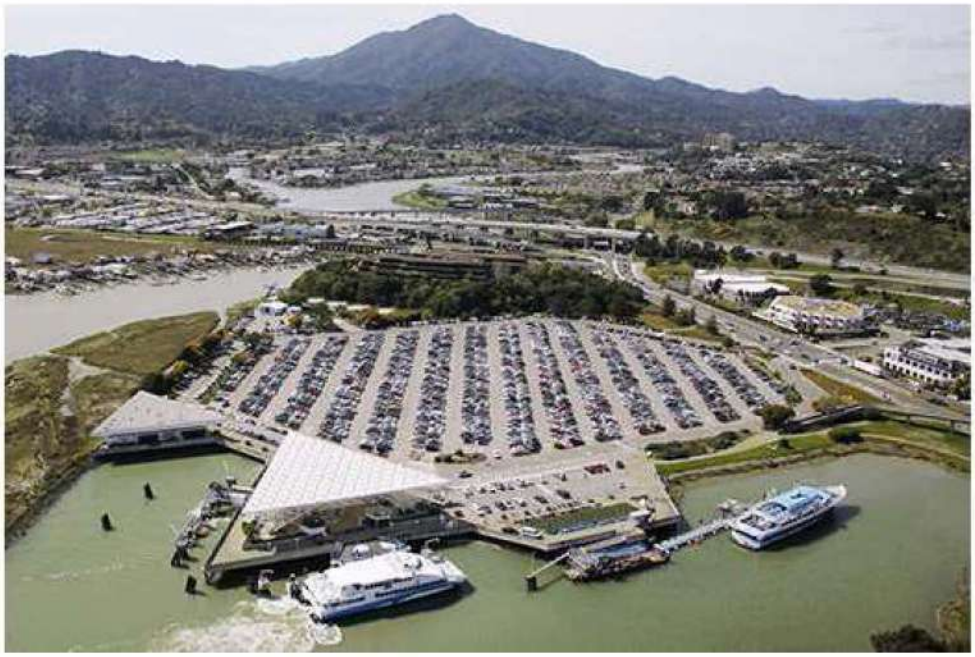
Source: Economic & Planning Systems

So, for example, in Skates / N, J&K, South Cove West, L&M and O, Scenario 2, **Free Full Day parking after 10 am**, the lots will fill up at 10 am with all-day ferry parkers planning to take the10:40 or later ferry. **This scheme does not keep ferry parkers out of the recreational lots.**

- **Were attempts made to persuade Genentech to get their ferry riders not to park in the South Cove parking lots?**
- **Dynamic Management: if this is actually a strategy, who within the city will advocate for keeping recreational parking available? And if it is the strategy, how many years after spending all the money will you know the system works? Don't you want to know before you build it?**

Negotiate with WETA Why, oh why does Berkeley accept as a constraint whatever ridership goal WETA proposes? Berkeley is the entity with the obligation to BCDC to not allow ferries to encroach upon recreational use. Why are we not telling WETA that they may not sell so many ferry tickets that ferry parking will overwhelm the marina? Isn't that the way around it ought to be? If we told WETA they could have 300 passengers per day, the marina might remain a great park.

Recreational Users are in a Losing Position In general they arrive late, when most of the parking lots have already been scouted by the ferry and charter boat riders. And many recreational patrons do not have the income for normal paid parking or the occasional expensive "oops—missed the time limit" tickets. Bad deal for them, we should not let it happen.



Parking in the South Cove West Parking Lot This document shows in photographs that on four winter mornings, the three main rows of the South Cove West Parking Lot were mostly full by 9:00 a.m. with cars from Genentech ferry riders and fishing boat anglers. (Perhaps you can find this report in the BMASP public response files). I sent an email to Scott Ferris and Ali Endress (see forwarded copy, perhaps also in the same place) asking that the 199 Seawall lot be opened and Genentech be enlisted to persuade their ferry riders to park there. No response to either email. I am afraid this may be an example of how effective **Dynamic Management** will be i.e., **not very**. The Genentech ferry customers still park in the South Cove West lot, which still overfills on sunny afternoons, and the 199 Seawall lot is still more often closed than not. Did the City contact Genentech? I don't know, did they?

Berkeley Police Department Lot grabbed most of L-M dock, **the lot should be given back to the marina**, we can't afford to lose this much centrally located parking for something that would be better in Berkeley proper.

How ugly do we want the Marina to become? Larkspur (below) is an example of a ferry terminal with what looks like adequate parking. Despite those cool triangular roofs, it is butt ugly. I have never felt moved to go there to relax or connect with nature or boats.

I will not love the version of the Berkeley Marina envisioned in this report. I think we should not build it. The Marina is a beautiful, beloved park, please let's keep it that way.

Parking-TDM Response for EIR April 05, 2025 G. Stout

Executive Summary

- **The parking studies that have been reported do not provide a clear picture of recreational parking at the marina. Without a clear picture, good parking plans and a credible EIR are not possible. This needs to be fixed, and soon, if 2025 is going to provide usable data.**
- **From the data and experience that we do have, it does seem clear that existing recreational parking is often maxed out without the ferry.**
- **The marina is currently used by low-income patrons for whom paid parking would be problematic. Can parking management without paid parking be made to work? Paid parking has a negative impact.**
- **The Kittelson study describes a marina where patrons may need to park far from their desired destination, and then use wayfinding, shuttles, micromobility or walking to get where they actually want to go. This profoundly degrades the experience of spending time at the marina, and should be counted as a negative impact with no obvious mitigation in the EIR.**
- **If every parking lot is completely full of parked cars, the marina will be uglier than it is now.**
- **What can families with small children do when the only available parking is in parking lots distant from where they want to take their families?**
- **Were attempts made to persuade Genentech to get their ferry riders not to park in the South Cove parking lots?**
- **Dynamic Management: if this is actually a strategy, who within the city will advocate for keeping recreational parking available?**

Waterfront Monitors Parking Counts Referring to the Kittleson study attached to the PRW meeting agenda, what is the availability of recreational parking in and around the South Cove? Dunno, darn it—the Kittelson study **still** does not have believable answers to this crucial question. Page 22/129: "The City of Berkeley Waterfront Monitors have been consistently collecting daily parking counts at the Waterfront since May 2021. The data is collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with the results recorded on a paper survey form that is later entered into a spreadsheet maintained by Waterfront staff."

"Limitations: The data may not reflect peak utilization which could occur outside of the hours of 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points"

Kittelson's 10 am-8pm data ***Limitations*** caveat casts doubt on most of the report. In the November 18, 2024 Council Worksession, the WSP was paused to conduct a parking study to determine existing

conditions for parking. Unfortunately, the Kittelson study still relies on the 10 am- 8pm data (Figure 10). The WSP needs to remain paused until a credible parking study is conducted.

I am placing my exploration of the data question in **Appendix A** at the end of this document, because there are other issues I also want to cover:

Negotiate with WETA Why, oh why does Berkeley accept as a constraint whatever ridership goal WETA proposes? Berkeley is the entity with the obligation to BCDC to not allow ferries to encroach upon recreational use. Why are we not telling WETA that they must stop selling ferry tickets when parking overwhelms the marina? Isn't that the way around it ought to be? If we told WETA they could have 300 passengers per day, the marina might remain a great park.

The Intercept Survey has this:

- 16% (63 people) reported having cancelled their visit to the waterfront because they could not find a parking space. That is a disaster, especially if you have a car full of kids!

This is clear evidence that there is in fact not sufficient parking available.

- 16% of responses reported household incomes of less than $50,000
- 10%, less than $25,000

Unless we want the marina to be a park just for Berkeley's well-heeled, we should **not** implement paid parking here. The ferry riders will have those well-paying jobs that the Pier-Ferry project touted in selling itself to the City Council, so they should have much higher incomes than many of the recreational marina patrons. Ferry riders will be able to afford "penalty" tickets, recreational patrons may not.

Recreational Users are in a Losing Position They arrive late, when most of the parking lots have already been scouted by the ferry and charter boat riders. And many recreational patrons don't have the income for normal paid parking or the occasional expensive "oops—missed the time limit" tickets. Bad deal for them, we shouldn't let it happen.

Families can't readily move from one parking lot to another Say your minivan full of kids can't find a parking space in the West Cove lot to go to Adventure Playground. Are you going to park up on Marina Boulevard and somehow walk, shuttle, bike, or Uber your kids back to Adventure Playground?

Parking in the South Cove West Parking Lot This document shows in photographs that on four winter mornings, the three main rows of the South Cove West Parking Lot were mostly full by 9:00 a.m. with cars from Genentech ferry riders and fishing boat anglers. In response, I sent an email to Scott Ferris and Ali Endress (see forwarded copy) asking that the 199 Seawall lot be opened and Genentech be enlisted to persuade the ferry riders to park there. I am afraid this may be is an example of how effective Dynamic Management will be i.e., **not very**. The Genentech ferry customers still park in the South Cove West lot, which still overfills on sunny afternoons, and the 199 Seawall lot is still more often closed than not.

Parking Variability at the Marina (document, see separate email) A series of 16 Google Earth images shows dramatically different parking utilization on different days for a parking lot that BMASP has considered for a hotel site. An overflow lot is great for flexibility, but only If it doesn't have a hotel plunked down on it.

Berkeley Police Department Lot grabbed most of L-M dock, **the lot should be given back to the marina**, we can't afford to lose this much centrally located parking for something that would be better in Berkeley proper.

Parking Lot Closures Morning Parking lot closures are a useful strategy against ferry parking only if the closure covers the ferry departure time. But WETA projects departure times throughout the day:

WETA Berkeley Ferry Service Business Plan, Version 1.0, page 22:

Table 8 Berkeley to San Francisco Service (Illustrative Only)

	Depart Berkeley	Arrive San Francisco	Depart San Francisco	Arrive Berkeley
Weekdays AM	6:30	6:55	7:05	7:30
	7:05	7:30	7:40	8:05

	17:00	17:25	17:35	18:00

Source: Economic & Planning Systems

All day, every day! Parking lot closures will not be a useful strategy against this kind of schedule.

How ugly do we want the Marina to become? Larkspur (below) is an example of a ferry terminal with adequate parking. Despite those kinda cool triangular roofs, it is butt ugly. I have never felt moved to go there to relax or connect with nature or boats.

I will not love the version of the Berkeley Marina that is envisioned in this report. I think we should not build it. The Marina is a beautiful, beloved park, please let's keep it that way.

On page 22/129 Table 2 is placed right after the Waterfront Monitors data gathering description, which is almost exclusively gathered at 10:00am 8:00 pm. Kittelson notes:

"Limitations: The data may not reflect peak utilization which could occur at times other than 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points."

But 10 am data misses most recreational parking, so most of the charts of parking utilization are misleading. Trying to figure which of the data is 10 am only is not easy, see below.

Table 2 data is clearly from the Waterfront Monitors and is 10:00am 8:00 pm data.

3.2. Existing Parking Utilization

The City of Berkeley Waterfront Monitors have been consistently collecting daily parking counts at the Waterfront since May 2021. The data is collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with the results recorded on a paper survey form that is later entered into a spreadsheet maintained by Waterfront staff. The data collection methods have been refined over time to better support parking management objectives. Kittelson reviewed data from May 2021 to February 2024. During data processing, some lots had to be merged for various reasons, such as a lack of physical boundaries between them or combined data reporting for adjacent lots.

Limitations: The data may not reflect peak utilization which could occur at times other than 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points.

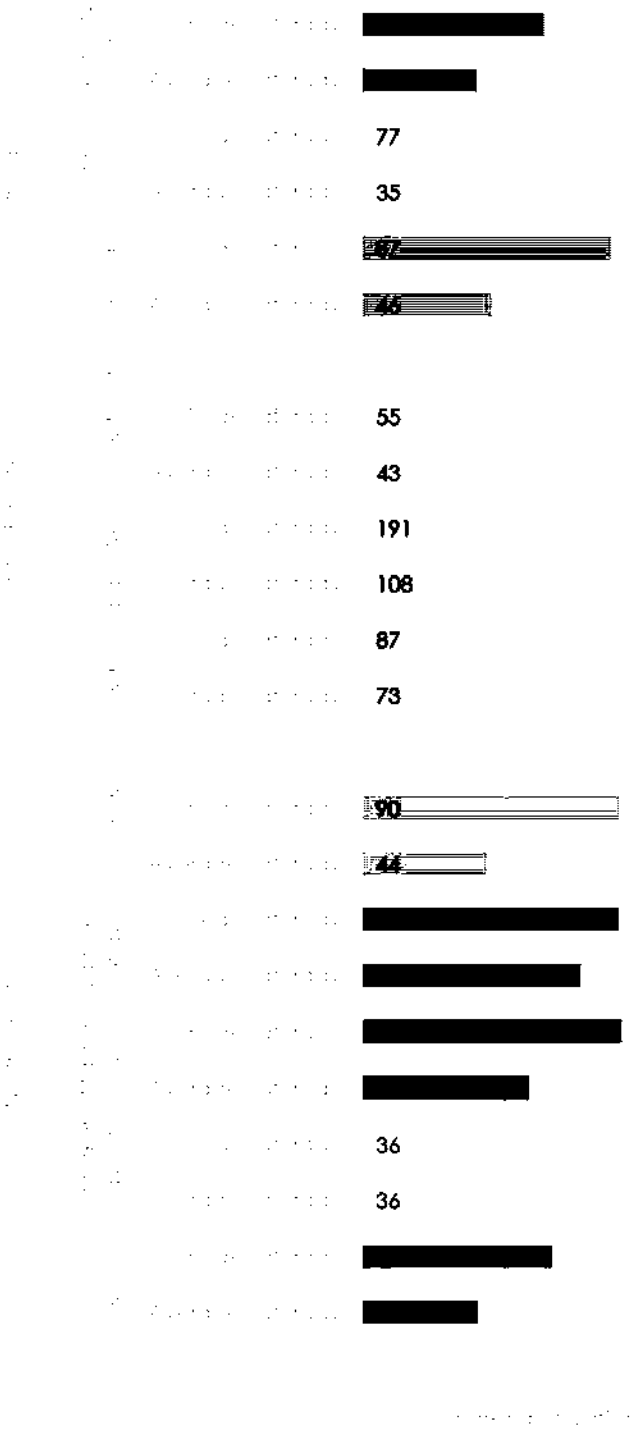
Table 2 measures parking utilization by lot for average and peak weekdays and Saturdays. Across all lots, parking utilization averaged around 31% on weekdays and 49% on Saturdays. Peak weekday parking was 50% utilized, while peak Saturday parking was 79%. This Waterfront-wide peak period occupancy estimate is a conservative aggregation of each lot's individual peak utilization. It is therefore likely that, even during peak periods, the Waterfront has more than 300 available spaces, spread across various lots.

Table 2. June Parking Utilization at the Berkeley Marina, 2021-2023

D&E lot	129	31	24%	42	33%	41	32%	67	52%
Spinnaker Way Lot	36	14	39%	29	81%	36	100%	71	197%
Marina Blvd	150	41	27%	59	39%	59	39%	91	61%
Spinnaker Way	127	45	35%	67	53%	77	61%	90	71%
F, G, H, & I Lot	115	39	34%	57	50%	44	38%	90	78%
J&K lot	92	49	53%	77	84%	73	79%	87	95%
South Cove East /West Lot	182	62	34%	110	60%	108	59%	191	105%
L&M[3] Lot	91	40	44%	64	70%	43	47%	55	60%
O Lot	72	28	39%	41	57%	46	64%	87	121%
Seawall Drive	90	24	27%	38	42%	35	39%	77	86%
Skates/N Lot	137	10	7%	31	23%	41	30%	64	47%
Totals	1,221	383	31%	615	50%	603	49%	970	79%

Source: Kittelson & Associates, Inc. 2024.
Note: The peak Saturday utilization for Spinnaker Way Lot exceeded the capacity due to data collection error in which some of the Launch Ramp Paid parking was counted at the adjacent Spinnaker Way Lot.

Figure 3 presents the same data, (**Average and Peak Utilization by Lot**)



3.3. Time of Day Utilization describes the Quality Counts, Figure 4 is Quality Counts Data, but it is averaged across many parking lots and is therefore not very useful

Moving down to **Section 6.0 Review of Parking Counts**, Figures 6, and 7 are identified *"Source: Parking Counts by Waterfront Staff, Data Compiled by Kittelson & Associates, Inc. 2024"*

Figure 8 and 9 are presumably from the same 10 am data, and Figure 10 also has a subhead *Source: Parking Counts by Waterfront Staff, Data Compiled by Kittelson & Associates, Inc. 2024.* Figures 8 and 9 show the Figure 10 data, so also are Waterfront Staff numbers, i.e., 10 am data.

The map figures (eg 8 & 9) don't have figure names/identifiers, and like many of the figures and tables don't identify which data set they are drawn from. Very frustrating.

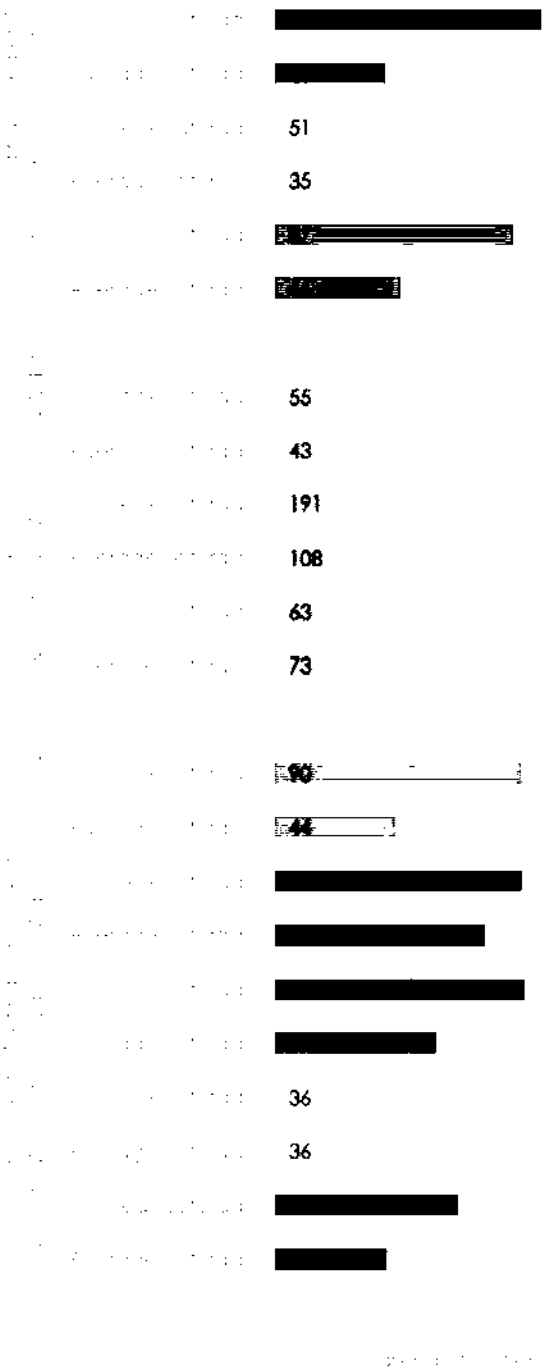


Figure 10: Parking Utilization on Weekends (Average Saturday vs Peak Saturday)

Source: Parking Counts by Waterfront Staff, Data Compiled by Kittelson & Associates, Inc. 2024
Note: Data does not include Seawall Drive/ Shorebird Lot.

Kittelson & Associates, Inc.

Here is a puzzle. Below is a figure presented at the Council Worksession November 18, 2024. Not identical to Figure 10 above, what's that about? Which one is accurate and which one is not?

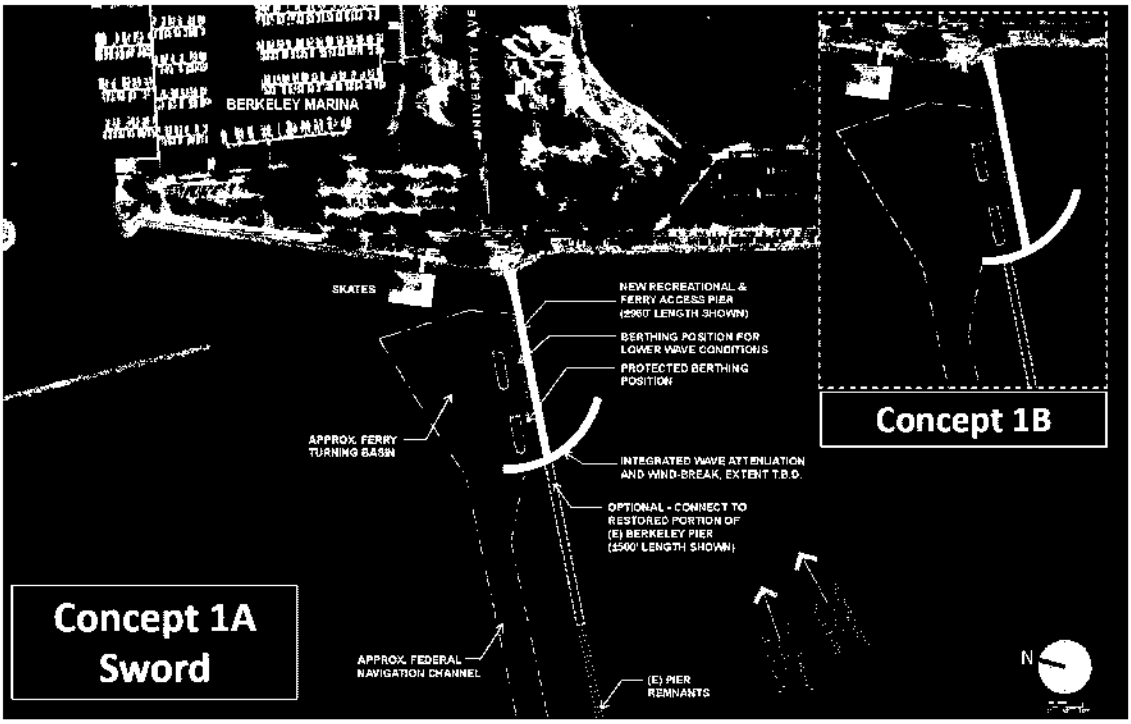
Subject: Fwd: Wind, Waves, and Lee Shore at the WETA Ferry Dock

Liza,
This is a somewhat different set of considerations for the WETA ferry dock location, please also include it with the EIR scoping inputs.
Thanks!
Gordon

Wind, Waves, and Lee Shore at the WETA Ferry Dock Location



This is a still picture from a video (attached, I suggest you watch it) of conditions in Berkeley's south sailing basin with a strong south wind blowing directly across the south-facing seawall. Note the reflected waves, and the spray overtopping the seawall. With a strong north wind, the proposed north-facing WETA dock would probably look something like the video, with waves breaking over the dock and soaking anyone on it.

North and South Winds

Strong North and South wind events happen several times a year on the Bay. The figure below shows the Sword configuration presented at Workshop #2. Wave protection looks good for the predominant west-to-southwest wind directions, but strong North to Northwest wind and waves would hit the WETA docks with full force, with waves overtopping the docks much like the waves in the video. Protecting the WETA docks against waves coming from the north is not at all easy because a breakwater cannot be placed within or directly upwind of the ferry turning basin. This is a serious problem for a dock in this location, which probably would mean cancelling ferry service on days with north winds above a certain threshold.

For a South wind, the 'Sword' hilt forms (as labeled in the figure) a Protected Berthing Position, but if there is no wave attenuation for the Lower Wave Condition berth, waves would probably overtop the float in full view of passengers waiting in line for the ferry in the Protected Berthing Position. Entertaining, perhaps, but not confidence-inspiring. Wave attenuation for south wind storms needs to be present for both the Lower Wave Condition berth and the Protected Berthing Position.

Nearby Lee Shore

In the usual westerly summer winds, an inbound ferry will come downwind to a position north of the ferry's berth, then make a 180° turn in the "Ferry Turning Basin" so it ends up pointed upwind when docked. But the summer winds are often well above 25 mph, and the waves can be substantial, a bit like those in the picture above. The 180° turn would at the very least give the ferry captains a good chance to demonstrate their skill.

There is a significant hazard here, however: the ferry turning basin is just a few boat lengths upwind of both the rocky shore and the Skates restaurant. If a ferry were to lose power or steering control just before the 180° turn, it would not take long for the ferry's eastward motion, helped by a strong summer wind, to carry it down to the shore. It might ground on the rocks, which would be dangerous, or collide with the Skates restaurant, which would be very dangerous indeed. Skates is built on tall, slender pilings (see below) and might not survive a collision with a 135-foot-long ferry, especially if the ferry were to drift under the restaurant. The chance of injury in such an accident would be significant.

Perhaps after a power loss there would be time and room to set an anchor, perhaps not—an anchor would have to be dropped almost immediately after loss of power to have a chance of stopping the ferry in time. For the crew to deal with such a situation, they must have appropriate equipment and rigorous training in how to use it, very much like the training aircraft pilots receive for engine failures during takeoffs.

With well-maintained ferries, this kind of power loss should be a very rare event. Given the potential hazard involved, though, I think this is a safety issue that needs to be carefully evaluated for this site.

WETA's new Treasure Island ferry dock also has a windy location and a close lee shore—and, for what it's worth, a breakwater to protect against north winds and waves. Perhaps WETA has investigated this problem. If so, they should share their work.

Wind and Wave Modeling

In 2018, the city commissioned a study by GHD, *Small Scale Ferry Terminal FS Berkeley Municipal Pier_DRAFT.pdf* , that should have helped with the design of the pier and the identification of the lee shore problem. Unfortunately, the study used wind data from NOAA's Alameda Station, a far less windy location than the Berkeley Marina, so the wave modeling was for 12 mph west wind and was therefore useless (see pages iii, 24, and 25). If the Berkeley Pier docking site is to be used, a wind and wave study should be completed using real-world data, probably obtainable from iWindsurf, which has several nearby wind sensors and archives of wind strength/direction data. This data should allow modeling wave action for all wind directions, and so guide the design of wave protection for the ferry docks. Modeling should include prediction of silting resulting from candidate breakwater designs.

Pier Structure Design

The design of the pier structure also needs consideration: the design chosen has monopile bents along the pier centerline, unlike the existing pier which has its pilings along the north and south pier edges.

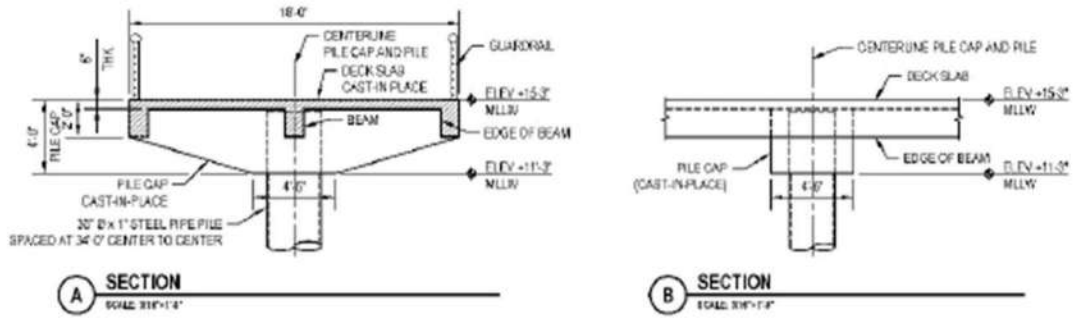


Figure 8 – Replacement Pier Concept using Monopile Bents

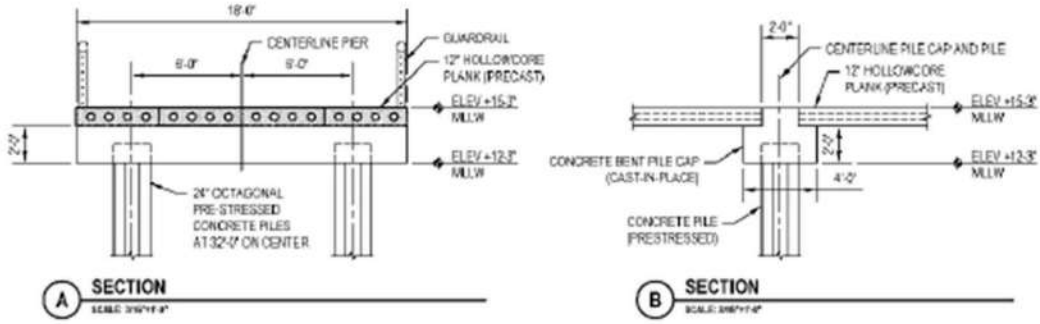

Figure 9 – Replacement Pier Concept using Two Concrete Pile Bents

This design choice has safety implications: the centerline structure makes it much more likely that a boat that gets blown against the pier will end up under the pier deck (see picture below of a boat blown under the San Mateo bridge in 2009). Widening the stance of the two concrete pile bents and keeping the along-pier pile spacing low would provide better protection against a boat ending up under the pier.

(Figures above from study by GHD, *Small Scale Ferry Terminal FS Berkeley Municipal Pier_DRAFT.pdf,* pages 11 and 12.*)*

Michael Macor / The Chronicle

Picture/story:
https://www.sfgate.com/bayarea/article/Crews-to-move-boat-stuck-at-San-Mateo-Bridge-3165070.php#photo-2297687

In addition to the safety implications, the location of the piles has implications for fishing from the pier, since the pilings and the biomass that attaches to them are part of the food chain of fish and crabs. The current pier construction allows fishing directly adjacent to the pier support pilings, which, if I remember from long ago, gets more bites. This should be looked into before finalizing the design. Keeping part of the underwater structure of the old pier should also be considered.

Dredge the North Marina Entrance

As a person who goes in and out of the marina under sail, I would choose to use the north harbor entrance at times when both ferries and fishing charter boats are likely to be using the south entrance. Therefore, I think that the ferry project should undertake the dredging of the north harbor entrance as well as the south one, so that boats leaving and entering the marina have the opportunity to avoid possible congestion near the ferry dock.

I am writing regarding the development of the Berkeley Marina. As an avid swimmer, I swim weekly there, with dozens of others, including the Selkies. Please protect this essential public recreation activity as you plan the marina! It is a free activity that anyone can partake in, and the marina is a well loved swim spot. By investing in the infrastructure in the area to make swimming easier and more pleasant (locker rooms, hot showers, easy and safe acces points) you will bring more swimmers to the area, encourage exercise and recreation, and make Berkeley a more appealing place to live and invest in.

Subject: Negative Impact of Ferry Project on Recreational Use

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Linda

The Ferry Project as proposed will have a serious negative impact on long established recreational uses.

As someone who has enjoyed swimming at the Berkeley Marina for several years, I want to highlight the importance of the cove by the former HS Lordships site and its adjacent parking. Oyster Cove is the only deep water access for swimming in Berkeley and much of the East Bay. When the tide is low in the South Basin, the water at the kayak dock is too shallow for swimming. Consequently this is the only access for swimming during much of the tidal cycle. When the wind is blowing, the cove is used extensively by wingfoilers who need deep water for their hydrofoils. These recreational uses have occurred for many years and this unique deep water access must be preserved. These swimmers and windfoilers have also improved and maintained this cove, in contrast to the general neglect of this area by the city.

In order to protect these uses, designated recreational parking must be available adjacent to the site. Wet, chilled swimmers need quick access to their vehicles for changing. Wingfoilers need adjacent parking in order to limit the carrying distance with heavy gear. By contrast, ferry commuters have few belongings and anticipate a walk in SF to reach their destination. Hence a stroll in the parking lot to the ferry pier is not out of the ordinary. Also, public transportation is impractical for swimmers and windfoilers, but it is reasonable for commuters. Ferry parking is a static use of a vehicle space for 8 or more hours by commuters who are spending their time and money elsewhere. Active recreational use in Berkeley deserves equal consideration with those who are leaving town for the day.

The appropriate solution to these competing needs for parking is to create a designated zone for recreational users, utilizing the spaces closest to the cove.

Hi,

Swimmer Jack Morel made two excellent presentations highlighting swimmers concerns.
Much was said by many concerning parking concerns. Please take into account our swimming community and access to these public lands and waters. This is crucial to our physical and mental health.

Thanks for your time,

Jessica Ma

Subject: Parking at Berkeley marina, Kittelson Report dated March 7. 2025

Dear Mr. Ferris:

INTRODUCTION AND SUMMARY

In January of 1967, Berkeley received a permit to fill an area of the bay and expand Berkeley marina to "...**permanently establish public access and recreational use for a sizable part of the Berkeley shoreline.** " (From the minutes for BCDC approval on January 20, 1967, Permit No. 28-66) The Bay Conservation and Development Commission, guardians of the Bay from relentless fill proposals, relied on the assurances of the city that the parking lot: **"would be used primarily for patrons of the restaurant, park and beach"**

But Berkeley has failed to maintain the facilities that justified the bay fill and now proposes a massive ferry terminal that could sacrifice the promised recreational benefits to a facility that will cost the city at least $29 million and will generate no revenue. That terminal, if approved, will generate no revenue to help maintain the marina, and the $94 million in deferred maintenance will remain deferred. Berkeley has not been forthcoming about the other costs that such a terminal might entail.

The Kittelson report is part of an effort to whitewash the potential impacts of a massive ferry terminal on the promised recreational use. It is inadequate, using misleading statistical methods to minimize what little data it has. It substitutes irrelevant data while excluding relevant data, and falsely claims that it is a comprehensive analysis of parking.

In an effort to retain some aspects of their professional reputation, Kittelson tips us off to the problem:

> **The data may not reflect peak utilization which could occur at times other than 10 am and 8 pm.** In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points.

Of course 10 am and 8 pm are not characteristic of peak recreational times. But the city has used this irrelevant data, while not including staff counts that showed the recreational parking lots 96% full on some weekdays and spent only a paltry $22,000 on actually counting parking. The document is fatally flawed, and the city needs to start over again and develop a factual baseline of recreational use and parking behavior—as stakeholders have said for years. I'll provide the details and supporting citations below.

BAY PLAN TESTS

Berkeley was granted State Tidelands and given permits, loans and grants to create **a regional recreational facility**. Those grants and permits establish policies, such as those found in the BCDC Bay Plan, and in the Water Trail legislation, that gave Berkeley funding, and permits to fill the Bay, *in exchange* for assurances that Berkeley would provide a regional facility, not one merely for Berkeley residents. That policy guidance has generally been ignored by Berkeley as it tried to push through a commuter terminal that poses an existential threat to the regional recreational facility that currently exists.

Berkeley Marina is designated as a waterfront park priority use area in BCDC's Bay Plan. Further guidance for protection of recreational use is established in Recreational Policy 9:

> Ferry terminals may be allowed in waterfront park priority use areas and marinas and near fishing piers and launching lanes, **provided the development and operations of the ferry facilities do not interfere with current or future park and recreational uses**, and navigational safety can be assured. Terminal configuration and operation should not disrupt continuous shoreline access. **Facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons.** Shared parking arrangements should be provided to minimize the amount of shoreline area needed for parking.

Plan Map 4 in the Bay Plan provides further and specific guidance to "**Preserve** marina, beach, small boat launch, **windsurfing access, fishing pier**…

These policies—ignored in nearly every City of Berkeley document—establish a two-part test before a ferry terminal can be considered and additional policies that protect the existing recreational community. First, if land might be needed for future park and recreational use, it cannot be used for a ferry terminal. Current zoning efforts of the city might lead to a doubling of Berkeley's population, and cooler areas like the Bay's waterfront parks are critical for heat relief as the climate warms. Second, parking for recreational users cannot be usurped by ferry patrons. Finally, measures must also be taken to

preserve existing access points, and to mitigate any adverse impacts on existing access opportunities.

THE CITY'S PARKING STUDIES ARE INADEQUATE AND DO NOT ADDRESS BAY PLAN POLICIES TO PREVENT USURPATION OF EXISTING USERS

The city has not established a baseline of existing recreational use, or parking needs. Instead, the city has used irrelevant information which it then claims shows that there is plenty of parking available for recreational users. To demonstrate that parkers for a proposed ferry would not usurp the needs of recreational users protected by the Bay Plan, the city must understand what those needs are. The Kittelson report claims that the document provides ..."a comprehensive review of current parking conditions." On March 12, 2025, City staff went even further, claiming that they were using 18,000 data points to establish what current patterns are. Those claims are not true. In fact, the city has only developed parking counts on two weekdays during the recreational season.

The city had staff collect the number of parked cars, focusing on the presence of RV's, after an RV camp was cleared from the Seawall parking lot. Those counts were taken at 8:00 PM and 10:00 AM, times when few recreational users are in the marina. The forms that were used and the timing of the counts make it clear that the purpose of the counts was to determine whether cars, and particularly RV's, were parked in the marina overnight. The counts had nothing to do with establishing a baseline of recreational use and parking needs. Presentation of that data as a comprehensive review of current parking conditions at best reflects a misunderstanding of the proper use of data. When developing or interpreting a time series, it is standard engineering practice to keep data generated by different populations of behavior separate. Here the data collected by city staff inventories fourteen different parking lots in the marina, at a time when recreational activity is near a minimum. Those counts might reveal something about parking by ferry passengers and fishing boat passengers at South Cove West, or dog walkers and joggers at Cesar Chavez. But they do not provide any information about recreational use at the South Basin, which usually begins after noon on weekdays and continues until about 6:00 PM. Combining data from different populations also destroys whatever statistical value that data may have had. In the current case, including this data in the Kittelson report and representing this as a comprehensive review of current parking conditions misrepresents the number of recreational users during peak recreational season and times.

The city is aware of the potential for ferry riders to usurp recreational parking. Earlier studies by Nelson\Nygard recognized the problem of ferry passengers parking in the south basin. Their memorandum dated September 11, 2018, stated:

> Since August 29th, ferry passengers have been directed to park in the Marina Boulevard Lot with signage and communication by PropSF and Tideline to their customers. However, very few users, if any, have heeded this request. Ferry customers continue to park in South Coast East, J&K and L&M Lots due to a lack of enforcement. **Since reopening, South Coast East Lot experiences as much as 90% occupancy**.

The problem of ferry parkers usurping recreational users was well known to both BCDC enforcement staff and Parks and Recreation management; in a letter dated April 15, 2019, Scott Ferris acknowledged to BCDC that the approval of two small ferry leases—without consideration of the Bay Plan policies or public process—"**has had the effect of squeezing out visitors**..."

Notwithstanding this history, city staff told the planning Commission on May 10, 2023, that weekday parking utilization on that same lot was 5%. (slide 24, Power Point Presentation titled Waterfront Specific Plan for the City of Berkeley Public Tidelands Area.) In fact, data collected by city staff but not used in the Kittelson report shows parking utilization in those two South Basin lots as high as 96% on summer weekdays.

Stakeholders in the marina sent city staff more than a dozen time-dated photographs showing heavy use of the South Basin East and West and J & K lots, the closest overflow lot to the South Basin East and West lots. Those photographs, submitted by Gordon Stout, included aerial photos that showed that riders on the Genentech ferry continue to park in the recreational areas, usurping space for visitors. The city has made no attempt to quantify that use, although it has plenty of data since the lease for the ferry operation requires payment for each passenger boarding.

Stakeholders also commented, in writing, that the work program for Kittelson studies was not collecting sufficient parking information at the times when recreation use was greatest. The city went ahead with their plan to only measure use on five days—at a minimal cost of $22,000. Only two of those days were during the weekdays when ferry parkers were most likely to usurp parking needed for recreation. The data from those studies has not been released.

I noticed in the draft Kittelson report that city staff had completed additional traffic counts but they had not been used in the study. I submitted a Public Record Act (PRA) request, and received that data in a spread sheet titled "Waterfront Parking Data—collected by City

staff" Most of the data was collected at 8:00 PM and 10:00 AM—times when recreational use is minimal. But the city collected parking counts on 11 days between July 23, 2024, and August 23, 2024. This only represents one month and is not the busiest at the marina—according to the presentation to the Parks Commission on March 12, 2025, June is the busiest month. Data was only collected at 4:00 PM, which does not span the whole peak recreational period of 2:00 PM until 6:00 PM. However, for the two recreational lots closest to the proposed ferry terminal, use on weekdays was often more than 70% full, and as high as 96% (August 1), 92% (July 23), and 91% (July 31). The city has excluded these counts that indicate the parking lots that might be affected by development of a ferry terminal are already full and vulnerable to usurpation, arguing that the data involved—eleven data points—is "comparatively limited." The city prefers its two days of information and counts that were not taken during recreational periods. This is not an acceptable use of limited data and avoids the obvious solution—collect sufficient data to characterize existing recreational uses. Spend more than $22,000 on the fundamental issue raised by the proposed ferry terminal.

THE KITTELSON APPROACH OF COMBINING DIFFERENT POPULATIONS OF PARKING INFORMATION AND AVERAGING THE RESULT IS AN IMPROPER USE OF DATA

Earlier I established that proper use of time series data requires that different populations of data be kept separate. There are twelve different parking lots in the marina, and probably as many different recreational activities. Correct use of data, if sufficient relevant data were to be collected, would identify which parking lots are underutilized and when. That would be a valuable tool in determining whether ferry passengers could be accommodated without usurping existing recreational activities. The approach used in the Kittelson study improperly combines both different locations and different times. This destroys the statistical value that the data has and improperly implies that use is less than it actually is. In effect, times of little use are used to improperly dilute the significance of high use times, and the manipulated data is then presented as a comprehensive analysis.

FUTURE RECREATIONAL NEEDS HAVE NOT BEEN CONSIDERED

The cited BCDC policy reserves some waterfront land, including Berkeley Marina, as park priority areas, recognizing that the land might be needed for future recreation as population increases. The city has failed to account for growing recreational activities, like winging, a newer form of windsurfing, kayaking and swimming. As the climate warms, and as Berkeley provides zoning for a large increase in population in their land use plans and zoning, cooler refuges like Berkeley marina become more important. The city has made no

effort to characterize future recreational needs for the region, while it has accepted public funds for a regional recreational facility.

The lack of specific consideration for fishing, given the Bay Plan policies, is of particular concern. At one time, as many as 100,000 anglers fished from the Berkeley pier each year—an average of about 300 a day. Even if only half of them drive, that is a demand for 150 parking spaces—and they formerly parked on Seawall lot, now proposed to be parking for a new ferry terminal. We have seen how improved facilities attract new users at the South Basin East parking lot and at Albany Beach. But no effort has been made to provide either a baseline for such returning and new users, or any accounting for their infrastructure needs. The same concern exists for the reopening of the former H's Lordships restaurant, closed now for many years. A new lease of that building, or any new visitor-serving facility on the filled land, would generate parking use—which has not been considered.

THE PROPOSED FERRY TERMINAL WOULD HAVE CAPACITY FOR UP TO 3200 DEPARTING PASSENGERS

The project described in background documents would involve ferries with a capacity to carry 400 passengers departing from Berkeley, with eight departures a day. The Kittelson study uses a much lower estimate of passengers to evaluate potential impacts, selecting 2,110 ridership and the year 2040 for analysis. This is different from the plans presented in WETA's update of their long-term plan for 2050, dated April 12, 2023. On Page 24, in Table 11, it provides 4 different ridership forecasts for the proposed Berkeley service. The "Steady as it goes" scenario forecasts a ridership of 2,500. The "Throttle Back" scenario forecasts a ridership of 1,800. The "Chart New Course" scenario forecasts a ridership of 4,000. The "Tack to the Wind" scenario forecasts a ridership of 2,600. Instead of these scenarios in the 2023 document, the Kittelson report (page 16) uses an earlier, 2022 WETA business plan and only goes to 2040. They thus have a ridership total of 2,110, well below three of the WETA scenarios, or the actual capacity of the proposed facility. The use of an earlier report and an earlier year suggests a lower ridership—and thus misrepresents the level of passengers WETA is planning for. The more serious issue is that WETA plans for 400 passenger ferries and 8 departures from Berkeley. That is a capacity of 3200 departing passengers in the infrastructure that is being proposed. The city plan, and the Kittelson's parking studies, need to evaluate all the possible scenarios, including the capacity for up to 3200 departing passengers, to create a meaningful basis for evaluating consistency with the Bay Plan policies.

THE REPORT USES OPTIMISTIC ASSUMPTIONS ABOUT MODE SPLIT RATHER THAN DATA FROM BERKELEY'S SMALL FERRIES AND OTHER WETA TERMINALS

The city uses assumptions about mode split rather than readily available data of actual mode split. That approach, especially in combination with the practices of averaging parking, could significantly underestimate the demand for parking by ferry passengers. The Kittelson report significantly lowers the assumptions for those driving from the estimates and assumptions of Nelson\Nygard in their September 11, 2018, report. Berkeley has experience with three different small ferry operations in the marina since 2018 that could provide real data about mode split, instead of using assumptions. WETA also operates other terminals and has circulated surveys to estimate mode split. Richmond's facility is analogous to the proposed Berkeley facility because it is also located in the waterfront away from residential areas. There, 57% of passengers drive alone, and another 17% may carpool take transit, or be dropped off. That matches the mode split proposed by Nelson\Nygaard much more closely than the new, much lower assumptions used in the Kittelson report. Where there is a regulatory standard, as there is in the Bay Plan, assumptions that are not supported by substantial evidence in existing terminals, should not be used if they increase the risk that ferry parkers will usurp recreational parking. If the 60% drive alone or carpool and park figure recommended by Nelson\Nygaard is used, at least 630 drivers will be looking for a parking place in Berkeley marina—and potentially far more. The nearest parking lots are the high recreational use lots in the South Basin, which total only about 200 spaces. Usurpation of those lots could easily occur and would compromise or end much of the existing recreational use. City efforts to date have not considered the BCDC Bay Plan policy, or successfully controlled parking in the recreational areas; passengers on the Genentech ferry park in the South Basin West lot and the city has made no effort to quantify or control that use of scarce recreational parking.

BERKELEY NEEDS TO VERIFY BICYCLE USE RATHER THAN MAKE ASSUMPTIONS

While the Nelson\Nygaard estimate of 60% driving alone or carpooling has substantial evidence supporting it, the assumption that 18% of passengers will ride bicycles does not. The bike share at Richmond is 11%. It is a bit higher at Harbor Bay, (14%) but there is a substantial residential population close to that terminal. While bicycle advocates favor improving bicycle ways, it is not clear that 18% is a reasonable assumption. The most recent estimate of bicycle commuting in Berkeley was done in 2022 by the American Community Service and reports that only 3.4% of Berkeley commuting is done by bicycle. https://data.bikeleague.org/new-data-and-competing-narratives-a-look-at-census-and-streetlight-data/ Currently, over 91% of visitors to the marina report that they drive.

I'm often on my bike in the marina and observe the existing patterns. I have seen up to 6 bicycles in the bike lockers next to the bait shop, and a single bicyclist arrive and take the Genentech ferry. It is obvious that 18% of the visitors to the marina, or those using the Genentech ferry, do not ride a bike. The city has placed a ten-space bike locker outside of the bait shop. It requires a cell phone and app to use, and like most such endeavors, that generates total use and locational information. While that information exists, and doesn't need to be generated, the city has not used that data, or other methods, to determine whether such investments are changing mode split. Scott Ferris has told the Berkeley Democratic Club that he hopes that more people will ride a bike. Hope is not part of a program, or substantial evidence that existing efforts are making a difference.

THE KITTELSON REPORT DOES NOT ADDRESS THE BAY PLAN POLICIES TO PRESERVE EXISTING RECREATIONAL ACCESS

Earlier I established the third test in Bay Plan policies, protecting existing recreational amenities like the pier, the beach, and windsurfing. With the current closure of the East Dock of the South Basin, and the damage to the ADA accessible float at the middle dock, the lack of city maintenance of existing recreational facilities—the justification for the fill they now target for a park and ride commuter facility--has come into sharp focus for stakeholders. Other vital recreational facilities—the path on the east side of Seawall Drive lot, the Berkeley fishing pier, the sheet pile seawall in the marina that holds up the fill, maintenance of docks in the marina which pays 67% of the marina revenue, and dredging of the South Basin—have been ignored, allowing the promised recreational amenities to degrade. Despite that, the marina remains a vital—and diverse—community of stakeholders which have not been characterized by the city's planning efforts.

I draw attention to the cove next to the H's Lordships Restaurant, which has been used by windsurfers for access to the Bay for over thirty years and now provides access for swimming. That cove was identified as a critical access point in the 2004 Marina Plan, and the city received a Coastal Conservancy grant and completed a design for improving that access. Yet nothing was built, and the city has closed off the parking lot that provided access for users. The most recent city plan, presented at the March 12, 2025, Parks, Recreation and Waterfront Commission proposes to use virtually all of the bay fill for ferry parking, compromising landscaping, the existing uses and the pathways along the area.

FEASIBILITY

A number of questions by Commissioners at the recent Parks Commission meeting went unanswered, or only partially answered. City staff and documents have insisted that Berkeley will not pay for the subsidies required to operate the ferry system and have not provided a complete inventory of the costs that the city has agreed to pay in the existing MOU. When the initial Feasibility Plan was issued and Berkeley entered into an MOU with WETA, Berkeley agreed to pay the entire cost of the recreational portion of the pier and all shoreside improvements for recreation. At that time (2019), the estimated cost of those facilities was $29 million. The latest drawings appear to involve much more substantial and expensive improvements.

On the issue of subsidizing operations, I draw your attention to this provision in the 2022 Berkeley Ferry Service Business Plan, prepared by Economic and Planning Systems, Inc.

> At the local level, and in partnership with local employers and developers, the City of Berkeley can incorporate funding for ferry operations or shuttle services in future Transportation Demand Management plans. Private funding from local developments through Transportation Demand Management agreements and plans can be negotiated and may generate operating subsidies.

Fairly clearly, WETA is not making plans, and does not have funding, for the necessary operational subsidy and expects Berkeley employers, developers, or taxpayers to contribute.

Even a minimal Transportation Demand Management plan is expected to cost at least $550,000 a year according to estimates prepared by Nelson\Nygaard in their January 2022 “Parking and Mobility Framework.”

There are other sources which indicate Berkeley is expected to generate operational and subsidy costs. These quotes are from the Berkeley Ferry Service Business Plan 03/17/2022.

> **Page 39:**
> **Terminal Expenses**
> Terminal expenses refer to the costs that each service route pays towards maintenance and usage of the terminals at Berkeley, San Francisco, and

Larkspur. These expenses are estimated to be $135,000 annually. The capital costs of constructing the Berkeley terminal are not incorporated in these estimates but discussed in Chapter 8.

Page 47:
Local Funding
It is not expected that the City of Berkeley will subsidize operations of the ferry services from its General Fund. However, local (City) funding sources may also be established, similar to the funding provided by a local property tax charged in Bay Farm Island or a portion of Contra Costa County sales tax revenue for the Richmond service to provide an operating subsidy. One option could include a Transient Occupancy Tax surcharge on hotel night stays in the Marina that would reinvest revenue in the Berkeley waterfront and support maintenance of the pier and shared parking facilities.

The city has not been forthcoming about the exposure of Berkeley to ongoing costs for the operation of a terminal and parking area, or the impact that may have in leaving the current maintenance needs for recreational uses—the purpose of the marina—unmet.

BERKELEY NEEDS TO TEND TO ITS EXISTING RECREATIONAL FACILITIES FIRST

As I noted in the introduction, Berkeley has failed to fulfill the promises it made to the public and BCDC, not merely on this filled site, but throughout the waterfront. Berkeley created a structural deficit in the marina fund by refusing to use the city-wide parks tax funds for maintenance of the parks in the marina. As noted by the Division of Boating and Waterways, the city has used as much as $1.5 million a year in boating revenue to maintain those parks, rather than maintaining those boating facilities. Slip holders pay 2/3 of the cost of maintaining the marina, have other marina options, and expect a functional marina. The recent closure of the East Dock in the South Basin and the float which meets Americans with Disabilities Act standards also in the South Basin, has brought these practices into sharp focus. A list of facilities which have not been adequately maintained includes:

- Water intrusion into the old landfill which is now Cesar Chavez Park has resulted in oversight and requirements for correction from the Regional Water Quality Control Board and the Air Pollution Control Board;

- Pathways at Cesar Chavez Park are in poor condition and do not meet the standards of the Americans with Disabilities Act
- The marina entrance channel was not dredged for over twenty years, and the sight of boats stuck in the mud was a frequent occurrence
- The docks and electrical systems at the marina were not maintained, leading to departure of many tenants
- The south basin, home to the Cal Sailing Club and Cal Adventures, has filled with sediment and often can't be used to give lessons
- The seawall that holds the fill approved in 1967 is in danger of failing
- Berkeley pier is closed
- Two of the three docks in the South Basin used for recreation are closed or limited for people with disabilities
- Streets and paving in many of the parking lots in the marina are failing
- H's Lordships restaurant has been closed for many years and needs at least $6 million in repairs. As a result, the marina fund will not derive any net revenue for at least a decade after it is re-occupied.

While Berkeley adopted an asset management policy in 2022, it has done nothing to implement that policy in the marina, or in the current Waterfront Specific Plan. The total repairs that are needed is at least $94 million, yet the city is focusing on a ferry project that will not generate any revenue.

The city needs to focus on the basics of getting the waterfront preserved and maintained. Not on poorly conceived and executed parking studies.

Very truly yours,

Jim McGrath

Sometimes I keep e-mails as an in-box. Your e-mail is just wrong. You did not use counts from 4pm and 6 pm—except for 11 days—the data withheld—you did not collect any counts at those times.

Getting the facts straight is really not that hard.

Hi Jim,

Thanks for your email, and your comments at the Commission meeting. I agree with you that six days of data, by itself, is insufficient for our goals for this Study. In addition to the six days of 'continuous' data collected by the Kittelson team, the study will also utilize daily car counts collected by the Marina staff over the past four years and continuing through the Study, at all parking lots, at 8 am, 10 am, 4 pm, 6 pm and 8 pm. The new intercept survey data will also be used to inform the existing condition baseline, and capture some of what you noted in your email regarding the various different users of the Waterfront.

As you mentioned, there are certainly special events where the entire Waterfront is full, but the City also understands and acknowledges that South Basin East and West lots (as well as O and J lots) reach full capacity at times outside of these outlier events, especially during peak summer months. The Transportation Demand Management (TDM) strategies for the Pier-Ferry Project must ensure that Ferry riders do not park outside of designated ferry spaces, including not parking in the South Basin parking lots. Our expectation is that the Study currently underway will provide us with specific and implementable strategies to achieve that.

Best,

Subject: Parking study

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Lisa--I appreciated your presentation last night, and I found aspects of it encouraging. You clearly have spent some time reading public comments, and much of your presentation responds well to that. I was particularly encouraged by the statement that one of the study goals is to "Protect non-ferry parking spaces." That is the first explicit recognition I have seen in a WETA or city document that reflects the BCDC Bay Plan Policies. But of course, those parking spaces that the city and WETA have proposed to establish as ferry parking spaces were permitted bay fill, approved to provide recreational parking for the commercial recreation and parks in the marina.

I am not convinced that the scope of work is sufficient to identify the location, existing use, and pattern of use of the recreational parking spaces that need to be protected. As you know, data representing different populations cannot be combined for analytical purposes without destroying the value of that data. Or as I learned in graduate school, lumping data about different populations together makes them look like they are generally distributed when they are not. There are many different recreational groups that use the marina, and they park in different areas, at different times, and different intensities. There are those who walk or run at Cesar Chavez, those who walk their dogs there, recreational boaters who rent a slip, recreational boaters that launch at the ramp, or at the hoist near Cal Sailing and Cal Adventures, kayakers, outrigger canoe communities, the group who play water polo in kayaks, anglers from land and from commercial boats, water sports groups with many different kinds of equipment, a rapidly growing community of swimmers, and the general public who come to walk or ride their bikes on the bay trail, or simply to enjoy the view. Often overlooked is the acceptance of dining with a view as a commercial recreational activity that meets BCDC's criteria,

My experience and observations, with the photos and counts that I have sent to the web site are mostly from the south side of the marina. The improvements to the parking area and Bay Trail have significantly increased use by the general public.

You need to have a data collection program that correctly identifies all of these users and the patterns that they have and the facilities that they need--and doesn't lump them into one data base. As I noted last night, peak use like the Fourth of July, the Blue Angel part of fleet week, a Cal Sailing Club open house, or a regional event like a tri-athalon or an outrigger event might not be a fair representation of use--they take every parking space. Your data collection must be sufficient to make sure that you are not unfairly combining uses and missing patterns. I don't believe that a total of six days of car movement and parking monitoring is adequate to do this. It may be adequate to identify areas for further and more intensive analysis. But I am convinced that the large number of photos and counts of full parking lots in the two south basin lots are sufficient

to establish that the city needs to have a much more robust analysis of those patterns of use.

To Liza McNulty **Copy** Andrew Sullivan and 10 others

After holding a public scoping meeting on May 5, 2025, the City of Berkeley has issued a new parking report dated May 7, 2025, by Kittelson & Associates. Upon careful reading, it becomes clear that this report anticipates yet another change in the project description for the pier ferry project. The city and Kittelson seem to have changed their conclusion that there is ample parking in the marina for all users, that ferry parkers will be satisfied with 250 spaces, and there will be no usurpation of the limited recreational parking in what the Nelson/Nygaard memorandum of September 11, 2018, calls the central facilities. The revised plan now calls for overflow parking to be directed to the Skates/N lot and the informal parking areas along Marina Boulevard adjacent to McLaughlin Eastshore State Park.

On page 2 of the report, the Kittelson Memorandum concludes that there are "at least 66 spaces in the Skates/N Lot" and 83 spaces along Marina Blvd. The report does not mention the distance to the parking spaces along Marina Blvd, over 2000 feet. The city has prepared various drafts of improvements to establish formal parking areas along Marina Boulevard, and has discussed a shuttle service in public meetings, but neither of those elements are included in the most recent transportation demand study.

The May 7, 2025, draft addendum does not provide the new data that it claims support these conclusions. It states that there are parking counts on 554 days and acknowledges that there are only limited counts apparently among those days at 2 pm and 4 pm. It does not reveal how many counts were taken at those times or reveal that data in a spread sheet. It does not appear to include the 11 days of counts that were not used in the earlier Kittelson draft memo and makes no attempt to rationalize this new conclusion with previous reports by Kittelson, the city, and Nelson/Nygaard. Thus, there is no way to tell from the issued report how robust the data is. The report does acknowledge that the South Cove West lot reaches peak occupancy between 1 and 3 on weekdays, the time when usurpation of recreational parking has been an ongoing controversy.

It is useful to return to the Nelson/Nygaard Report cited above to see whether this new report meets the substantial evidence test established under CEQA. Several quotes

from that report cast doubt on the availability of parking in proximity to the proposed new terminal and the efficacy of city efforts to prevent parking usurpation. On the former issue, Nelson/Nygaard concluded:

> Peak parking demand met or exceeded 85% in the Central Parking Lots [and] During weekdays, centrally-located lots, particularly the J & K and L&M Lot, experience as much as 89% and 93% occupancy respectively.

For the South cove lots, they concluded:

> The South cove lots have multiple users…resulting in a peak period in which the lots are full. [and that despite city efforts to direct ferry riders to lots like the Marina Boulevard lot] Ferry customers have not heeded recent signage (placed on South Cove, J&K, and L&M Lots) to park on Marina Boulevard instead.

Of course the existing and recent small ferry operations were/are far closer to Marina Boulevard than the 2,000 + feet now claimed as a solution. Without the release of the underlying data, including the city counts mentioned in my March 18, 2025, letter on the earlier Kittelson Report, the public has no way to review the quality of the data underlying the blithe conclusions of city staff and their new parking consultants. City staff has been less than accurate in previous public meetings, assuring the Planning Commission on May 10, 2023, that parking use at those same South Cove lots was only 5%. Remember, the Nelson/Nygaard report showing "periods in which the [South Cove] lots are full" was provided to the city staff more than 4 ½ years before that presentation—and the presentation with its erroneous conclusion is still posted on the city website. The importance of public review and transparency on this project could not be clearer.

This new change in the apparent project description, and another new proposal to initiate parking charges for the marina , illustrate the need for the city to complete a Waterfront Specific Plan (WSP) before they pursue an EIR for the pier ferry project. Since the city now believes it is necessary to use areas of the waterfront that are subject to changed land use designations in the draft WSP, and to establish parking charges for the whole marina, it can readily be seen that the pier ferry project is not independent of the WSP and these projects cannot be pursued without violating CEQA's requirement to analyze the whole of a project, including future and related projects.

Subject: Scoping comments for proposed pier ferry project EIR

Dear Ms. McNulty:

The following are my comments on the NOP. I incorporate with these new comments my letter of March 18, 2025, on the Kittelson report, which points out in detail the inadequacy of that report to support an EIR. Also incorporated and attached are two e-mails to you, pointing out that the scope of study for Kittelson was not adequate, and identifying problems with the May 7, 2025, Kittelson addendum. I have submitted a Public Records Act request to gain access to the underlying data used in the May 7, 2025, addendum, and reserve the right to augment my comments about that report when I have been provided with the information I requested.

PROJECT DESCRIPTION

For over forty years the courts have consistently held that an accurate and stable project description is a bedrock requirement of CEQA—the *sine qua non* (that without which there is nothing) of an adequate CEQA document:

> Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal's benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal (i.e., the "no project" alternative) and weigh other alternatives in the balance. An accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR.

(*Inyo*, *supra*, 71 Cal.App.3d at 192-93.)

The ability of informed citizens to participate in environmental review is a key component of CEQA. (*Washoe*, *supra*, 17 Cal.App.5th at 285 ["Informed public participation is essential to environmental review under CEQA."]; *Inyo*, *supra*, 71 Cal.App.3d at 192 ["The EIR process facilitates CEQA's policy of supplying citizen input."].) Through the EIR process, CEQA "provide[s] public agencies and the public in general with detailed information about the effect which a proposed project is likely to have on the environment." (*Washoe*, *supra*, 17 Cal.App.5th at 286 [quoting Pub. Res. Code § 21061].)

In *Washoe*, the court evaluated a DEIR prepared by the California Department of Parks and Recreation which described five different alternatives for a project, including an existing 18-hole golf course, to reduce sediment discharge from the Upper Truckee River into Lake Tahoe. (*Washoe*, *supra*, 17 Cal.App.5th at 283.) The DEIR did not identify a preferred alternative but instead proposed that, after comments had been received on the DEIR, the Department would identify the preferred alternative in the FEIR to "determine which alternative or combinations of features from multiple alternatives will become the preferred alternative." (*Id*. at 283.) In the FEIR, the Department identified "[a] refined version of Alternative 2" as the preferred alternative. The Department subsequently certified the FEIR. (*Id*. at 283-84.) The petitioners sought to set aside the approval of the project because, *inter alia*, the DEIR did not contain an "accurate, stable and finite" project description. (*Id*. at 287.)

A few examples should demonstrate this problem here. First, the NOP acknowledges that "the City may choose not to implement these [recreational improvements] (page 3). Second, the city's proposal for ferry parking, and for management of conflicts with recreational parking, continues to change. Some of the material on the city web site calls for a 250-space parking lot for ferry parking. But one of the exhibits submitted to BCDC for review by the Design Review Board now designates that area, part of the bay that was filled for recreational use, as a paid parking lot, apparently for ferry riders. Yet another exhibit now shows the addition of 110 spaces to the existing parking lot—without clarifying the number of spaces proposed for ferry parkers. Is it 250, as most documents state, or is it approaching the 400 spaces that WETA sought in 2008? An accurate depiction of the area and its proposed future use was not included in the NOP. That in turn has a direct effect on the usurpation of parking now used for recreational access by swimmers, wingers, windsurfers, and anglers.

As of May 7, Berkeley has proposed two additional changes in the project description. Berkeley circulated an addendum to the Kittelson study which now proposes that the Skates/N Lot" and Marina Boulevard be used as overflow lots. Few details of those new proposals are available. As part of the regular meeting of the Parks, Recreation and Waterfront Commission, the city is now also proposing to start charging for parking at the marina. It is impossible to develop a defensible EIR when the project description keeps changing. The problems with these specific proposals will be discussed below.

SUBSTANTIAL EVIDENCE/ENVIRONMENTAL SETTING

Section 15064(f)(5) of the CEQA Guidelines requires that information used in an EIR shall not include "…speculation, …or evidence that is not credible…" Instead, it requires that "**Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts**."

In many of the background documents used to develop the current project description and public presentation, Berkeley has ignored readily available substantial evidence and has instead relied upon expert opinion that depends on modeling rather than facts about the current ferry operations by WETA and by Berkeley lessees. Readily available information about parking utilization, developed nearly a year ago, was not used in developing the Kittelson parking report. That information, and details about the parking counts that Kittelson was told to rely on, was only obtained through Public Records Act requests. Now the city has released an addendum to the Kittelson report. However, that addendum does not reveal the underlying data nor does that addendum seem to use the few data points where parking counts were taken during the peak hours of the summer recreational season. Conclusions provided with no underlying analysis that provides the necessary data and links it to the reasoning fails the substantial evidence test. My e-mail to Liza McNulty explaining the problems with the addendum is attached and incorporated by reference.

The city must develop an environmental setting section for the document (Guidelines Section 15125) that "normally constitute{s} the baseline physical conditions..." Such a baseline must include enough information about existing recreational use, existing parking patterns, existing bicycle use, and existing ridership on the Genentech Ferry, to allow analysis of the impacts of the proposed project on recreation and on consistency with Berkeley and BCDC policies and other regulatory and planning standards.

RIDERSHIP PROJECTIONS

The NOP and supporting documentation on the city web site do not use substantial evidence or consistent information to develop realistic projections of ridership. Available information from the ferry operations that have operated in Berkeley since 2016 and from similar WETA ferry routes is ignored, and speculative models are used. Even then, the modeling information is used selectively and inconsistently without careful explanation.

Realistic projections, based on substantial evidence not speculation, are a necessary element of any project description for preparing an EIR. Realistic ridership projections in turn drive both impact analysis and questions of feasibility as a term of art under both the California Environmental Quality Act and the McAteer-Petris Act. Realistic analysis, and its implications for taxpayer cost and continued recreation are also fundamental issues for Berkeley voters. Substantially more work needs to be done, and information from existing efforts needs to be revealed.

Berkeley has approved three different small ferry operations, starting in November of 2016. The city did not go through any public process in approving the first two ferry leases to Prop SF and Tideline, considering the implications of the BCDC Bay Plan policies regarding ferries, or coordinate that effort with BCDC. Riders began parking in the recreational parking lot that had been improved with public funds and was subject to continued BCDC jurisdiction, usurping recreational parking, in conflict with Bay Plan policies. An

indeterminate number of riders of the Genentech ferry still park in those lots and the city refuses to document that use. When I visited the marina May 15, 2025, by bicycle at 9:15 am, at least ten cars that appeared to be ferry riders were parked in the South Basin East lot, and only one bicycle was visible in the bike lockers next to the bait shop. Other ferry users were parked in the South basin West lot.

The City Manager informed the Council about the initiation of ferry service in a memorandum dated November 21, 2016, that stated:

> Six months into the pilot program, the City will begin an RFP process that should result in a more long-term agreement…As part of this process, the City will hire a parking and traffic engineer to study Waterfront use patterns and impacts and **will provide more permanent recommendations for all Waterfront parking lots**. (emphasis added)

The city derived revenue from a per passenger fee of $1, as noted in the November 16 memorandum. Yet the city has not used this data to develop the current proposal or published a final report on the results of the six-month pilot project. I obtained some of the records of ridership, which seem to be reported simply as revenue. If the financial records provided to me are accurate and complete, Tideline's best month seems to have been May 23, 2017, to June 20, 2017, with 1085 passengers. That's about 54 passengers per day on average, which as we know, mostly drove and parked their cars primarily in the South Basin recreational lots, taking up about 25% of the parking spaces.

Because there is substantial price elasticity in the demand for ferry services, and in the net requirement for public subsidy, the discussion of ridership projections must be accurate, stable, and supported by substantial evidence that reflects an understanding of price elasticity and its effect on ridership. The assumptions about pricing and the impact on demand must be transparent and must not change. There are multiple citations on WETA's web site and in WETA Board packets acknowledging price elasticity. During the pandemic, WETA lowered the fees for ferry passengers well below their 40% farebox recovery policy to compete with BART, with adult fares as low as $4.70; before the pandemic the standard adult fare from Alameda and Oakland was $7.20. That cheaper fare resulted in more ridership—but decreased operational revenues to an unsustainable level. This is prima facie evidence that price elasticity is a major factor in demand for ferry services and cannot be ignored.

WETA staff and board are aware that raising costs for riders, either fares or parking charges, could affect demand. The WETA Board is considering an MOU with Alameda since Alameda is planning to begin charging for parking. That MOU provides as a stipulation: "Ensure paid parking is implemented such that ridership at the Alameda ferry terminals is not considerably impacted."

The subsidies from Regional Measure 3 are not sufficient to cover the shortfall in operational expenses with such a low fare. The May 8, 2025, agenda packet for the WETA Board reports that the current operating revenue is not sufficient to sustain the existing network. (page 107) It further reports that an additional $55 million in revenue would be needed over 12 years to support adding a Berkeley route. That is more than $4 million a year. In the last few years WETA has used Federal pandemic relief funding to lower the fares; those funds have been exhausted. The shortfall in farebox revenue covered by those funds was well above the available operational subsidy in Regional Measure 3. Total operational costs for 2022 were $62 million, with only $12 million secured by fares. Regional Measure 3 only provides $35 million in funding to subsidize fares. Currently, cost recovery from such lowered fares is well under the 40% cost recovery policy on all routes, with the overall system only generating 22% of its revenue from fares and Richmond only generating 13%. (May 8, 2025, WETA Board Agenda packet).

Increasing fares directly to meet operating costs, or indirectly to charge for parking at the proposed new terminal, is certain to reduce demand for ferries. The nature of reduced demand due to price elasticity needs to be established and used in considerations of feasibility. Such information is substantial evidence that cannot be ignored or replaced by speculation based on models. The potential effect of charging for parking is quite substantial. Earlier reports by Nelson/Nygaard estimated the cost of parking management at $550,000. The city is currently entertaining a substantially more comprehensive and expensive set of measures but has not provided a cost estimate. If the cost to effectively manage parking were to be on the order of $1,000,000, and that cost were to be recovered by parking fees, the daily parking fee could be as high as $16 per day. (250 parking spaces times 250 weekdays, excluding holidays, = 62,500 days. $1,000,000/62,500 parking days = $16 per day.) This nearly triples the cost of a round-trip ferry ride and obviously would reduce demand. Even the lower cost estimate made in earlier studies would result in a parking fee above $8 per day unless parking is actively subsidized by Berkeley or WETA, or by recreational users as the city is currently considering. To be sure, if ridership does not materialize, or if riders successfully park in free recreational areas, the city or WETA would have to cover even more of the annual operational costs.

The prototype small ferry operations are relevant because Tideline and PROP SF charged higher fares than Berkeley is anticipating for a WETA ferry, and Tideline currently operates a ferry which is funded largely, if not completely, by Genentech. That information is readily available, substantial information that needs to be utilized in determining ridership and the impact of increased costs, either fares or parking fees, on demand. Since actual ridership during the last decade seems to be well below that projected by models, unless heavily subsidized, that ridership pattern provides substantial information about the impact of pricing on demand and must be revealed and used in preparation of an EIR. At present, Berkeley and WETA are projecting ridership using models and do not include the lessons of existing operations, the two small ferry operators, or the impact of price increases. Ten years after approval of a pilot project intended to develop information about the feasibility

of ferry operations at Berkeley, the city has not completed and made public any analysis of the lessons learned.

Beyond the problems with modeled demand that does not reflect price elasticity or recent experience, the city is using an outdated business plan and the year 2040 to minimize the potential impact of ridership on recreational use. The city is projecting only 915 departing passengers from Berkeley, based on a 2022 WETA business plan. (Again, inconsistent projections are used, with the Kittelson parking study using yet a different number.) This is different from the plans presented in WETA's update of their long-term plan for 2050, dated April 12, 2023. On Page 24, in Table 11, it provides 4 different ridership forecasts for the proposed Berkeley service. The "Steady as it goes" scenario forecasts a ridership of 2,500. The "Throttle Back" scenario forecasts a ridership of 1,800. The "Chart New Course" scenario forecasts a ridership of 4,000. The "Tack to the Wind" scenario forecasts a ridership of 2,600. (Ridership as used in these documents represents two-way travel, so departures are half of that, ranging from 900 to 2000.) The ferry system proposed has even greater capacity, offering 400 seat vessels and 8 morning departures, or a capacity of 3200 departing passengers. All these different projections need to be evaluated in the EIR, and if necessary, *enforceable* mitigation measures must be included to prevent significant adverse impacts, namely usurping recreational parking.

The city cannot claim that the baseline for purposes of all EIR considerations is the level of recreation and associated parking during 2025. The city has failed to maintain recreational facilities, often after accepting grants to build those facilities, and closed parking lots that would support greater recreational access if they were not closed. The city has closed the pier, the nearby parking lot, the east dock in the South Basin, and H's Lordships restaurant. All of those supported substantial recreational use and required parking. Allowing those facilities to deteriorate and then claiming that their former use should not be considered the baseline is improper. The city should not be allowed to artificially distort the baseline to make usage appear to be artificially low. For example, in *Save Our Peninsula, supra,* 87 Cal.App.4th 99, 124-125, the court held that the city could not rely on a water usage baseline that was artificially decreased only months prior to the release of the CEQA document. Instead, the baseline was required to be the actual average levels of historic levels of usage from past years. The city rather should use the BCDC standard and analyze the existing and future recreational needs, much of which is impossible now because of the city's deliberate neglect. For example, in the case of fluctuating usage, it is appropriate to use the highest level of actual usage from the past as the baseline. For example, in the case of *Fairview Neighbors v. Cnty. of Ventura* (1999) (70 Cal. App. 4th 238, 242) the court allowed traffic numbers occurring when the mine operated at peak capacity pursuant to the prior CUP to be the "baseline," since mine operations were widely variable depending on market factors. The peak capacity (over 810 truck trips) was actually achieved in years prior, so it was not a mere hypothetical situation. The court rejected the appellant's claim that actual existing traffic numbers (at the time of the EIR) had to be used. Thus, in the situation fluctuating usage, a description of baseline environmental setting may reasonably include the area's established levels of prior use. (*San Joaquin Raptor*

Rescue Ctr. v. Cnty. of Merced (2007) 149 Cal. App. 4th 645, 658.) Here, with a recreational resource that receives its highest use in the summer when different recreational programs and camps take place in the south basin, and where BCDC's Bay Plan policies specifically state that ferry parking cannot usurp recreational parking or displace existing or future recreational needs, the intent to protect peak summer activities is clear.

PIECEMEALING

CEQA defines a "project" broadly, as the whole of project, including future and related projects. CEQA mandates "that environmental considerations do not become submerged by chopping a large project into many little ones -- each with a minimal potential impact on the environment - which cumulatively may have disastrous consequences." (*Bozung v. LAFCO*, 13 Cal.3d 263, 283-84 (1975); *City of Santee v. County of San Diego*, 214 Cal.App.3d 1438, 1452 (1989).) Before undertaking a project, the lead agency must assess the environmental impacts of all reasonably foreseeable phases of a project and a public agency may not segment a large project into two or more smaller projects in order to mask serious environmental consequences. As the Court of Appeal stated:

> "The CEQA process is intended to be a careful examination, fully open to the public, of the environmental consequences of a given project, covering the entire project, from start to finish. . . the purpose of CEQA is not to generate paper, but to compel government at all levels to make decisions with environmental consequences in mind." (*Natural Resources Defense Council v. City of Los Angeles*, 103 Cal.App.4th 268 (2002).)

Similarly, an initial study must consider the "whole of an action." 14 Cal. Code Regs. § 15378(a). That means:

> "[T]he environmental review accompanying the first discretionary approval must evaluate the impacts of the ultimate development authorized by that approval. ... Even though further discretionary approvals may be required before development can occur, the agency's environmental review must extend to the development envisioned by the initial approvals. It is irrelevant that the development may not receive all necessary entitlements or may not be built. Piecemeal environmental review that ignores the environmental impacts of the end result will not be permitted."

See Kostka, et al., *Practice Under the California Environmental Quality Act*, § 6.52, p. 298.

Berkeley and WETA are proposing to prepare an EIR on a ferry terminal on land filled for recreational purposes. Under the current city Waterfront Plan, which was adopted in 2003, that area is not designated as a ferry terminal. As discussed below, that plan inconsistency itself creates a significant impact under CEQA. The city is preparing a revision to that plan, now titled the "Waterfront Specific Plan", but has not completed that plan or prepared any

environmental documents that cover the whole of the waterfront. The city has jurisdiction over all the filled land, and the marina basin west of the East Shore State Park, this area, the marina basin and adjacent land, and Cesar Chavez Park. The current draft of the WSP is considering development scenarios that could triple the level of development in the marina, as well as designate land for a ferry terminal.

The city takes the position, established in a memorandum to the Council on November 18, 2024, titled "Update of the Waterfront Specific Plan for the Berkeley Public Tidelands Area", that:

> ...the Pier Ferry Project does not depend on adoption of the WSP to occur [and] the upcoming Pier Ferry public process will precede the drafting of the CEQA document [for the WSP]

With no adopted plan that designates this site for a ferry terminal, and with a plan under preparation that covers this site and could allow a tripling of development on the city land, I believe this conclusion is incorrect. The latest changes proposed by city staff, use of the Skates/N lot and Marina Boulevard for parking, and instituting parking fees throughout the waterfront, make it even clearer that the current ferry project does not have independent utility. It apparently depends on land under consideration for other uses in the WSP, and revenues generated by areas covered by the WSP. The update of the WSP is clearly a "reasonably foreseeable future" action that is necessary for the approval of the Ferry Terminal Project. Redesignation of the land in question, and analysis of the related projects that are under consideration, is necessary to avoid improper piecemealing under CEQA. Independent utility alone is not sufficient to absolve the city of its responsibility to evaluate the whole of the project, which can clearly be seen as the redevelopment of the entire waterfront.

There are similar piecemealing concerns with the proposal, presented to the Parks, Recreation, and Waterfront Commission on May 14, 2025, to begin charging for parking. Berkeley has long announced its plans to control use at the marina in various planning and policy documents, as long ago as 2016 (see discussion of ridership projections.) Instituting parking fees was a strategy under consideration in the WSP and its predecessor effort and is intended to limit travel to this regional park of State Tidelands by automobile. For example, in a February 16, 2021, work session memo to the Council, staff stated: "Paid parking at various locations at the Waterfront could generate additional revenue for the City's Marina Fund, while simultaneously **dis-incentivizing car-based traffic to the Waterfront**."

The Parking and Mobility Framework, January 2022, by Nelson/Nygaard included an extensive discussion of paid parking, beginning with: "Paid parking is an **effective tool for managing demand** and turnover in the most convenient, high-demand parking spaces." and:

- **Paid parking must be implemented as part of a Waterfront-wide parking strategy to avoid spillover impacts on free or unregulated parking nearby**.
- Targeting parking fees to specific users (such as ferry commuters) is potentially challenging, and should be avoided if possible. Such a strategy is difficult to enforce and may require creating physical barriers for cars that can hinder flexible shared parking approaches.
- Pricing can and should reflect demand and convenience. The most centrally located "premium" spaces could have a higher hourly price, while "value" spaces in more distant underutilized lots could be cheaper or free.
- A value/premium parking system should be supported with convenient pickup/drop-off zones (PUDO) that allow people to load and unload gear and equipment close to their destination before parking a bit further away.
- Recommendation for the BMASP: Include a comprehensive (not ferry-only) demand-based pricing strategy in the full build-out scenario. Identify all locations in the Waterfront where demand-based pricing may be appropriate.

Given these clear and repeated statements of intent, it can readily be seen that neither the proposal for a pier-ferry project that depends on land designated for additional commercial use in the WSP, nor the parking fees under consideration, are independent. The whole WSP, including parking fees and the pier-ferry project, is simply one project under CEQA.

CUMULATIVE IMPACTS

If the city contends that the Ferry Terminal and the WSP are separate projects, rather than a single piecemealed project, it still must analyze the two projects' cumulative impacts because the WSP is a reasonably foreseeable future project. An EIR must discuss significant cumulative impacts of reasonably foreseeable future project. (CEQA Guidelines section 15130(a).) This requirement flows from CEQA section 21083, which requires a finding that a project may have a significant effect on the environment if "the possible effects of a project are individually limited but cumulatively considerable. . . . 'Cumulatively considerable' means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." "Cumulative impacts" are defined as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." (CEQA Guidelines section 15355(a).) "[I]ndividual effects may be changes resulting from a single project or a number of separate projects." (CEQA Guidelines section 15355(a).)

"The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (*Communities for a Better Environment v. Cal. Resources Agency ("CBE v.*

CRA"), (2002) 103 Cal.App.4th 98, 117.) A legally adequate cumulative impacts analysis views a particular project over time and in conjunction with other related past, present, and reasonably foreseeable probable future projects whose impacts might compound or interrelate with those of the project at hand. "Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (CEQA Guidelines § 15355(b).)

> As the court stated in *CBE v. CRA,* 103 Cal. App. 4th at 114:
>
> Cumulative impact analysis is necessary because the full environmental impact of a proposed project cannot be gauged in a vacuum. One of the most important environmental lessons that has been learned is that environmental damage often occurs incrementally from a variety of small sources. These sources appear insignificant when considered individually, but assume threatening dimensions when considered collectively with other sources with which they interact.

(Citations omitted).

For example, in *Friends of Eel River v. Sonoma County Water Agency*, (2003) 108 Cal. App. 4th 859, the court held that the EIR for a project that would divert water from the Eel River had to consider the cumulative impacts of the project together with other past, present and reasonably foreseeable future projects that also divert water from the same river system. The court held that the EIR even had to disclose and analyze projects that were merely proposed, but not yet approved. The court stated, CEQA requires "the Agency to consider 'past, present, and probable future projects producing related or cumulative impacts . . . .' (Guidelines, § 15130, subd. (b)(1)(A).) The Agency must interpret this requirement in such a way as to 'afford the fullest possible protection of the environment.'" (Id., at 867, 869.) The court held that the failure of the EIR to analyze the impacts of the project together with other proposed projects rendered the document invalid. "The absence of this analysis makes the EIR an inadequate informational document." (Id., at 872.)

Thus, even if the city contends that the WSP is a separate project, it must still analyze its impacts together with the Ferry Terminal Project and the proposed new parking fees in the present EIR because the WSP project is a reasonably foreseeable future project that will have significant cumulative impacts.

CONSISTENCY WITH ADOPTED PLANS AND STATUTORY REQUIREMENTS

Section 15125(d) of the CEQA Guidelines requires that:

> The EIR shall discuss any inconsistencies between the proposed project and the applicable general plans and regional plans...**including ...regional land use plans for the protection of ...San Francisco Ba**y...

Where a local or regional policy of general applicability, such as an ordinance, is adopted in order to avoid or mitigate environmental effects, a conflict with that policy in itself indicates a potentially significant impact on the environment. (*Pocket Protectors v. Sacramento* (2005) 124 Cal.App.4th 903; *Georgetown Preservation Society v. County of El Dorado* (2018) 30 Cal.App.5th 358.) Indeed, any inconsistencies between a proposed project and applicable plans must be discussed in an EIR. (14 CCR § 15125(d); *City of Long Beach v. Los Angeles Unif. School Dist.* (2009) 176 Cal. App. 4th 889, 918; *Friends of the Eel River v. Sonoma County Water Agency* (2003) 108 Cal. App. 4th 859, 874 (EIR inadequate when Lead Agency failed to identify relationship of project to relevant local plans).) A Project's inconsistencies with local plans and policies constitute significant impacts under CEQA. (*Endangered Habitats League, Inc. v. County of Orange* (2005) 131 Cal.App.4th 777, 783-4, 32 Cal.Rptr.3d 177; see also, *County of El Dorado v. Dept. of Transp*. (2005) 133 Cal.App.4th 1376 (fact that a project may be consistent with a plan, such as an air plan, does not necessarily mean that it does not have significant impacts).)

In the preceding discussion I established the inconsistency between this proposed project and the current plan for the Waterfront. The EIR must also discuss the following plans:

- Bay Plan policies cited in previous letters protecting parking for existing and future recreational uses;
- Bay Plan policies covering dredging, particularly policy 2, that "the siting and design of the project will result in the **minimal dredging volume** necessary for the project"
- The Water Trail Act, now included in the Public Resources Code, "with the goals of improving access to, within, and around the bay"
- Berkeley Measure L, ORDINANCE NO. 5785-N.S., with the goal of protecting and funding existing parks, requiring a public election to allow any parks to be developed for other purposes, and with a definition that includes this property as public trust, to wit: "Public parks shall be defined as City of Berkeley parks, public school playgrounds or **lands held in trust by a public entity, which have been formally dedicated to permanent recreational use by the City of Berkeley**, and funded for recreational use by City of Berkeley public funds"

The two cited BCDC Bay Plan policies have are legal requirements. In addition, there are several legal requirements that would apply to this proposed project, including:

- Section 404(b) of the Clean Water Act, which establishes policies and guidelines to avoid, minimize, and if necessary mitigate activities that would dredge or fill waters of the bay;
- The Porter-Cologne Act which similarly includes a role in 404(b) determinations and independent authority under Section 401 of the Clean Water Act
- Section 4(f) of the Transportation Act, codified now as Title 409 Section 303(c) that forbids use of parks and recreational areas for transportation facilities "unless there is no prudent and feasible alternative"

These plan and policy inconsistencies are significant impacts that must be analyzed and mitigated under CEQA.

ALTERNATIVES

A central element of CEQA is the consideration of environmentally superior alternatives. The feasibility of alternatives arises at two junctures in the EIR process: "(1) in the assessment of alternatives in the EIR; and (2) during the agency's later consideration of whether to approve the project;" and "different factors come into play at each stage." (*California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 981 (*CNPS*), citing *Mira Mar Mobile Community v. City of Oceanside* (2004) 119 Cal.App.4th 477, 489 (*Mira Mar*).) When selecting alternatives to analyze in an EIR, the standard is whether the alternative is "potentially feasible" and would reduce potentially significant impacts. (*Mira Mar, supra*, 119 Cal.App.4th at 489; Guidelines, § 15126.6(a).) In the second project approval phase, the decision-maker evaluates whether alternatives are actually feasible, and may reject alternatives on grounds of actual infeasibility even though the EIR found them potentially feasible and analyzed them. (*Watsonville Pilots Assn. v. City of Watsonville* (2010) 183 Cal.App.4th 1059, 1087 (*Watsonville*); Guidelines, § 15091(a)(3).)

It is an abuse of discretion for an agency to exclude a potentially feasible alternative that would substantially reduce significant impacts from analysis in the EIR simply because it does not meet all project objectives. (*Habitat & Watershed Caretakers v. City of Santa Cruz* (2013) 213 Cal.App.4th 1277, 1304 (*Caretakers*) ["limited-water alternative could not be eliminated from consideration solely because it would impede to some extent the attainment of the project's objectives"]; *Watsonville, supra*, 183 Cal.App.4th at 1087 [agency's refusal to analyze a reduced development alternative because it failed to meet two of 12 project objectives was legal error].)

Since the inception of this effort, Berkeley and WETA have refused to consider alternative locations and sizes for a ferry terminal that would not present conflicts with recreational use of the filled land or require new dredging and fill. The policies and statutes cited in the previous section require any EIR that would be used by a responsible agency, including the Federal Transit Administration, consider alternatives. The existing filled areas on the north and south sides of the marina basin represent reasonable alternatives that must be discussed in sufficient detail to determine their feasibility. Currently, Hornblower yachts are berthed near the Doubletree Hotel. That site, and a site close to the dry boat storage, which could be used for parking, should be considered as alternatives. Increasing BART capacity or improving access to BART within Berkeley should also be considered.

FEASIBILITY

Feasibility is a term of art that has a slightly different meaning under CEQA and some of the related regulatory standards that the EIR must analyze. For the purposes of this EIR, it is

essential that the criteria used to determine feasibility—of the project, the possible alternatives, and the BCDC standard of maximum feasible public access consistent with the project--be transparent. No such transparency exists at the NOP stage.

CEQA defines "feasible" as capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social and technological factors. (Pub. Res. Code § 21061.1.) The guidelines add "legal" considerations as a fifth factor that must be taken into account when determining whether a mitigation measure or project alternative is feasible. (CEQA Guidelines § 15364.) Neither the statute nor the guidelines provide any substantive insights on how to analyze the economic feasibility of an alternative or measure. The court in *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, 694, upheld an infeasibility finding based on analysis of costs, projected revenues, and investment requirements.

The court in *Burger v. County of Mendocino* (1975) 45 Cal.App.3d 322, identified three criteria that should be evaluated when determining whether a project alternative would be economically feasible: (1) estimated income; (2) estimated expenditures; and (3) estimated profitability. Implicit in the court's finding is the need to conduct a comparative analysis, on the basis of each of these criteria, between the proposed project and project alternatives or the proposed project with and without the recommended mitigation measure to determine whether a particular alternative or measure would render the project economically infeasible.

In *Citizens of Goleta Valley v. Board of Supervisors* (1988) ("*Goleta I*") 197 Cal.App.3d 1167, the court confirmed the use of the criteria identified by the Burger court, added additional criteria. The *Goleta I* court set forth five criteria against which a proposed project and project alternative can be compared. They include the following: (1) total estimated costs; (2) total projected income; (3) total expenses; (4) the change in the per unit cost of a project that results from a project alternative or mitigation measure; and (5) the economic benefits of the project to the community and public at large. In *San Franciscans Upholding the Downtown Plan v. City & Cnty. of San Francisco* (2002) 102 Cal. App. 4th 656, the court applied the standard established in Goleta I to uphold the City's decision that the project alternatives discussed in the EIR were not economically feasible. Specifically, the court found that substantial evidence supported the City's conclusion that the project alternatives discussed in the EIR were infeasible because the additional costs and lost profitability that would result from each of the alternatives were sufficiently severe to render them impractical. (*San Franciscans, supra*, p. 695.)

Cost estimates for the overall project were last presented in 2021 when the initial "feasibility study" was published and cost estimates were prepared that estimated the total project cost at $121.7 million and Berkeley's share at $29 million. The project has been under constant change since then, but the cost implications of those changes have not been presented. To a close observer, it appears that the project has no current source

of funding and feasibility depends entirely on a combination of Federal grants and an increase in the sales tax for Bay area counties, which may be on the November 2026 ballot, further increases in the Bay Bridge toll, funding by Berkeley from the general fund or a bond measure, or some combination of those options. No firm source of funding from Berkeley for either construction or maintenance, or firm budget for those costs, has been identified. The documents that I have seen from WETA's web site only allocate a portion of the capital costs of initial construction and indicate that WETA plans to fund no more than half of the ongoing operational subsidy.

In any conventional sense of the word, a new ferry terminal is not feasible. As a matter of fact, it is not even possible without a massive level of subsidy, which comes mostly from people who will never ride a ferry. The budget proposed for WETA for their May 8, 2025, Board meeting estimates an operational cost of $81 million. The budget anticipates 3,032,823 riders—an 18% increase over the current year, which may be overly optimistic. If that budget is correct, each rider costs $26.70. The only recovery from those who are lucky enough to ride is a fare of $4.70. The performance metrics in the same WETA Board agenda packet acknowledge that fare only account for 22% of the costs. That packet also acknowledges that even more subsidies will be required to establish a Berkeley route. Those crossing the bay under the City's assumption, 915 riders departing Berkeley, is less than 1% of the roughly 116,000 west bound daily crossings of the Bay Bridge.

The EIR must bridge the analytical gap in these uncertainties to be able to reach defendable conclusions about feasibility in the EIR that will provide the necessary information for responsible agencies. I think it is essential that the following questions be answered:

1. How much money has WETA reserved for a Berkeley Ferry Terminal?
2. How has WETA allocated funds from Regional Measure 3 to the various other planned projects, for both capital and annual operational costs? Is there a shortfall in funding for the Berkeley terminal in either capital or operational costs? If so, what is the magnitude of that shortfall?
3. What is the updated total project cost estimate, capital and annual, for the Berkeley terminal if the project goes forward?
4. Have any sources for that funding been identified?
5. What would the economic effect be if ridership is less than anticipated? What agency or agencies would be responsible for the revenue shortfall?

These all relate to the question of alternatives. Given the relatively small ridership of the two small ferry operations that have ceased in the Berkeley marina, it seems possible, and perhaps even likely, that less ridership would materialize. A smaller operation, using existing marina facilities and the entrance channel, should be evaluated as a more feasible and far less risky alternative.

RECREATIONAL IMPACTS

With BCDC policies clearly protecting existing and future recreational users from having access to the marina impeded because ferry riders have usurped recreational parking, a detailed discussion of recreational impacts is required. Stakeholders have long informed the city that a baseline of recreational use for parking lots that might be usurped by ferry riders is required, but the city has failed to collect sufficient data during recreational periods to establish a baseline. In addition to the Bay Plan policies that I have cited, Section 15064(e) of the CEQA guidelines is directly on point. It states that:

> If a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect.

Since over 90% of those currently using the marina report that they rely on driving, and that many of the recreational activities involve transporting equipment that is used to recreate on or near the water, parking is integral to recreational access. My letter dated March 18, 2025, which explains the flaws in the Kittelson report is incorporated into these comments. Because of those flaws, the misuse of statistical data, and the exclusion of relevant data, that report cannot be used to develop an adequate analysis of the recreational impacts. Also incorporated is the e-mail thread wherein I made similar comments.

In addition to the effect of usurping parking, which continues due to passengers on the Genentech ferry, construction of a solid seawall in the Bay will alter the recreational environment for sailors and those using small craft. Such facilities are known to refract and reflect waves and disrupt wind patterns. Those impacts need to be thoroughly evaluated and mitigated. I have provided my GPS track from May 8, 2025, at the end of these comments that shows a typical path back into the marina entrance channel that might be affected by reflection of wind and waves from the proposed terminal and ferries. That impact must be analyzed. A second GPS track of the Pegasus sailing ship is also attached and labeled. The Pegasus takes Berkeley school children out onto the bay for free, fulfilling part of Berkeley's mandate to provide recreational facilities at the marina for those who don't own a boat. I contribute both my time and make donations to support that access.

As noted by members of BCDC's Design Review Board on May 12, 2025, further engineering analysis of the proposed sheet pile breakwater structure must be completed to assure that an accurate footprint of that structure is used for analysis. The structure affords substantially less wave protection than the breakwaters for Berkeley marina. Even those breakwaters required modification; the sheet pile breakwater north of the rubble mound breakwater was added because waves were penetrating the harbor and causing damage. The proposal for locating the ferry terminal outside of the protected marina raises further issues. It would directly occupy a part of the bay used for recreation; my GPS tracks show common paths for return to the marina. A sheet-pile breakwater would reflect both waves

and wind, creating turbulence. It would also refract waves, changing their pattern in proximity to the entrance to the marina. These impacts must be thoroughly evaluated in the EIR.

While the city might argue that recreational impacts and parking are not within the scope of CEQA, that is incorrect. First, to the extent the proposed project conflicts with applicable policies, that is a significant impact under CEQA. As discussed above, the project conflicts with several applicable policies protecting recreational uses and related parking. Second, to the extent that the project's impacts on recreational uses results in environmental impacts, those impacts are within the scope of CEQA. For example, the lack of parking for recreational uses may result in illegal parking, cars circling for parking (resulting in greater vehicle emissions and higher vehicle miles travelled). In *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, the court acknowledged that a project may have significant parking-related impacts requiring analysis in an EIR if there are secondary environmental impacts resulting from the projected parking deficits. Third, to the extent that the Ferry Terminal is economically infeasible, as discussed above, it may contribute to urban blight and urban decay in the area, which is an impact under CEQA. (*Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184.)

GREEN HOUSE GASES

The EIR must address the carbon emissions generated by ferry traffic for two reasons. First, there is no guarantee that electric ferries will be acquired by WETA and used on a Berkeley route; Berkeley does not have the authority to mandate that. Second, the source of electricity for any ferries that are deployed will likely be at least partially derived from sources that generate electricity with fossil fuels. For that reason, the efficiency of the proposed ferries should be presented as BTU's per passenger mile and should be compared to alternative ways to cross the bay—BART, bus, and automobile. (See, Bay Area Air Quality Management District Guidelines for Analysis of Greenhouse Gas Impacts under CEQA, available at: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa-guidelines-2022/ceqa-guidelines-chapter-6-project-climate-impacts_final-pdf.pdf?rev=ce3ba3fe9d39448f9c15bbabd8c36c7f&sc_lang=en).

Berkeley staff have made many presentations claiming that this project would be a zero-emission transportation project. That is not true. Generating the electricity for the ferry would require some level of carbon-based generation, either directly or indirectly. Unless the project includes enough local generation of electricity so that it does not replace other renewable sources, it would increase energy requirements with the same carbon signature as the average for electricity generation in Berkeley. Further, access to the ferry terminal would primarily be by single-occupancy car, and driving to Berkeley marina rather than shorter drives to BART would be likely to increase vehicle mileage and carbon signatures. The EIR must consider all emissions associated with the project, not simply the power source of the proposed ferries.

The EIR must be clear about the commitment to electrification of ferries that would be used if a terminal were ultimately developed. Under the existing MOU between WETA and Berkeley, WETA, not Berkeley is responsible for procuring and operating ferries. On April 11, 2024, Seamus Murphy presented the "Draft Service Vision and Expansion Policy" to the WETA Board. It stated:

> System expansion and enhancement projects will deploy Zero Emission Vessels (ZEV), if **feasible**. (emphasis added)

Berkeley has not prepared a revised cost estimate for the project, which has been changed substantially since the feasibility study. At that time, the total project cost was estimated to be $121.7 million, with ferry vessels estimated to cost $18 million each for a total cost of $36 million. (Feasibility study page 179) Since that time WETA has entered into contracts to purchase two electric ferries for costs of about $38 million each, adding about $40 million to the cost of the project. For the most part, ferries, including the fuel cell ferry now in use, have been funded by grants rather than WETA funds. Obtaining Federal grants for alternative transportation modes may be a difficult challenge during the current administration, and the "take" of park, open space, and areas of the recreational bay triggers Section 4(f) of the Transportation Act. Moreover, an accurate analysis of the air quality and carbon dioxide generation impacts of the proposed ferry system depends on the power plants that would be used to power the vessels. The EIR must be clear about whether Berkeley intends to pursue a ferry terminal if electric ferries turn out to be infeasible. While Berkeley might elect not to participate in the proposed project if WETA does not use electric ferries, it is not clear that Berkeley can require WETA to use electric ferries. In any event, the true carbon signature, including the generation of electricity to charge the batteries of any electric ferries, must be analyzed in the EIR.

ENFORCEABILITY

A public agency may not rely on mitigation measures of uncertain efficacy or feasibility. (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 727 (finding groundwater purchase agreement inadequate mitigation measure because no record evidence existed that replacement water was available).) "Feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors. (14 CCR § 15364.) Mitigation measures must be fully enforceable through permit conditions, agreements or other legally binding instruments. (14 CCR § 15126.4(a)(2); See *Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal. App. 4th 683, 730 (project proponent's agreement to a mitigation by itself is insufficient; mitigation measure must be an enforceable requirement); *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal. App.4th 173, 195-96.)

PARKING

While my March 25, 2025, letter provides a thorough discussion of the inadequacy of the city's approach to establishing a baseline of recreational use that is protected under the Bay Plan, it is important to reiterate a few points. First, the Bay Plan Policies protect not merely the existing recreational uses on the date of the NOP, but historic and future uses. The language provides in Recreational Policy 9:

> Ferry terminals may be allowed in waterfront park priority use areas and marinas and near fishing piers and launching lanes, **provided the development and operations of the ferry facilities do not interfere with current or future park and recreational uses**, and navigational safety can be assured. Terminal configuration and operation should not disrupt continuous shoreline access. **Facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons.** Shared parking arrangements should be provided to minimize the amount of shoreline area needed for parking.

Berkeley has made no attempt to account for future park and recreational uses protected by that policy.

I also want to reiterate the comments made by several members of the Design Review Board that Berkeley needs to provide a baseline, or as they said, map, of current users. Those comments made it clear that the time and location of recreational use, and the availability of parking, were necessary to evaluate the project. I'll repeat here a critical comment from my March letter:

> There are twelve different parking lots in the marina, and probably as many different recreational activities. Correct use of data, if sufficient relevant data were to be collected, would identify which parking lots are underutilized and when. That would be a valuable tool in determining whether ferry passengers could be accommodated without usurping existing recreational activities. The approach used in the Kittelson study improperly combines both different locations and different times. This destroys the statistical value that the data…

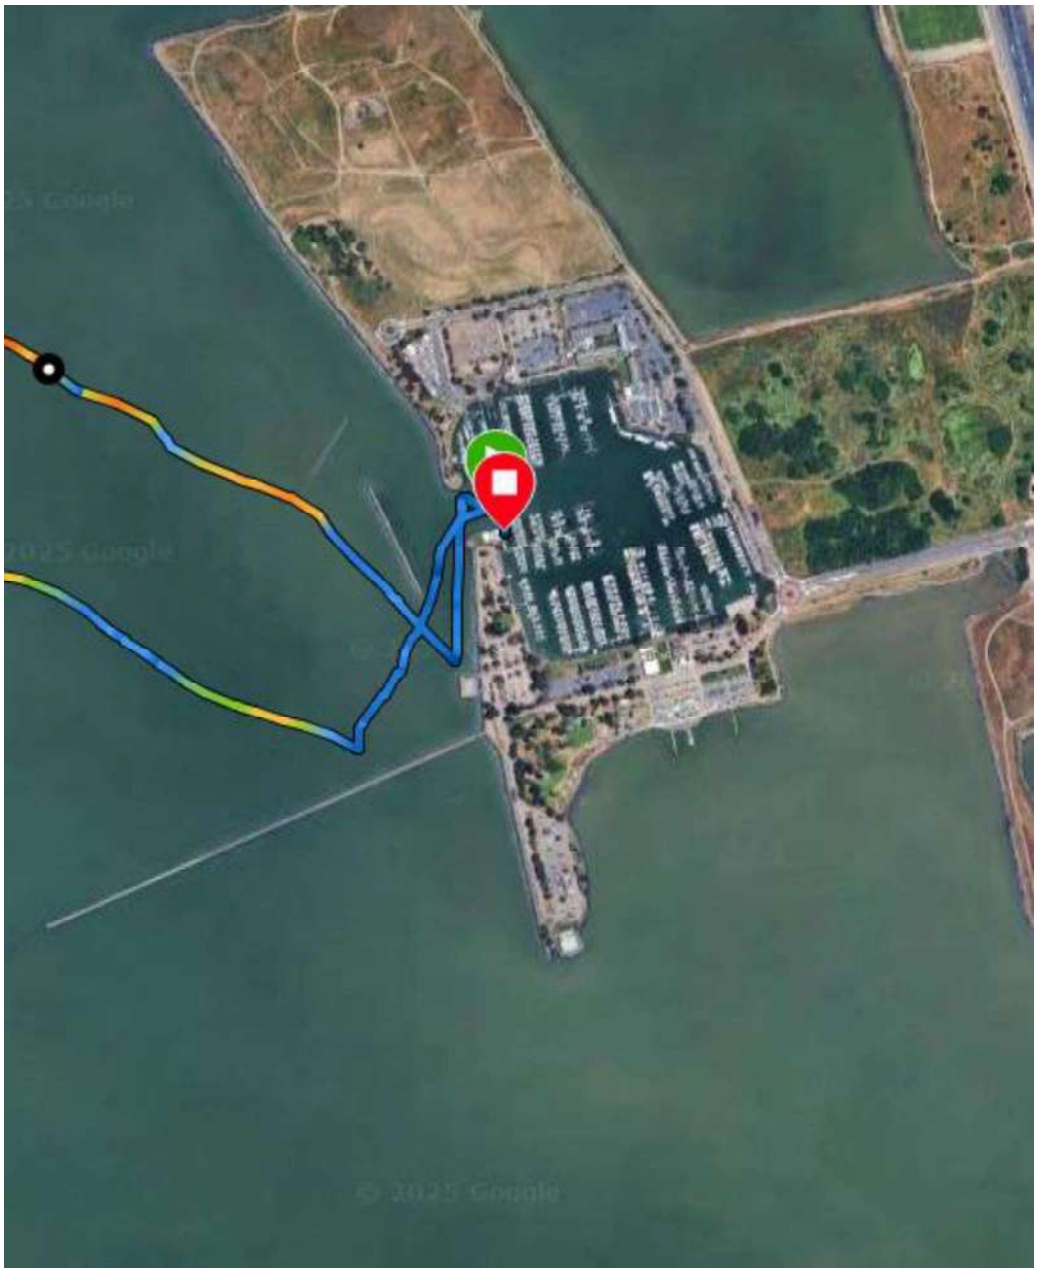
The Kittelson addendum repeats these errors, now claiming that unimproved parking along Marina Boulevard, nearly a half mile from the proposed terminal, would provide adequate parking to prevent usurpation of parking. As noted earlier, unsubstantiated claims do not constitute substantial evidence.

The EIR must establish a level of baseline recreational use, before the city closed the pier, the East dock, and two parking lots. They must account for the geographic location of the users, or map them, as the DRB has directed. The city must spend more than $27,000 for

analysis of the geographic location and time of use of the various recreational activities that are protected and stop trying to repurpose irrelevant parking data that it claims provides the necessary analysis.

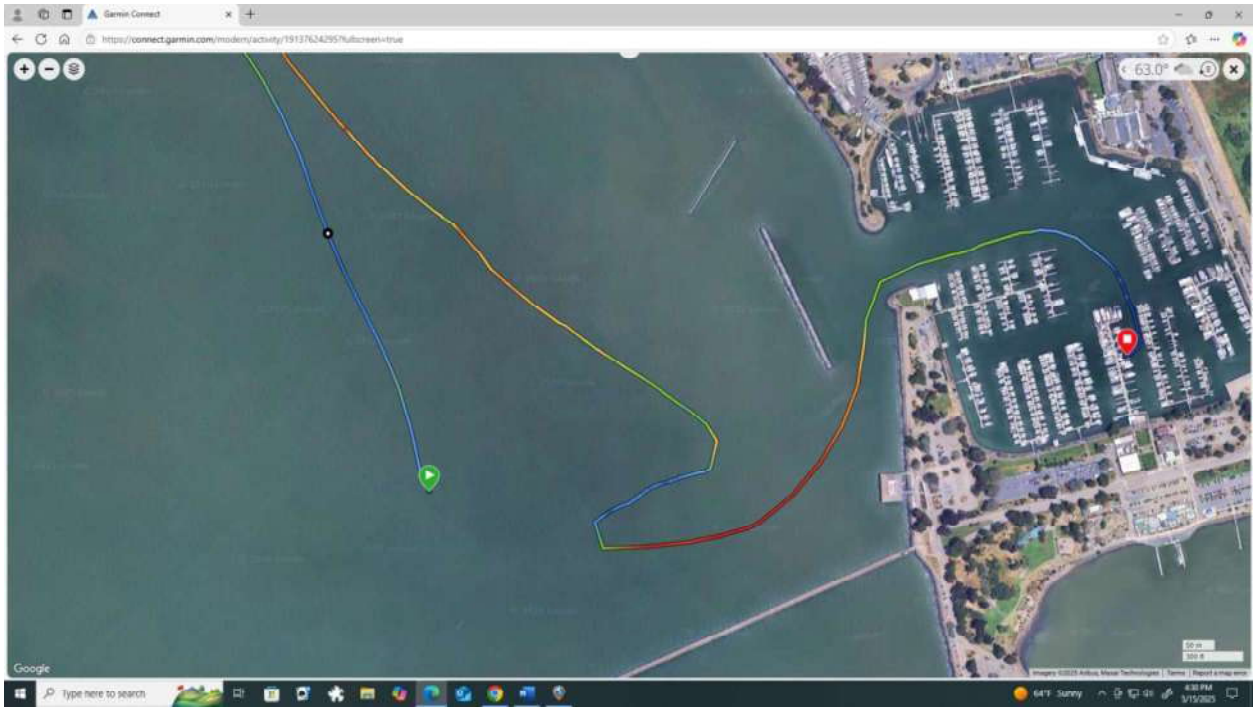
DREDGING

Before the BCDC Design Review Board, Berkeley unveiled a footprint for the turning basin of the proposed terminal, but did not reveal the volume of dredging required, or the amount of new fill that might be required. Both are essential, as is analysis of the Bay Plan and LTMS polices that direct a careful study of alternatives that would minimize both new dredging and fill. I'll repeat that policy here: "the siting and design of the project will result in the **minimal dredging volume** necessary for the project"



The city also claimed that the new terminal would not require maintenance dredging. That is not accurate. There is still ample suspended sediment in the bay to settle in deeper areas, and the construction of breakwaters provides reduced wave energy so that the area behind the breakwater becomes a settling basin for sediment. The city operates Berkeley marina and is engaged in a dredging operation. The before and after bathymetry of the entrance channel and other dredged areas will provide a baseline of sedimentation which can be compared to the time since the area was last dredged. Further, the South Basin of Berkeley marina was dredged as a source of material for construction of the area now proposed for this ferry terminal. Berkeley recently completed a bathymetric study of the area. These two prototypes can be used to establish a rate of sedimentation that can be used to estimate sedimentation associated with the proposed terminal.

Very truly yours,



Jim McGrath

Dear PM McNulty,

I've cced Councilmember Traub as well as Parks, Rec, and Waterfront Commissioners Diehm and Kawczynska (who, at the last Parks etc commission meeting expressed surprise that they would not get to read public comments on this issue).

I write to provide my comments on the proposed Berkeley marina ferry/pier project. I am a 20-year resident of Berkeley District 4, and I have been swimming in the Bay from the Berkeley marina for over five years (and fondly remember using the pier before it was closed). I've done my best to learn about the proposed project, including attending commission meetings when it was presented, the BCDC DRB meeting, and asking (repeatedly, rather aggressively) to be admitted to the focus group meeting held on April 30.

I am concerned that the parking studies are not adequately showing the existing recreational needs (due less than 5% of data points being from peak and weekend counts), nor any estimates of additional recreational needs once the Berkeley waterfront is revitalized (e.g. pier reopened, Bay Trail extended -- see Albany Bulb as an example of how "latent demand" becomes actual demand when a recreational amenity is improved). There are also moving targets as far as ridership numbers. Another issue that concerns me is that all parking spaces in all marina lots are treated as equally relevant, despite distance from use -- ferry riders are unlikely to walk 0.5 mile, and recreational users are unlikely to schlep that distance carrying their kayaks. As a swimmer, I can attest that walking that distance in nothing but a wet swimsuit seems unsafe.

I, along with many other recreational users, fear that the project as proposed will usurp our access to these recreational amenities that were created (per 1966/1967 permit with BCDC) expressly for recreational purposes. The Berkeley shoreline -- an area all have the right to use -- is a favorite spot among a wide range of diverse users, even in its current state of disrepair (pier closed, one of the sailing basin docks closed).

I urge the city to ensure that future parking studies are undertaken to adequately and correctly account for recreational use. I ask also that all recreational users be invited to the table to give input. Hundreds of swimmers use this area and we were not included until April, and only then after aggressive insistence, and even then our #1 concern, parking, was declared off the table for discussion.

Thank you for reading and considering my comments. I am happy to provide additional information at any time.

Best wishes,
Julie Allen

Having attended (online) the meeting last week, I have even more concerns about the ferry project. Primarily, the project's proximity to three major public open spaces—Shorebird Park, Adventure Playground, and McLaughlin Eastshore State Park— requires detailed focus on impacts to recreation and transportation.

Berkeley has done a TERRIBLE job supporting and caring for these valuable open, park spaces. That should be our focus, not a project that will take SO MUCH MONEY and provide very little that cannot be provided by BART and AC Transit (if these existing mass transit options are supported!). We don't need to spend money that Berkeley does not have.

Areas of the Bay that have been filled for recreational purposes must remain in that use and not be converted for commercial development, consistent with provisions of the McAteer-Petris Act and regulations of the San
Francisco Bay Conservation and Development Commission (BCDC).

Save The Bay and its founders (including Sylvia McLaughlin for whom Eastshore State Park is named) supported the placement of fill in the Bay in Berkeley only for **recreational purposes**, as consistent with BCDC's statute.

So many people, swimmers, kayakers, and walkers use these areas. There is no parking for a ferry. And regardless of how many times WETA and the others say it, people who will take the ferry will DRIVE and PARK there; they will not take the bus to the marina. Get real.

I want to swim there, I want to walk there, I want to birdwatch there. Recreation is important. Please stop this land (and water) grab!!!!

May 8, 2025
Dear Liza and Members of the Design Review Board,
I am a recreational open-water swimmer who regularly swims at the Berkeley Marina throughout the year along with a number of others. It is the most joyous thing that I do. I am dismayed to hear that plans for the proposed Ferry Pier project have not invited our voices for our opinions, wisdom and input, given that whatever decisions that are made will directly affect us. I love the Bay and hope to keep the Berkeley Marina, the precious resource that it is, available to those of us who immerse ourselves in it.
Thank you,
Kerrily J. Kitano

No “moving target:” The ferry terminal and service details must be established prior to the EIR process. Specifically, the parking plan. This will have a very large effect on the impacts to recreational access. The most likely parking plan needs to be determined in detail before the EIR will have any meaning.

No incremental approval: The EIR must consider the impacts of “full build-out.” WETA is on record as planning a service that will eventually grow to include 8 departures of 400-passenger boats every weekday morning. Assuming 50% passenger load, that’s 1600 one-way passengers every morning, and at the usual 0.6 cars per passenger, that’s 960 cars. Yet the current parking analysis assumes only 389 parking spaces are needed. This must be reconciled before the EIR can proceed. It should not be necessary to point out that 389 is a much smaller number than 960. WETA needs to show a binding commitment to limit the level of service to that which is considered for the EIR. If the service proves to be popular and ridership and parking demands increase, WETA needs to commit to using the known market elasticity (ferry fare pricing) to limit parking demand to the level considered by the EIR.

Distance to parking: No half-mile walks without some reasonable accommodations (shuttle bus, free e-bikes, etc.) The parking plan assumes Marina Blvd parking area will provide overflow. The nearest Marina Blvd parking spaces (at the south end) are 2400 feet from the pier entrance,

most of the spaces in that parking area are more than a half mile from the pier.

Parking fees: The Marina is seriously considering a $1/hour fee for ALL marina parking. This would increase cost to the passenger by approximately 50% per round trip (assuming about $10 ferry fare each way). Is the ferry still feasible at $1/hour parking fee?

Parking management: The parking pattern for a guest on a sailboat is almost exactly the same as the parking pattern for a ferry passenger: Early departure, all-day parking, return early evening. How can parking management strategies allow recreational boating for guests and crew, but discourage ferry passengers? Remember that berth revenues are about 2/3 of marina fund revenues. It's important not to institute policies that render the Berkeley Marina less desirable for boat owners.

Latent Demand: The parking analysis, for EIR purposes, must take into account unmeasured parking demand created by a new recreational pier, the reopening of Hs. Lordships as a new restaurant, and the reopening of the East Dock in the South Cover. These additional parking demands should be part of the baseline used to assess new impacts of the ferry service.

Alternatives: Substantive alternatives need to be considered in the EIR process. Public input to date was only allowed to consider one location, one ferry operating authority, and one level of service. The only choices available were the shape and configuration of the breakwater (see "deck chairs on the Titanic") – and the configuration chosen was based only on prevailing west-southwest wind and waves with no consideration for southerly storms or northerly gales. The breakwater design needs to be vetted by a coastal engineer willing to put their engineering license stamp on the calculations. Costs will go up. Alternatives need to include alternate locations, e.g. inside the Berkeley Marina (using part of the current Hornblower docks), foot of Gilman street, the now-closed racetrack in Berkeley and Albany, Emeryville Marina, etc. Also alternative levels of service. Could the ferry be viable with only four departures every weekday morning, at, say, 150 passengers per departure? (as currently on order) Does the pricing have to be so highly subsidized, as per the current 22% farebox recovery? Perhaps a "boutique" ferry that requires much less

subsidy and serves fewer passengers would be a fetter fit for the Berkeley waterfront.

BCDC constraints: The landfill intended for ferry parking was done under a BCDC license that dedicates the fill for recreational purpose, and a project that usurps spaces intended for recreational activities is not allowed under the permit. City staff seem to believe that Hs. Lordships restaurant, not strictly a recreational facility, shows that this is not a strict requirement. However the land is also subject to the California Land Trust restrictions of 1913 (as amended in 1962) and these documents specifically call out restaurants, golf courses and even airports (I landed at the marina in a helicopter from SFO ’73) as allowable uses. The land grant trust does NOT include parking for a transit hub or a ferry terminal.

Measure L: Berkeley’s measure L creates a statutory requirement that any significant development on the waterfront is subject to a city-wide referendum. If a marina-wide parking fee is a necessary part of the ferry project, this needs to be clear in the wording of the ballot measure.

Economic feasibility: The Marina Fund is underwater. The City is facing a large budget deficit, as is the State. Federal help seems unlikely in the current climate. WETA does not have the funds to run the Berkeley service, as proposed, without additional outside funding. The source and amount need to be identified in the EIR to determine feasibility. If the project collapses due to financial infeasibility, then the benefits that might possibly justify some level of environmental, social and economic impacts will disappear. A binding update to the MOU between WETA and the City, stipulating up-front and ongoing costs to the City, is necessary for the EIR to assess viability.

Compliance with existing plan: The Waterfront Specific Plan (WSP) revision is incomplete. The current plan does not provide for a ferry terminal. The plan needs to be updated before the EIR can assess compliance.

Equity? From the meeting packet for the May WETA Board meeting, WETA transports 2,595100 one-way passengers per year. Operating costs are budgeted at $74,748,838 per year. “Repair and replacement” (not including capitalization for new routes and additions to the fleet) add another $26,057,363 per years. Do the math. The PUBLIC cost of each

one-way ferry ride is $38.84. For a round trip commute, assuming the fare is $10 each way, this is like giving each commuter a check for $57.68 every day. Surveys suggest that about 90% of ferry commuters earn above median East Bay income. This is not equity. If we have that kind of money to throw at transportation, let's give more buss passes to high school students (for example).

Is the project being honestly represented to the public?

The title of “Pier-Ferry Project” implies that reconstructing 500 feet of recreational pier is a major goal of the project, with something approaching parity in terms of the project’s priorities.

After extensive analysis, the City’s parking consultants determined that 389 parking spaces for ferry passengers will be required, and goes to some lengths to explain how these additional parked cars will not significantly affect recreational access to the waterfront. How many parking spaces will be required to serve recreational pier visitors? ZERO, according to the Kittelson parking studies. See the problem here?

Also, the “E” for “Emergency” reduces the credibility of the WETA meme, especially when considered along with electrification. A true emergency ferry system would use vehicle-carrying ferries, capable of transporting

ambulances and fire trucks across the Bay. This could save lives in the first few hours after a disaster event. Passenger-only ferries address the inconvenience of being stuck on the wrong side of the Bay, but do little to protect life and limb.

True emergency ferries need to be agile and versatile enough to load emergency vehicles from any accessible boat ramp – we don't know which terminals or ramps will be cut off due to liquefaction or downed infrastructure.

And finally, electric ferries for emergencies? The shore power grid is likely to be interrupted, and electric ferries need to recharge during dwell time at the terminals. The work-around is fixed diesel-generators and batteries at the terminals, but that essentially doubles the cost of the prime movers.

From Agenda Item 9, Weta Board meeting: December 9, 2021: "…an all-electric ferry fleet may be cited as a milestone for incentivizing a community to come out and support the development of a new ferry terminal."

Without an enforceable statutory requirement for electric ferries on new routes, this reads like a disingenuous bait-and-switch promise designed to calm the opposition.

The scope of the EIR needs to include a rigorous review of WETA's actual commitment to electrification at scale. The EIR also needs to evaluate the efficacy of the ferry system in response to a major earthquake, fire, or widespread infrastructure failure. Would it be more honest to drop the "E?"

Subject: BWTPF EIR scoping comments

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hello Liza,

San Francisco Bay is one of the best open water swimming locations in the world and the Berkeley Marina is a very popular location to enjoy this sport. I want to encourage the City of Berkeley to keep the needs of open water swimmers in mind when reviewing the plan to bring a Ferry to the Berkeley pier area.

I have been swimming in the bay for over 10 years, and many others for longer than that. I've seen the sport grow in popularity here over the years, and it is a sport that is growing worldwide. The Seine river in Paris recently opened to open water swimming to help meet this demand.

San Francisco Bay is an especially good venue for open water swimming, as it has swimmable weather and water temperatures year round. People use SF bay to train for swimming the English Channel and other challenging swims. And the cove to the right of Hs Lordship's is unique in the east bay as it has sufficient water depth to swim even at the lowest tides. Swimmers value this location, and it is sometimes their only option when the tide is too low to swim at Crown Beach, Albany Beach, Keller Beach or the Berkeley Sailing Basin.

Open water swimmers do not need a lot of resources. We need a place to park, a place to safely enter and exit the water, and a swim area relatively free of fast watercraft. And although not strictly needed, a shower to rinse off after is nice.

Could the City of Berkeley please consider the needs of open water swimmers when reviewing this project?
1) Please ensure we have space to park our cars. We commonly park for 1-2 hours at a time, but we swim in groups for safety. We might use a few to a dozen or so spaces at any one time. Groups go out at different times during the day, some before work at first light, some after work when there is light, some at lunch hour, and some in between. We currently share this parking with fishermen, kayakers, dog walkers, picnickers and people just enjoying the view from their cars. If these spaces are all taken by commuters, it will eliminate this spot as a viable swim location. Could you ensure that there are spaces with an appropriate time limit to accommodate the existing and projected users, to preserve this area for us swimmers and other recreational users?
2) Please ensure that there is open water set aside for swimmers (the bay is huge, we are small). We don't mind sharing with kayakers and small sailboats, but ferries and fast moving craft are a real danger for us. We commonly swim out to the break in the pier and back from Hs Lordships, but we can adjust that if a Ferry needs some of that water, too. Maybe some buoys could separate a swim zone from a ferry zone?
3) Please ensure we have a safe spot to enter and exit the water. A beach is the best, but a protected gravel path to below the low tide point as exists at Hs Lordships works. A dock with a ladder also works if it is not crowded with fishermen and their fish hooks.
4) And as long as improvements are being considered, could we get a shower to rinse off?

Thank you,

Paul Young

Re: Scope of Environmental Impact Report (EIR) for the Berkeley Water Transportation Pier Ferry

Dear Ms. McNulty and staff of the San Francisco Bay Area Water Emergency Transportation Authority (WETA):

This comment addresses environmental impacts involving "Hazards and Hazardous Materials" that the Environmental Impact Report (EIR) for the Berkeley Water Transportation Pier Ferry must address. I write as a long-time resident of Berkeley and general supporter of the ferry system, not representing any group.

The project creates hazard well beyond simple negligence, because all traffic in or out must thread through a single, narrow, half-mile bottleneck, with no alternative or emergency route. This could trap large numbers of people. It also could cut off a substantial portion of Berkeley's police vehicle fleet, crippling emergency responses.

The project as out lined is expected to draw large and increasing numbers of people and vehicles, at earlier and later hours than now, to a peninsula

- Jutting a half mile into the Bay
- Built of unconsolidated fill supported by rip-rap
- Subject to well documented tsunami and earthquake hazard
- In the face of sea-level rise reasonably likely to reach 5' by 2100 (the standard the East Bay Regional Park District is using for the North Basin Strip and Virginia Extension just north).
- with **only one exit or access route: low-lying University Avenue**.

This is reckless. **The project could easily work against its stated objective "Provide options for emergency response and transportation services in case of an emergency**, such as natural or human-caused event that disables roads, other transit, bridges, and/or tunnels." Significant numbers of people in new hotels, restaurants, and other commercial activities envisioned, as well as ferry users and those using the area's parks now, could easily be trapped, injured, or killed. The ferry, too small for crowds or emergency vehicles, could not help them.

This danger must be considered in terms of both immediate impacts of the pier and ferry and cumulative impacts of the City of Berkeley's Waterfront Specific Plan (WSP). The WSP envisions commercial redevelopment of the Marina area with multiple hotels and restaurants. It was begun in conjunction with the ferry/pier plan and is being prepared in tandem, with approval hoped for in 2026. The WSP relies on the ferry as a draw -- Meetings and presentations made clear

that the existing hotel struggles due to distance from other Berkeley centers of interest; the ferry may attract San Francisco visitors looking for lower-cost accommodation. **Bringing significantly more people to this vulnerable spot at late hours and overnight will make escape more confusing and difficult.** .

University Avenue now backs up and moves at a crawl when public events draw heavy traffic. In an earthquake, tsunami warning (such as recently occurred), or actual tsunami, drivers trying to escape would likely cross the medians into oncoming lanes, blocking emergency vehicles. **An earthquake that ruptures pavement or creates a sink, or a single stall or wreck, could compound disaster. Since much of Berkeley's police fleet is kept at the Marina, it might not be able to get out or even by reached.**

As sea-level rise and climate change continue, risk will increase. **The strip of land south of University is eroding rapidly in several areas**. Wind and storm already wash large logs and wrack to the base of the low rise to the Bay Trail spur and University Avenue (see photo below and link above). Large, windy, rainy storms are increasing due to climate change. The resulting high tides and effective sea-level rise, often called storm surge, will in the foreseeable future wash spray or even waves onto trail and road.

Above¿Debris.washed.close.to.Bay.Trail.spur.south.of.University.by.December.8680.storm¡.Logs.washed.close.to.the.trail.from.storms.in.previous.years.remain¡

Alternative emergency routes, as well as the shoreline strip south of University Avenue's right of way, are part of McLaughlin Eastshore State Park. **The City of Berkeley is in early stages of discussing alternative emergency access routes with the East Bay Regional Parks District**, which administers the park.

The most obvious alternative access is the old Virginia Extension dump road, edging a steep drop to the Bay. This road already floods at normal high tides. Growing erosion notches its edge, and boulders that armor the steep slope have visibly moved downhill (see photos below and the linked

slide show). The Park District has also envisioned an inland route through the habitat area known as the Meadow. Given present fiscal realities, complex and time-consuming permitting, and absence of engineering studies, **this current EIR, and the ferry project, cannot rely on promised coordination with other agencies.**

Above¿Gouges.and.erosion.along.Virginia.Extension

This EIR and project should not proceed without:

- Unqualified, documented assurance from its Fire Department, other staff, and respected regional and state experts that no alternative entry and exit is needed, or
- **Clear, fully permitted plans for such a route, financed as part of the project and scheduled for simultaneous or earlier construction as part of the project.**

I look forward to seeing these matters adequately addressed in the Environmental Impact Report. Please acknowledge receipt of this comment.

Sincerely,

Susan Schwartz

Here are my comments for the EIR for the proposed Ferry/Pier project 2025

RE: PROJECT OBJECTIVES:

Enhance public access and recreational opportunities at the Berkeley Waterfront

that:

--Develop or enhance public pier facilities at the City of Berkeley Waterfront.

There has been at least one alternate cost study for repairing the pier by Paul Kamen I believe, a forensic analyst in exactly this field. He actually advocates for a ferry, but has shown that repair of the pier can be done for much less money than currently envisioned. His analysis and others need to be fleshed out in minute detail.

Too much private development – such as of “food courts” “food trucks” and the like need to adequately consider the effects and cost of increased garbage – also in detail. Also, again, the idea of such over next to Cesar Chavez Park for example is taken as almost a death knell by some of us who so value the near-wilderness sense of this open space. **And this Cesar Chavez area SHOULD be part of the scope of this ferry project, as increasing population at the bay will also push more users to the relatively undeveloped Cesar Chavez Park.** Please don't destroy the experience of those of us whose lives rely on quiet peaceful enjoyment here. The wind is such that money could be poured into concrete, mowing, and other destroying forces only to find that those who love and value the place will find it gone, and others won't use it because it's too harsh for their tastes. This must be adequately considered.

If trails in the Marina along the pier-ferry (Seawall Drive) portion are envisioned, they need to respect the simple fishing recreation and others who enjoy walking on the rather wild-kept shore there or parking to enjoy the water's regenerating properties. A concrete plaza as envisioned eliminates that and condemns current users to grief. (And contributes to global warming BTW).

--Provide sufficient public access and recreational opportunities at the

Berkeley Waterfront that meet regional needs, consistent with BCDC Bay

Plan Policies maximizing access to the Bay.

This objective is a big concern for me, and I fear the traffic studies done so far do not adequately address scoping needs. As others have said * the parking studies done so far do not seem to adequately assess either the current parking needs or future ones. I read the critique referenced below in detail, and looked at the weather for the days surveyed. The days and times are not representative, even with added survey days. I do know this, as I use the Marina often. As you know, Berkeley's task is to protect recreational use at the bay. I won't detail here all the legislated requirements for this (see notes at end for reference). But I will emphasize that with and even without the increasing population Berkeley is encouraging, folks need cool fresh air and something like an open horizon and seascape for mental, emotional, and physical regeneration. Even now some find it very difficult – even in the relatively mild climate of Berkeley – to escape the heat at times, which will increase in the future. Socially as well, a community works better together when its members have adequate respite from city life. To repeat: this is established in written policy and agreements* but even were it not, it should be. A community works best as a community with needed recreational relief and open space. This has long been recognized. This is the Parks department so I guess you understand that.

The parking and envisioned-by-some development for bringing money to the city needs to not undo the solid need for maintaining a healthy community with access to this bay.

--Minimize environmental impacts by considering existing infrastructure and

sea level rise projections.

Yes, see my comments above as well as report references at the end of this!

--Encourage the use of public transit, bicycle, and other forms of active

transportation and sustainable travel to access the site

Yes but this needs to consider that many disabled people used the Marina – I think if you did a survey or simply walked there on many late afternoons you would be astounded to find that this is the case even now with the crumbling trail – because those of us who are disabled need the relief and physical strengthening this place provides, even with needed care where we step. We don't want concrete under human knees and joints (finally repaving with softer asphalt is just fine – but crushed granite is too slippery as well).

If public transit is envisioned, you need to ask disabled people what it would take for them to use it. Right now, hours are irregular; seats are sometimes not supportive. Some type of shared on-demand shuttle is something I think could work for different neighborhoods if planned carefully. This needs to be intricately thought through if you're serious about it in the scoping of this.

Dog walkers? They're going to take their own vehicles. One proposal I've seen asks small businesses to pay a small yearly fee. $25 a year is too small! Professional dog-walkers are small businesses and perhaps should pay something for their use of the bay –more than $25 a year.

Bicycles do not belong on pedestrian paths in much of the pedestrian-oriented peace of the Marina, unless those vehicle-users are unable to walk. A place (or specified hours/days) for cyclists should be considered separate from walkers, some of whom do fear being knocked into by some of these vehicles.

NOTES

I am including a link to a critique of [part of the] parking study done as part of this scoping. I understand that a few extra days/hours may have been added to the parking survey since Mr. McGrath wrote this. However, as I understand the presentation you made to the Parks Commission May 14, 2025 – no surveys were done for the hours of 5-7 pm. I often use the Marina during those hours, and note that Marina Drive is often full or almost full during those hours. I hope you received this from Mr. McGrath himself. I really appreciate his careful attention to details, most of which I support completely and can't say it better, so please read his letter. I know he sent it to Scott Ferris. I found it on the internet here:

https://chavezpark.org/wp-content/uploads/2025/03/Jim-McGrath-on-parking-Additions-to-comments.pdf

Related and separate to the above note: We now hear that the Doubletree Hotel, one of if not the biggest revenue source for the Marina, is close to foreclosure and not paying its agreed amount to Berkeley. Parks Director Scott Ferris made the statement that hotels all over the bay area are suffering, and he even said something to the effect that people aren't wanting to come to the bay area – or so it sounded like to me. I have a recording of that. Yet only recently the same people now proposing this ferry/pier project were asking us to envision more hotel rooms or another hotel! I believe their vision for "food courts" and "food trucks" are equally short-sighted. I understand Berkeley needs money, but it can't be at the expense of the health of its community members! Please consider this honestly and fully.

ALSO, MONEYMAKING IDEA:, The Doubletree DOES have the potential for a lovely restaurant with a view of the bay right now. However, at $30 for parking, I assume many choose to park along Marina Boulevard while the hotel parking lot is mostly empty. Can some jiggling around be done about this? **One reason more people DON'T love the restaurant at this hotel (other than the unnecessarily loud overhead music) is that very large boats are now allowed to park right in front of the restaurnt window and block view of the bay. If Berkeley needs money, how about making a different arrangement for docking those large tour boats? I understand Berkeley in fact paid money for the pier at which they're docked! A mistake, unless that pier can be used instead for some sensible-sized boats and the eyesore tour boats moved farther west in the bay.**

That's it and attached!

00:01:34.000 --> 00:01:53.000

The one thing I wanted to mention is the next upcoming public meeting, just so you have it on your calendars, next Wednesday May 14th, we'll be giving a very brief presentation at the Parks, Recreation and Waterfront Commission meeting that is a follow up to a previous

00:01:53.000 --> 00:02:09.000

Not brief presentation we gave about parking and transportation demand management. There were some questions at the presentation that we gave in March, and we're going to just do a very quick presentation to provide some answers to those questions. And so again, that's next Wednesday in person.

00:02:09.000 --> 00:02:18.000

At Francis Albrier Community Center in Berkeley at 7 p.m. With that, I will turn it over to Leo.

00:02:18.000 --> 00:02:22.000

Thanks, Liza. Leslie, can you advance to the next slide, please?

00:02:22.000 --> 00:02:28.000

So here's our agenda for tonight. We're just going to begin with some brief introductions so you know.

00:02:28.000 --> 00:02:34.000

Who is in the room, as well as go over what the purpose of this meeting is tonight.

00:02:34.000 --> 00:02:41.000

I'll then go over an overview of the project location and provide an overview of the project description.

00:02:41.000 --> 00:02:49.000

Then I'll give a little bit more of an overview on the CEQA process and what that is, the California Environmental Quality Act.

00:02:49.000 --> 00:02:59.000

That's going to be followed with the topics that we will be considering in our EIR, our environmental impact report, and the overall structure of that document.

00:02:59.000 --> 00:03:04.000

We're going to end it with just an overview of how to submit these public scoping comments.

00:03:04.000 --> 00:03:11.000

And then we will take the scoping comments from you, from the public. So next slide, please.

00:03:11.000 --> 00:03:27.000

So just who's in the room. So Liza McNulty is the overall program manager, project manager with the city for this project Parks, recreation, and waterfront Department. And then we have Roger Miller, who's assisting with this as a senior management analyst.

00:03:27.000 --> 00:03:33.000

We have Kelsey Bennett, who is the director for CEQA with RingCon Consultants.

00:03:33.000 --> 00:03:45.000

Myself, who is managing the overall CEQA preparation of the EIR, And Leslie Slade, who's assisting So we're really, really excited to be with everyone today.

00:03:45.000 --> 00:04:10.000

So next slide, please, Leslie. So the overall meeting purpose really is to hear from you, hear from the public. We want to receive public input and comments, and we're really hoping to get input on the following, which is the scope of the environmental impact report. So we want to know what's the content of the environmental analyses for the proposed project that you would like us

00:04:10.000 --> 00:04:16.000

To analyze. What are the environmental topic areas of concern that you want to make sure gets considered in the environmental impact report?

00:04:16.000 --> 00:04:22.000

What are your specific environmental issues of concern so that we know that to address those.

00:04:22.000 --> 00:04:33.000

If you have any potential alternatives to the project, we would love to hear those so that we can consider those. And then finally, if you also know of any mitigation measures that you want us to consider.

00:04:33.000 --> 00:04:35.000

As we prepare the document, we would love to hear that as well.

00:04:35.000 --> 00:04:46.000

So next slide, please. So overall, the location, the project is located at the Berkeley waterfront along the San Francisco Bay.

00:04:46.000 --> 00:04:51.000

So the total size is 119 acres, and I'll go into detail on the next slide.

00:04:51.000 --> 00:05:00.000

What that entails. The current existing use is a pier that has been closed since 2015. I know many, many people here are familiar with it.

00:05:00.000 --> 00:05:06.000

There's parking lots. Roadways and of course, Shorebird Park.

00:05:06.000 --> 00:05:11.000

So the land use designation is waterfront marina and it has an unclassified zoning.

00:05:11.000 --> 00:05:25.000

So overall, where the project is going to take place, it's going to include The closed Berkeley Pier, including that entry area for the Berkeley Pier. The San Francisco Bay waters around the closed pier.

00:05:25.000 --> 00:05:37.000

The parking lot off Seawall Drive and then two roadways, University Avenue and Seawall Drive, as well as the adjacent vegetated street islands that are adjacent to University Avenue and Seawall Drive.

00:05:37.000 --> 00:05:42.000

So next slide, I'll go into a little bit more detail about the project details.

00:05:42.000 --> 00:05:47.000

So on the right, you can see an overview of the plans.

00:05:47.000 --> 00:05:53.000

So the project is going to include first demolition of portions of the closed pier.

00:05:53.000 --> 00:05:59.000

So you can see that. That you can see that on the left side of the figure.

00:05:59.000 --> 00:06:13.000

And then in that place, we're going to construct a new approximately 1,080 foot long public pier at that same location. And that's going to provide both pedestrian access and recreational amenities.

00:06:13.000 --> 00:06:27.000

On that pier as well, there's going to be a new approximately 400 foot long breakwater that's going to be perpendicular and connected to the new peer. And that's also going to be accessible for pedestrians and provide recreational amenities. In the figure you can see

00:06:27.000 --> 00:06:38.000

The curve, what's known as the sword design. So some of the recreational amenities on the pier are going to include interpretive and educational signs.

00:06:38.000 --> 00:06:44.000

Benches, a shade canopy. Seating and a fish cleaning station.

00:06:44.000 --> 00:07:02.000

The project also is going to include the ferry infrastructure, including the universal charging, the boarding floats, the landings, the gangways, the security entrances. Essentially everything that will allow people to access The ferry from the pier.

00:07:02.000 --> 00:07:13.000

So there's also an existing 100 foot wide US Army Corps of Engineers Federal Navigation Channel that parallels the close pier, and that will be dredged.

00:07:13.000 --> 00:07:22.000

To allow for ferries to access the site. There'll be also a new public plaza with amenities such as a new public restroom.

00:07:22.000 --> 00:07:32.000

Benches and bicycle parking. And then there's also going to be improvements along University Avenue, including repaving and restriping of it.

00:07:32.000 --> 00:07:47.000

Between Seawall Drive and the intersection with Marina Boulevard. And there's also going to be a new raised bicycle track passenger drop-off zone and then improvements to the public bus infrastructure. So there's more on the next slide.

00:07:47.000 --> 00:07:53.000

There's also going to be improvements to seawall Drive, including the realignment, repaving, and restriping.

00:07:53.000 --> 00:08:02.000

There's going to be a development of the portion of a portion of the planned bay trail extension just south of the pier along Seawall Drive.

00:08:02.000 --> 00:08:10.000

The seawall drive parking lot itself is going to be renovated with new pavement, surfacing, striping, lighting, and stormwater treatment.

00:08:10.000 --> 00:08:15.000

There's going to be new landscaping as well as tree removal and tree replacement.

00:08:15.000 --> 00:08:25.000

There's going to be new wayfinding signage and replacement lighting. There's going to be new utility connections such as electric infrastructure to charge the ferry vessels.

00:08:25.000 --> 00:08:32.000

New water connections for the restroom and for hose bibs. And then new wastewater connections for the restroom.

00:08:32.000 --> 00:08:39.000

And then, of course, there's also going to be the operation of a new zero emission electric passenger ferry service.

00:08:39.000 --> 00:08:43.000

That will connect the Berkeley Ferry Terminal with San Francisco and with Larkspur.

00:08:43.000 --> 00:08:52.000

So next slide, please. So in addition, there's a couple of improvements that the city is currently considering.

00:08:52.000 --> 00:09:03.000

The first is solar panels in the renovated parking lot. So the city is really just looking into the feasibility and practicability of implementing this. So that is something that's under consideration.

00:09:03.000 --> 00:09:13.000

In addition, a recreational water access to the bay. Again, the city is considering the feasibility and practicability of that.

00:09:13.000 --> 00:09:19.000

And then finally, some recreational improvements to Shorebird Park. So the city is considering that as well.

00:09:19.000 --> 00:09:24.000

So next slide. So just an overview of the California Environmental Quality Act.

00:09:24.000 --> 00:09:33.000

The city of Berkeley is the lead agency under CEQA, and then WIDA or SF Bay Ferry is the responsible agency under CEQA.

00:09:33.000 --> 00:09:39.000

So what's the purpose of CEQA? The overall purpose is really as a public disclosure and input process.

00:09:39.000 --> 00:09:48.000

And it's really so that the public can provide their input and the city can provide disclosure on the environmental impacts of a proposed project.

00:09:48.000 --> 00:09:56.000

It's also to minimize, reduce, or avoid environmental impacts. And by doing so, implement identified mitigation measures.

00:09:56.000 --> 00:10:05.000

So this is an environmental impact report that is being prepared and it's being prepared at a project level analysis as opposed to like a program level.

00:10:05.000 --> 00:10:10.000

So next slide, please. So this is the overall SQL process.

00:10:10.000 --> 00:10:21.000

So the SQL process begins with the city publishing a notice of preparation and taking EIR scoping comments. So this is where we currently are in the process.

00:10:21.000 --> 00:10:27.000

So the city is going to solicit comments from agencies and public on the content of the draft EIR.

00:10:27.000 --> 00:10:35.000

And so that will be happening until May 19th. And tonight we are taking some of those scoping comments tonight.

00:10:35.000 --> 00:10:45.000

So once the city has those scoping comments, they will prepare the draft EIR And they will consider those scoping comments as they prepare the draft EIR.

00:10:45.000 --> 00:10:52.000

So once a draft EIR is ready, there'll be a second opportunity for the public input process.

00:10:52.000 --> 00:11:07.000

So the city will publish the draft EIR and then there will be a 45 public public 45-day public review period in which the city will be soliciting comments from public agencies and the public on the analysis and the information in the draft EIR.

00:11:07.000 --> 00:11:21.000

So once those comments are received and once that comment period closes, the city will prepare what's called the final EIR, which will include responses to the comments that were provided, and if necessary, revisions to the drafty.

00:11:21.000 --> 00:11:27.000

So once the city publishes that final EIR with all those response to comments, then the city will make a decision.

00:11:27.000 --> 00:11:31.000

On whether to certify the EIR and whether to approve the project.

00:11:31.000 --> 00:11:42.000

So in addition, another part of this will be that the responsible agency, in this case WIDA or SF Bay Ferry, will also consider the final EIR, whether to certify it.

00:11:42.000 --> 00:11:53.000

So next slide, please. So these are all the topics that we will be covering in our EIR. So some of them are more relevant than others. So the first one.

00:11:53.000 --> 00:12:03.000

Agricultural and forestry resources. We will take a look at it, but there aren't really any agricultural sites out here. We'll also be considering biological resources, cultural resources.

00:12:03.000 --> 00:12:12.000

Geology and soils, energy. Wildfire, public services, transportation land use and planning, hydrology and water quality.

00:12:12.000 --> 00:12:21.000

Hazards and hazardous materials, tribal cultural resources. Population and housing, aesthetics or visual resources, recreation.

00:12:21.000 --> 00:12:33.000

Noise, air quality, mineral resources. Greenhouse gas emissions, utilities, and service systems. So we really want to hear from you about these these topics tonight.

00:12:33.000 --> 00:12:38.000

So this is the overall structure of the EIR just so that you can get an idea of what it's going to include.

00:12:38.000 --> 00:12:47.000

So we'll have an executive summary that kind of overall summarizes what the impacts are, what the mitigation measures are, what the project is.

00:12:47.000 --> 00:13:04.000

We'll also have an introduction that kind of provides an overview of the of the background of the project, as well as how the scoping comments are addressed where in the environmental document.

00:13:04.000 --> 00:13:15.000

The scoping comments that we're getting are addressed. That's followed by a detailed project description that provides an overview of all the details of the project that are being proposed.

00:13:15.000 --> 00:13:32.000

And then we have the environmental impact analysis, which is really kind of the meat of this document. And each environmental impact section is going to have a setting, an environmental setting that kind of identifies What are the resources out there? Followed by a regulatory framework that identifies what are the existing laws

00:13:32.000 --> 00:13:44.000

That govern that specific resource. Then we have identify the specific Appendix G significance criteria. So that's something that comes out of the CEQA guidelines.

00:13:44.000 --> 00:13:53.000

With their specific questions that we'll answer. That'll be followed by an approach to analysis where we kind of provide our overall methodology.

00:13:53.000 --> 00:14:02.000

The specific thresholds of significance as well, which identify what the level is for an impact to rise to a significant level.

00:14:02.000 --> 00:14:22.000

And then we'll disclose the project level impacts and identify any mitigation measures needed to reduce impacts And then we will also consider cumulative impacts, which are those impacts related to if there are multiple projects nearby, if they can all add up to a significant impact. So we'll be considering that.

00:14:22.000 --> 00:14:36.000

And then finally, we'll have an alternatives analysis where we will consider potentially feasible alternatives that meet most of the project objectives and reduce significant environmental impacts.

00:14:36.000 --> 00:14:44.000

So next slide. Okay, so this is how to submit EIR public scoping comments. You have until May 19th.

00:14:44.000 --> 00:15:06.000

Until 5 p.m. To provide your scoping comments. And you can provide them via mail to the city of Berkeley Parks, Recreation and Waterfront Department. Attention, Liza McNulty, PE project manager 2180 Milvia Street, 3rd Floor, Berkeley, California, 94704. We'll return to this slide so that you guys can write it down if you need to.

00:15:06.000 --> 00:15:13.000

Or you can send them via email at l McNulty, which is LMCN U L T Y.

00:15:13.000 --> 00:15:23.000

At berkeleyca.gov. And please use the subject line BWTPF EIR scoping comments so that we can make sure that we identify those as scoping comments.

00:15:23.000 --> 00:15:38.000

Okay, next slide. So this ends the presentation and now is the time to hear from you, from the public and get your public scoping comments. So please use the raised hand feature to provide your comments.

00:15:38.000 --> 00:15:51.000

And we're here to hear them and to really take that in Or when we start preparing the environmental impact report to make sure that those get addressed in our analysis.

00:15:51.000 --> 00:16:09.000

So I am going to wait until we see a raised hand and then and then we'll kind of get going.

00:16:09.000 --> 00:16:14.000

Okay. I see. Tony has raised their hand.

00:16:14.000 --> 00:16:18.000

Roger, can you please unmute Tony? Oh, there you are. Yes, I can hear you.

00:16:18.000 --> 00:16:36.000

I believe I am unmuted, correct? I'm very interested in the parking impacts And whether or not there will be enough parking left at the waterfront For recreational use.

00:16:36.000 --> 00:16:44.000

So the waterfront is the waterfront is accessible by public transit. I think it's the 51.

00:16:44.000 --> 00:16:50.000

But most people drive to the waterfront and it's a very valuable asset for people.

00:16:50.000 --> 00:17:08.000

And they like to go sailing and water Surfing and walking their dogs And a whole variety of recreational activities. So that's, I think, uppermost in my mind.

00:17:08.000 --> 00:17:18.000

Is whether or not the parking will be adequate for members of the community who want to access it for the various recreational activities down there.

00:17:18.000 --> 00:17:31.000

And of course. Greenhouse gas emissions for all this uh traffic is going to be generated For the parking in the ferry.

00:17:31.000 --> 00:17:44.000

And finally, I'm very interested in making sure that the ferry doesn't interrupt The wildlife patterns, we have a lot of migratory ducks and other birds, seasonal visitors to Berkeley.

00:17:44.000 --> 00:17:53.000

Who come and go from that area. And I'd like to make sure that the ferry activity is not disruptive to their natural habitat.

00:17:53.000 --> 00:17:55.000

Thank you.

00:17:55.000 --> 00:17:59.000

Thank you, Tony. Okay, we have… Go ahead.

00:17:59.000 --> 00:18:08.000

Leo, real quick. Will you review really quickly how to raise your hand just in case there are folks in the audience who are less familiar with Zoom?

00:18:08.000 --> 00:18:20.000

Got it. Yes. I actually, I think I have a little bit of a different viewer because I have I'm presenting um Roger, do you know how to do that?

00:18:20.000 --> 00:18:27.000

Yeah. So at the bottom of your screen, there should be a button. You have several buttons and one of them is called reactions.

00:18:27.000 --> 00:18:38.000

Can you see, can you nod your head if you see reactions on your okay so click on that and then you'll you'll have it a bunch of different options. And one of them is a hand raise and you just click on that.

00:18:38.000 --> 00:18:46.000

I know most people are familiar with that but this is a good reminder. So thanks, Leo.

00:18:46.000 --> 00:18:47.000

Sorry, I actually… I actually click on it and it does not come up.

00:18:47.000 --> 00:18:48.000

Okay. Liza, where's yours?

00:18:48.000 --> 00:18:52.000

I actually couldn't find it. That's why I asked. So thank you.

00:18:52.000 --> 00:18:53.000

Thank you. Yeah, so I don't know.

00:18:53.000 --> 00:18:58.000

It is in the same place. Under React, you should be able to raise it.

00:18:58.000 --> 00:19:01.000

If I do that, can you understand that? Okay, great. Cool. Okay, thanks.

00:19:01.000 --> 00:19:02.000

Raise your hand. Yeah. If Claudia raises.

00:19:02.000 --> 00:19:05.000

Yep, we see it, Claudia.

00:19:05.000 --> 00:19:16.000

I'm going to go to the ones I see. And then, Claudia, I want to make sure that you get after. So if I see that, I will call on you. So let's go next.

00:19:16.000 --> 00:19:19.000

In line is Camille.

00:19:19.000 --> 00:19:24.000

Yeah, hi, thanks. I got a couple of questions.

00:19:24.000 --> 00:19:29.000

So my first one is.

00:19:29.000 --> 00:19:47.000

Does when you're thinking about the ERR, What is the role, if any, of sort of a baseline usage like do you have Do you think of the different recreational activities and the impact on them?

00:19:47.000 --> 00:19:59.000

From a certain baseline as in like the change would be such and such from a baseline in order to determine whether or not the impact is significant.

00:19:59.000 --> 00:20:14.000

Yeah, I can just answer that real quick. And I do want to also encourage if If you want to please provide your comments in writing, that would also be very helpful. But in general, CEQA does require that environmental impacts consider

00:20:14.000 --> 00:20:31.000

Impacts related to a baseline. And the baseline is the existing, usually the existing conditions At the time that the notice of preparation is is released. So existing conditions at the time of the NOP.

00:20:31.000 --> 00:20:50.000

Ah, okay. Interesting. Okay. My second question is um about dredging, are you characterizing the dredging As new dredging or would this be only characterized as maintenance dredging?

00:20:50.000 --> 00:20:58.000

I do see the federal navigation channel on the charts, but from the overlay of the actual terminal itself.

00:20:58.000 --> 00:21:06.000

That there would have to be a dredging a little bit closer to the pier beyond the actual boundary of the channel.

00:21:06.000 --> 00:21:13.000

So how are you characterizing dredging for the sake of this project.

00:21:13.000 --> 00:21:28.000

You know, I think I'm just going to say, I think that that's probably something that consider with a written comment, if you will consider that in our document and make it very, very clear whether it's considered You.

00:21:28.000 --> 00:21:34.000

But I'm sorry, don't you know?

00:21:34.000 --> 00:21:36.000

Yes.

00:21:36.000 --> 00:21:56.000

We're working on the EIR project description. As we speak, because it's the very beginning of the process. And so detail all the details, including that arise from your questions today will be considered in the EIR. So actually, it's a good question and thanks for

00:21:56.000 --> 00:22:03.000

For bringing it up because then we'll make sure to address it specifically in the project description and the EIR as well.

00:22:03.000 --> 00:22:21.000

Okay, because I did see it referred to as existing dredging along an existing channel, however, the project plan is goes a little bit beyond that. So that was in the city letter. So I guess I'm not sure how you're describing the

00:22:21.000 --> 00:22:27.000

The project, but you're saying you're going to describe it as you go is what you're saying.

00:22:27.000 --> 00:22:40.000

Yeah, it's dredging that's happening within an existing channel. And the details of the Dredging will be included in the project description.

00:22:40.000 --> 00:22:56.000

Okay. So, um. Would it be possible to make available a better map that overlays like the actual federal navigation channel with the dredging area.

00:22:56.000 --> 00:23:01.000

That would be required, whether that's deepening the existing childhood channel, widening it.

00:23:01.000 --> 00:23:10.000

Or extending it to a completely new area. Would that be possible before May 19th?

00:23:10.000 --> 00:23:24.000

I don't know if that that would be possible, but I will say that the footprint that we've identified in the part of in the scoping comment That includes the limits of where dredging would occur.

00:23:24.000 --> 00:23:31.000

Okay. All right. So that is beyond the federal channel. If I look at the, say the note that the city passed around.

00:23:31.000 --> 00:23:32.000

So it's not existing. It's on charts. It's on charts.

00:23:32.000 --> 00:23:38.000

We haven't identified the federal channel in that figure. We just kind of… Okay.

00:23:38.000 --> 00:23:47.000

Okay, then my other question, and then I'll be quiet for now and let others ask as we come around.

00:23:47.000 --> 00:24:12.000

How does CEQA balance, whatever environmental impact we identify with any sort of economic benefits that may or may not come out of the ferry. So in terms of understanding if the comments, the EIR comments that we provide should also say shed light

00:24:12.000 --> 00:24:17.000

On what might be the economic benefits to Berkeley.

00:24:17.000 --> 00:24:22.000

Yeah, I'll just answer this briefly just kind of to give you an overview of the SQL process.

00:24:22.000 --> 00:24:29.000

Once the Leslie, would you go back to the timeline real quick?

00:24:29.000 --> 00:24:52.000

When the city decided Yeah, went in the purple. City makes a decision on the EIRN project so When there is a decision whether or not to certify the EIR, or approve the project. There'll be a document that's called a findings of fact and statement of overriding consideration

00:24:52.000 --> 00:24:53.000

Okay.

00:24:53.000 --> 00:25:10.000

Wherein the city will identify the economic benefits or the reasons ultimately why they will they will approve or not approve or certify or not certify the project depending on That's kind of where the process goes. So it's in that part of the city makes a decision on the EIR and project

00:25:10.000 --> 00:25:19.000

Okay, so we should then include comments on the overriding considerations then in our EIR comments due May 19th, right?

00:25:19.000 --> 00:25:28.000

You can send those now or you can send them. You'll also have the other opportunity to provide them during the draft EIR 45 day period.

00:25:28.000 --> 00:25:29.000

Yes, we want to take as many comments as possible.

00:25:29.000 --> 00:25:40.000

Okay. Okay, I'm just trying to understand what CEQA is actually like legally obliged to evaluate.

00:25:40.000 --> 00:25:49.000

So CEQA is not required to evaluate economic impacts. The EIR itself would not evaluate economic impacts, to be clear.

00:25:49.000 --> 00:25:59.000

Okay, okay. And also, I'm sorry, I missed it at the beginning. Ms. Bennett, could you Are you the consulting firm that would be preparing the EIR?

00:25:59.000 --> 00:26:03.000

Yes, as Leo introduced at the beginning, I'm on the Rincon consultants team.

00:26:03.000 --> 00:26:10.000

So we are hired by the city of Berkeley. To prepare the EIR.

00:26:10.000 --> 00:26:12.000

Okay, thank you. All right. I'll do it.

00:26:12.000 --> 00:26:22.000

So, and real quick, Leo will continue to call on folks with their hands raised, but I just want to really clarify the purpose of this meeting for everyone. This is Liza speaking.

00:26:22.000 --> 00:26:30.000

We're here tonight to receive comments on the scope of the EIR. That is, what should the EIR study?

00:26:30.000 --> 00:26:35.000

Hormonal impacts or environmental resources, do you want to make sure are covered in the EIR?

00:26:35.000 --> 00:26:49.000

We're not here tonight to answer detailed questions about the project. The project description, details, and what those actual environmental impacts are are all things that we are continuing to develop.

00:26:49.000 --> 00:27:06.000

I just want to clarify what we're here to do today is to really hear from the public on what you want to make sure is covered in AIR and not to speak to the specifics of the project. All of that information will be in the EIR that we have yet to start preparing.

00:27:06.000 --> 00:27:16.000

Thanks, Liza. Yeah, Jack Morrill or morel is next.

00:27:16.000 --> 00:27:17.000

Real.

00:27:17.000 --> 00:27:27.000

Yeah, thank you. Morel, like the mushroom, but I'm I'm not a mushroom person. So a few things I would just maybe second the comments from Camille around baseline usage and water quality from Tony.

00:27:27.000 --> 00:27:46.000

So I'm someone who's someone who occasionally kayaks frequently does open water swimming in the bay Berkeley is one of the few access points in the East Bay for people who do open water swimming, both in the basin And from the south.

00:27:46.000 --> 00:27:58.000

Southwest corner, which is where the HS Lordship restaurant is. So I have a few points about, I think, the what of what should be studied. I think the first one would be parking at completion.

00:27:58.000 --> 00:28:07.000

If you think about recreation. You're basically proposing that all of the parking be turned into parking for the ferry.

00:28:07.000 --> 00:28:17.000

And while I do occasionally ride bike or know people that take bus, if you turn all that parking into paid parking, you really limit the ability for people to recreate at the site.

00:28:17.000 --> 00:28:28.000

So I think you should consider what the impact is to say like periodic or part-time users of this outside of people who would come and park strictly for access to the ferry.

00:28:28.000 --> 00:28:45.000

I think the second one. Would be parking and access during construction that southeast, sorry, southwest corner is realistically the only access point right now. The city has failed to maintain two of the three docks in a sailing basin, which

00:28:45.000 --> 00:28:57.000

Puts a lot of traffic going through that southwest corner. So I would figure out how you make existing resources available and accessible to people during construction rather than just close everything off.

00:28:57.000 --> 00:29:11.000

Especially kind of considering the first point as well. And then the third one would be about like maintenance and durability of what you're putting in. I think this probably falls under the Maybe aesthetics and visuals may be the point about

00:29:11.000 --> 00:29:22.000

Recreation, but because the city has not maintained two of the three docks in the sailing basin. Traffic is going to that southwest corner.

00:29:22.000 --> 00:29:33.000

So I would think about how you can build something that minimizes impact, but also maximizes the ability for people to recreate there and have something that actually is durable and enduring.

00:29:33.000 --> 00:29:39.000

Rather than something that that fails or isn't maintained.

00:29:39.000 --> 00:29:48.000

Because it's only one access point, it's really frequently closed off or inaccessible so figuring out how to take advantage of that would be really important.

00:29:48.000 --> 00:29:57.000

I would say kind of to all of those points, Ensign all boat ramp in Alameda is probably a really good model for how you can cover all three of those.

00:29:57.000 --> 00:30:02.000

But I'll leave that to you to do the comparative competitive analysis.

00:30:02.000 --> 00:30:10.000

Happy to take questions or clarification on that.

00:30:10.000 --> 00:30:11.000

Got it.

00:30:11.000 --> 00:30:21.000

Okay. I'll just highlight that. We talk about sailing a lot, but there are many other users of this, especially swimmers and windsurfers that need to be considered.

00:30:21.000 --> 00:30:22.000

Thank you.

00:30:22.000 --> 00:30:31.000

Wonderful. Thank you for your comment. Let's see, who is next? Martin Nicholas

00:30:31.000 --> 00:30:32.000

Yes.

00:30:32.000 --> 00:30:44.000

Right. Am I unmuted? Thank you. I am CEO of the Chavez Park Conservancy, but I'm speaking in this matter As an individual, the Conservancy is not taking a position on this.

00:30:44.000 --> 00:30:50.000

My personal opinion as a person who has loved the Berkeley Fishing Pier for many years.

00:30:50.000 --> 00:30:58.000

Is that the… ferry project is a classic politician's vanity project.

00:30:58.000 --> 00:31:14.000

There is no economic, social, or other necessity for this very It's being projected simply because it's being simply It's a way to focus attention on the politicians who want it.

00:31:14.000 --> 00:31:20.000

And who see a way to build their careers behind this project.

00:31:20.000 --> 00:31:29.000

So let's say that I'm flatly opposed to it. My view is that what needs to happen is to fix the pier.

00:31:29.000 --> 00:31:35.000

Fix the peer that as it is. And forget the fairy.

00:31:35.000 --> 00:31:40.000

But uh you're going to go ahead with an EIR.

00:31:40.000 --> 00:31:59.000

I would first of all second the first of all reservations and questions that have been raised by others about about water about disturbance of existing small boat traffic about parking especially, which is a major impact.

00:31:59.000 --> 00:32:05.000

And I would ask also that i would ask that

00:32:05.000 --> 00:32:10.000

You can't put plain economics in an EIR. You just said that.

00:32:10.000 --> 00:32:16.000

You're not going to look at the budget of the ferry as part of the EIR.

00:32:16.000 --> 00:32:24.000

But it's predictable that the money that's going to go into the ferry is going to take away money from other projects.

00:32:24.000 --> 00:32:37.000

And so I think the EIR ought to look at the sacrifices to other environmental projects that are going to be made in order to pay for the ferry going forward.

00:32:37.000 --> 00:32:45.000

It's not a strictly budget type analysis. It's an environmental analysis mediated by budget issues.

00:32:45.000 --> 00:33:06.000

I would also like the EIR to look at other alternative for transportation across the bay. I don't know if this is already part of it but What's the impact of this ferry project on car traffic across the bridge, and more important, what's the impact of this very

00:33:06.000 --> 00:33:11.000

On BART traffic across the bridge. Has that been looked at at all?

00:33:11.000 --> 00:33:14.000

I would like it to be looked at as part of the project.

00:33:14.000 --> 00:33:20.000

If it goes forward at all. All right. That's it for right now. Thank you.

00:33:20.000 --> 00:33:26.000

Thank you, Martin. Up next, we have aaron Team.

00:33:26.000 --> 00:33:36.000

Yes, thank you for taking my comment. So as far as alternatives, I would like you to study having just the pier and no ferry.

00:33:36.000 --> 00:33:45.000

And I also appreciated what the former speaker just said about impacts of the ferry on other forms of transportation, particularly BART.

00:33:45.000 --> 00:33:54.000

And potentially bus traffic. And I'm very concerned about the impact of the parking for the ferry.

00:33:54.000 --> 00:34:15.000

On recreational access. So I want that to be studied very closely and I would like that study to include the visitors needs for transporting equipment like sails and their surfboards and everything that they need that they can't just park anywhere. They need to be closer to the location where they need to launch.

00:34:15.000 --> 00:34:29.000

I would like the time covered to be expanded it is currently too short. And if we're really serious about talking about biological resources, we have to think about migratory species.

00:34:29.000 --> 00:34:40.000

So if we limit the study to a point in time, and it is a time when the migratory species are not here, we don't actually evaluate the impact on those migratory species.

00:34:40.000 --> 00:34:49.000

So there needs to be, I don't know, three or four points of time that look at when the overwintering birds are here.

00:34:49.000 --> 00:34:53.000

When the birds are migrating and when the summer species are here.

00:34:53.000 --> 00:35:00.000

I would like the area to be expanded. It is too small to correctly evaluate the impact on biological resources.

00:35:00.000 --> 00:35:07.000

For example, there has been a white-tailed kite, a pear, nesting down at the marina.

00:35:07.000 --> 00:35:12.000

And it is right across from, it's not included in the outline of your area.

00:35:12.000 --> 00:35:19.000

But if the trees at the Shorebird Nature Center Park are cut down, and we've had quite a bit of public comment on that.

00:35:19.000 --> 00:35:23.000

And the whitetailed kite happens to hunt there to feed its babies.

00:35:23.000 --> 00:35:27.000

And those trees are gone and the wildlife that is there is removed.

00:35:27.000 --> 00:35:31.000

Then that whitetail cut may no longer be able to actually survive there.

00:35:31.000 --> 00:35:43.000

And so if you don't actually take into account the larger area, you won't actually take into account, evaluate the impact on the birds that might not live in that very small circumscribed area that was in the map you all shared.

00:35:43.000 --> 00:35:54.000

I would like you to expand the species that are covered. And this is a question, my understanding is sequels only cover listed species. Is that true?

00:35:54.000 --> 00:35:56.000

We look at special status species.

00:35:56.000 --> 00:36:15.000

Okay, so I think that that's inadequate to actually evaluate the impact on biological resources. And I would like that to be expanded to a broader basically all species, because we know that basically most species are in steep decline and many of them are at risk of extinction. I would also like to expand the impact of cumulative impact

00:36:15.000 --> 00:36:26.000

My understanding was you said you would actually maybe look at some of like the proposed hotel development, but we know that this ferry system is looking at putting in, I think it's 27 terminals.

00:36:26.000 --> 00:36:31.000

And we know that that will have a massive impact. On the entire Bay ecosystem.

00:36:31.000 --> 00:36:37.000

Specifically for the ferry I would like you to look at both the impacts of diesel and electric.

00:36:37.000 --> 00:36:43.000

And also the impact on just single Berkeley terminal and a fully built out cumulative impact with 27 terminals.

00:36:43.000 --> 00:37:01.000

I've liked energy use So BTUs per passenger mile compared with other forms of transportation like BART, The noise impacts of the fossil fuel and electric ferry above and below the water The increase in turbidity, potential detriment on water quality.

00:37:01.000 --> 00:37:06.000

A big one is ship strikes, and this is where cumulative impact is very important.

00:37:06.000 --> 00:37:11.000

We've had five whale deaths in the Bay recently. One of them was confirmed to be a ship strike.

00:37:11.000 --> 00:37:18.000

And also something I'm extremely concerned about is light pollution. Potentially on the pier.

00:37:18.000 --> 00:37:28.000

Because we know that light pollution is a significant contributor to insect declines, which we know are have declined globally by 75%.

00:37:28.000 --> 00:37:36.000

Which then also has impacts on fish and birds. For birds, I would like all the species in the area documented.

00:37:36.000 --> 00:37:38.000

Including migratory and resident i would like

00:37:38.000 --> 00:37:45.000

I'd like to take this off. See if we can reposition it

00:37:45.000 --> 00:37:51.000

Tony, were you did were you? Say anything?

00:37:51.000 --> 00:38:03.000

Okay, I'm going to keep going. I have three more points. So I've really been very disappointed in EIRs in the past for other projects. I need to be really honest. I feel like they're very inadequate. There's a lot of data out there right now.

00:38:03.000 --> 00:38:16.000

Like eBird that needs to be incorporated. So we have truly thorough lists of the species that have been documented in these spots. So specifically for this, I would like eBird to be used for the hot spots.

00:38:16.000 --> 00:38:21.000

To identify the up to 200 species that have been documented out at the waterfront.

00:38:21.000 --> 00:38:39.000

And not just in that very small mapped area, but as I've said before, Cesar Chavez Park and East Shore Sylvia McLaughlin or Sylvia McLaughlin East Shore State Park, because we know those birds Those birds don't just stay over there. They fly all around the whole area. And we know we have the pelicans that fly all up and down.

00:38:39.000 --> 00:38:45.000

The coast and we need those animals to actually be protected and incorporated into the study.

00:38:45.000 --> 00:38:53.000

And for example, the burrowing owls, which we know are now being considered as an endangered species for the state of California.

00:38:53.000 --> 00:39:06.000

Like to see them also incorporated. And… Also, all lists of the species of special concerned and fully protected species, which I think, Leo, you already said you all would include.

00:39:06.000 --> 00:39:23.000

But I guess the major thing is these EIRs to me they just, they're not large enough. They're not expansive enough to look temporally migratory and residential species. And then also the impact of this system that's being proposed, just one single ferry terminal versus 27.

00:39:23.000 --> 00:39:29.000

And if we don't look at it and the cumulative impacts, I don't actually think that we're doing a good job to evaluate the environmental impacts.

00:39:29.000 --> 00:39:31.000

Thank you.

00:39:31.000 --> 00:39:37.000

Thank you. Okay. We got David Fielder next.

00:39:37.000 --> 00:39:46.000

Okay, thank you. One of the things I focused on in your introduction was you would love to hear alternatives.

00:39:46.000 --> 00:39:52.000

We've been talking about alternatives for years now with WIDA and the city of Berkeley.

00:39:52.000 --> 00:39:57.000

I specifically spoke with WIDA management. And was told we won't consider.

00:39:57.000 --> 00:40:04.000

Alternative the alternative of having a small foot ferry coming out of the inner harbor.

00:40:04.000 --> 00:40:09.000

Which solves many of the problems that you're being asked to address.

00:40:09.000 --> 00:40:14.000

They won't consider it. So that leads me to the question, and I'm sure it's technical.

00:40:14.000 --> 00:40:31.000

Of lead agency versus responsible agency. If Berkeley, City of Berkeley is the lead agency and has the ability to decide what to do? Why is WIDA the responsible agency?

00:40:31.000 --> 00:40:39.000

And controlling the purse strings and actually controlling the design of this project.

00:40:39.000 --> 00:40:44.000

When push comes to shove. So those are some concerns.

00:40:44.000 --> 00:40:54.000

You talked about the construction staging area. I was very closely involved with the construction of the new launch area at Point Isabel Regional Park.

00:40:54.000 --> 00:40:59.000

East Bay Regional Park District. And we lost access to that site for quite a while.

00:40:59.000 --> 00:41:12.000

Because of construction staging. What you showed in the graph or the chart earlier tonight showed the whole of His lordship's parking lot being used for construction staging.

00:41:12.000 --> 00:41:20.000

If we can't access that cove, as you heard from another participant tonight. That's a disaster.

00:41:20.000 --> 00:41:25.000

I also have the sense that the sense This is a done deal.

00:41:25.000 --> 00:41:32.000

There will be, that's how it's being phrased. There will be this, this, this.

00:41:32.000 --> 00:41:45.000

Recreational improvements, on the other hand, are under consideration. We had a focus group meeting just a week ago about access to the code at 199 Sewell Drive.

00:41:45.000 --> 00:41:53.000

That's certainly threatened by construction staging. And then my last comment will be existing conditions.

00:41:53.000 --> 00:42:00.000

Where is your baseline? What was the use in 2015 when the pier was open?

00:42:00.000 --> 00:42:10.000

Now, of course, the existing conditions are the piers closed. What was the existing conditions when the parking lot and his lordships was open.

00:42:10.000 --> 00:42:16.000

It's been locked for many years now. Is that your existing condition?

00:42:16.000 --> 00:42:23.000

So be careful in the timeline that you're talking about. I think that's about it for me. Thank you.

00:42:23.000 --> 00:42:29.000

Thank you. Okay, we got Gordon Stout next.

00:42:29.000 --> 00:42:31.000

Can you hear me? Okay.

00:42:31.000 --> 00:42:33.000

Yes.

00:42:33.000 --> 00:42:40.000

Probably all of you are familiar with the Skates restaurant and have been there near the base of the pier.

00:42:40.000 --> 00:42:55.000

In the area where the WIDA ferry will dock. I don't know if you've been there in the middle of the summer when the wind is really The wind surfers are all happy because It's blowing really hard.

00:42:55.000 --> 00:43:05.000

And you get a lot of waves and you get a lot of wind and you get a lot of push on anything that's out there in the water.

00:43:05.000 --> 00:43:10.000

Now, when When the WIDA fairy comes in.

00:43:10.000 --> 00:43:15.000

There is a critical time. When if something happens.

00:43:15.000 --> 00:43:29.000

Something unexpected and rare, but if something happens And the fairy loses control because of some mechanical problem or personnel problem, whatever.

00:43:29.000 --> 00:43:38.000

Then there is a chance of that ferry washing up on the shore or washing up on the skates restaurant.

00:43:38.000 --> 00:43:49.000

Washing up on the shore is a bad thing. Washing up on the skates restaurant is a very bad thing indeed because it's it could do damage to the restaurant. It could hurt people.

00:43:49.000 --> 00:43:57.000

I think that needs a careful look. It's a complicated problem.

00:43:57.000 --> 00:44:05.000

It's not these are going to be different from our regular ferries, right? They're new ferries, which is a good thing.

00:44:05.000 --> 00:44:12.000

But there are also unknowns. We don't know. What kind of failures they're likely to have.

00:44:12.000 --> 00:44:23.000

And the question of how you respond to such a situation. Okay, you're going down there and suddenly, whoops, this thing isn't working anymore. What do we do?

00:44:23.000 --> 00:44:26.000

How you respond to that situation is complicated to figure out.

00:44:26.000 --> 00:44:37.000

So I think that needs some attention. And my written document has a bunch of stuff in it, which I think you might want to refer to about it.

00:44:37.000 --> 00:44:46.000

But the ARR has to chase that down. And make sure that you're not making something that in a few years you'll find a few years.

00:44:46.000 --> 00:44:56.000

That people are getting hurt and they shouldn't or people have gotten hurt. It'll happen one time once I do have a bunch of other things about the parking in the marina.

00:44:56.000 --> 00:45:12.000

Mostly, I'm really concerned. That if you put this much extra parking into the marina and essentially turn every parking lot into at the appropriate times of year into a full parking lot You'll change the character of the place.

00:45:12.000 --> 00:45:24.000

If you have the marina such that in order to use all your parking, you have to go park way on the other side of the marina and then come back to where the place you actually wanted to go.

00:45:24.000 --> 00:45:39.000

For recreational users, that's a nightmare. For commuters, it's kind of a nightmare, although commuters deal with nightmare. That's why they're commuters.

00:45:39.000 --> 00:45:43.000

But it changes the place. It changes it visually.

00:45:43.000 --> 00:45:49.000

Have you looked at Larkspur? The Larkspur landing place. It's a big old parking lot.

00:45:49.000 --> 00:46:00.000

That's what it is. The Berkeley Marina is not a big old parking lot. It's a beautiful place.

00:46:00.000 --> 00:46:03.000

That's all for now.

00:46:03.000 --> 00:46:12.000

Thank you. Okay, we're going to follow up with uh Kelly R. Margarren.

00:46:12.000 --> 00:46:20.000

Okay, thank you. I am disappointed. I'm sorry that this is going to be another Rincon EIR.

00:46:20.000 --> 00:46:26.000

I've been looking at your EIRs for now for 11 years, those in berkeley.

00:46:26.000 --> 00:46:42.000

And the analysis for biological impacts has been very disappointing and I don't think it really can be categorized as sloppy.

00:46:42.000 --> 00:47:04.000

For me, it seems to fit more of a profound intentional ignorance on the impact of projects So I hope that you do differently with this project because this is a site where we have migrating birds.

00:47:04.000 --> 00:47:12.000

And resident birds and marine life And the ferry and the pier are going to affect all of these.

00:47:12.000 --> 00:47:36.000

The area that you're studying is way too small. And I was also very disappointed with the parking study that was presented to the parks, recreation and waterfront commission uh from reading that study deliberately excluded peak use times in terms of analyzing what kind of parking

00:47:36.000 --> 00:47:59.000

Was needed. You know, all these EIRs are put together and written to support the decisions that have already been made I have very low expectation that this will be any better than the kind of EIRs that I've seen in the past, but I still hold a small amount of hope

00:47:59.000 --> 00:48:06.000

That you will do better and actually consider biological impacts.

00:48:06.000 --> 00:48:13.000

So those are my critical comments. Thank you.

00:48:13.000 --> 00:48:24.000

Thank you. Thank you Okay, Bill.

00:48:24.000 --> 00:48:29.000

Okay. Roger, would you be able to unmute Bill? We're not hearing Bill.

00:48:29.000 --> 00:48:46.000

Yeah, I sent a message to Bill. Saying go ahead and unmute the computer. So I've done that and Some people's Zoom accounts have… are a certain version that don't work anymore. And we don't have control over that.

00:48:46.000 --> 00:48:54.000

So Bill, do you see that message on your screen? I'm sending an unmute signal to your computer. There you go. Great.

00:48:54.000 --> 00:48:59.000

There you go. All right. Thank you so much for unmuting me.

00:48:59.000 --> 00:49:06.000

And uh um I'm enjoying all the different things that people are having to say. They seem very important.

00:49:06.000 --> 00:49:19.000

About the environmental impact of this. I come from the recreation side and perhaps I'm a little selfish about trying to get things for the people who are going to recreate down there. I'm following Jack Morrell here. I'm wondering, first of all.

00:49:19.000 --> 00:49:24.000

What's going to happen to his Lordship's restaurant? I noticed in the outline you gave us of the project.

00:49:24.000 --> 00:49:40.000

His lordship's restaurants seemed to be outside the outline but It certainly cannot be outside of the area that we're talking about since it's so adjacent interred in the area. Secondly, I was wondering about about what could be used for

00:49:40.000 --> 00:49:51.000

But his lordships could be used for if it could not be used for a restaurant anymore. It doesn't seem like it might be financially functional there, it would be a wonderful thing to turn into a nonprofit where people could start

00:49:51.000 --> 00:49:59.000

The city of Berkeley could use that space to help people access the water in all the different ways there is and teach them about use of it.

00:49:59.000 --> 00:50:10.000

I would also like to suggest that I was wondering about the area, the so-called saber, the perpendicular water.

00:50:10.000 --> 00:50:24.000

I guess the peer that is going to… that is you're talking about, isn't that what it's called, the perpendicular section of the uh of the peer that is going to jet into the basin now it's going to be a brand new

00:50:24.000 --> 00:50:41.000

Fixture added to the pier. You also said that there was going to be uh access to that area, which that uh I was wondering if that access will also lead us to the water as well, not just be access for fishermen or access for viewing.

00:50:41.000 --> 00:50:57.000

And so, yeah, my main purpose is to take this if this this innovation, if it is going to happen, and let it improve the access of the water for people who are not going to be using it as a transportation

00:50:57.000 --> 00:51:03.000

To the city. And perhaps that might help the city of Berkeley sell the whole project too.

00:51:03.000 --> 00:51:06.000

But that's just a suggestion. Thank you very much.

00:51:06.000 --> 00:51:12.000

Thank you, Bill. Up next, Friends of Five Creeks.

00:51:12.000 --> 00:51:20.000

Yes, I'm Susan Schwartz. I'm speaking as an individual not representing Friends of Five Greeks.

00:51:20.000 --> 00:51:28.000

This is my only Zoom account and I can't have two on my computer. I am not speaking for Friends of Five Creeks. Thank you.

00:51:28.000 --> 00:51:35.000

I agree with many of the things that have been said, and I expect to send written comments.

00:51:35.000 --> 00:51:40.000

But I want to speak to a basic question of safety.

00:51:40.000 --> 00:51:56.000

This terminal. Is being built on a artificially filled peninsula of unconsolidated fill jutting half a mile into the bay with one road In and out.

00:51:56.000 --> 00:52:03.000

This is a well-documented tsunami zone. We just had a little practice, didn't we?

00:52:03.000 --> 00:52:09.000

And certainly, it's not the place you want to be if there's a big quake.

00:52:09.000 --> 00:52:14.000

I considered criminally negligent.

00:52:14.000 --> 00:52:29.000

To propose this with only one road in and out. So I will stop there but i have more to say. I do have a… Question.

00:52:29.000 --> 00:52:34.000

To clarify. Other people have raised this.

00:52:34.000 --> 00:52:40.000

Are you going to consider Literally, present conditions.

00:52:40.000 --> 00:52:45.000

So that any increase in parking, let's say at the His Lard Ship.

00:52:45.000 --> 00:52:58.000

Love or any increase in ability to is because there is none now on the pier now is a total Net.

00:52:58.000 --> 00:53:03.000

Plus, is that your proposed analysis?

00:53:03.000 --> 00:53:22.000

So this is Liza. What I'll say is just sort of reiterate as far as measuring the whether it is a net plus or not, that analysis hasn't been done yet. So I don't want to put Leo on the spot to have him try to answer that. I think what he has said is that the existing condition

00:53:22.000 --> 00:53:30.000

Is defined as the existing condition essentially at the time of the NOP, which is now.

00:53:30.000 --> 00:53:38.000

But as far as what the impacts from that existing condition are, that analysis has not been completed.

00:53:38.000 --> 00:53:43.000

And then a similar question. Since, as others have pointed out.

00:53:43.000 --> 00:53:55.000

The ferry is fairly well defined, but possible changes to recreational positive and negative or not.

00:53:55.000 --> 00:54:03.000

Than anything anyone has to say has to be completely hypothetical.

00:54:03.000 --> 00:54:08.000

Is that correct? And if not, why is that not correct?

00:54:08.000 --> 00:54:31.000

So the project description includes a description of the ferry as well as multiple recreation amenities, such as a cycle track, pedestrian pathways, and improved water access on the peninsula. Those are all described at the level of detail that they are currently developed and we will continue to develop

00:54:31.000 --> 00:54:35.000

That level of detail as the project progresses.

00:54:35.000 --> 00:54:51.000

So if we want to comment on some of those, positive or negative we should look at that at what's there now and do our best is that there's best what you're telling me?

00:54:51.000 --> 00:54:59.000

So this scoping period is to make comments on the scope of the EIR, what the EIR will study.

00:54:59.000 --> 00:55:00.000

I understand that.

00:55:00.000 --> 00:55:20.000

There will again be the opportunity to comment on the draft EIR itself, and that will have a much higher level of detail regarding The project description and project elements. So as far as comments to report now, yes, those comments should be based on the project description that has been published.

00:55:20.000 --> 00:55:25.000

Thank you.

00:55:25.000 --> 00:55:33.000

Wonderful. Thank you. Next up is sally

00:55:33.000 --> 00:55:34.000

Yes.

00:55:34.000 --> 00:55:45.000

Hi, are you able to hear me? Fabulous. Okay. So I'd like to um perhaps add a few things to the scoping list.

00:55:45.000 --> 00:55:56.000

The first one I'd like to mention is that the city has been deriving income from the marina for many years.

00:55:56.000 --> 00:56:26.000

The success or failure of the various projects that are being considered in the EIR, They will survive or fail based on the city's conduct with regard to budgetary matters. And so as part of the EIR, will there be any kind of commitment by the city of Berkeley for ongoing maintenance or other kinds of issues like dredging.

00:56:30.000 --> 00:56:47.000

For the South Basin and other areas, you know, because the financial backing of this highly successful city park It really needs a commitment, in my opinion.

00:56:47.000 --> 00:57:16.000

The second thing that I'll mention is that I didn't see safety listed on the very on this on the screen that had the various factors that an EIR would analyze. And I grew up in Port Angeles, Washington, which is a small town on the Olympic Peninsula with a ferry boat to Victoria, British Columbia.

00:57:16.000 --> 00:57:45.000

And also, I have… used Washington state ferries many times. And the communities where the ferry terminals are located are exceptionally dangerous for pedestrians bicyclists and others who wish to use the roadways or sometimes even the sidewalks. Because as people

00:57:45.000 --> 00:57:52.000

Get into a rush and they're trying to make a ferry at a particular time.

00:57:52.000 --> 00:58:11.000

You know, they're thinking about that instead of watching out for children. And I think that we will have fatalities if we end up putting a ferry terminal inside what is a highly successful family-oriented park.

00:58:11.000 --> 00:58:34.000

I love the Berkeley Marina. And then the um and then the The third issue is just that the marina, in my opinion, is Berkeley's best park. And to turn it, it's just inconceivable that it would be turned into a commuter corridor.

00:58:34.000 --> 00:58:52.000

And as a kayaker, I've visited the Berkeley Marina many times when I had to search and search and search for a parking place and yet that will be even worse with with parking for the ferry. And I'll stop there. Thanks.

00:58:52.000 --> 00:58:58.000

Thank you. Okay, we have… Jack Morrell.

00:58:58.000 --> 00:59:11.000

I came back. I had… some other points that were raised. I mean, first, I'll say this, it's off topic, but that seems to be what some people are here for is This meeting is a solicitation of what the study should cover.

00:59:11.000 --> 00:59:27.000

I think it's fine to be disappointed with the content of studies past and the impact that this project might have, but I don't think unsubstantiated complaints and off-topic remarks, they're not really going to improve anything so Hopefully everybody can do better. I liked

00:59:27.000 --> 00:59:35.000

That this will stay on topic. So I had three additional points that are related to what was said before.

00:59:35.000 --> 00:59:51.000

The first one around the seawall, I think it'd be helpful to maybe look at the what around the seawall in regards to there are very few access points, but that's because the seawall is quite treacherous to climb down to get to the water.

00:59:51.000 --> 01:00:01.000

I think a request on what to study would be like softening that seawall in some way. I don't know what's feasible, but some seawalls are not.

01:00:01.000 --> 01:00:10.000

Car-sized rocks. Some of them are smoothed berms, I think it'd be interesting to look at maybe from the geotechnical engineering perspective.

01:00:10.000 --> 01:00:15.000

I would also second the concern about the infill that that peninsula is built on.

01:00:15.000 --> 01:00:20.000

I don't know what impact dredging has, especially since it's already been dredged.

01:00:20.000 --> 01:00:28.000

But I would question what sort pollutants or sediment are stirred up from dredging existing areas that might have been part of the infill.

01:00:28.000 --> 01:00:34.000

Given that I think there was some sort of hazard or radiation detected in a number of different parts of the bay.

01:00:34.000 --> 01:00:50.000

And the third one would be maybe hydrology impacts. Maybe it's more of a question, but by putting that saber in Does that material materially change the tidal impacts of the sailing basin?

01:00:50.000 --> 01:01:04.000

I don't think so, but I think it might be helpful to indicate that just because the tides in the bay are very fickle and complicated. And when you change a little bit of the tide, you get something like you see in Alameda where the beach is effectively gone.

01:01:04.000 --> 01:01:08.000

Those are my other three points. Thank you.

01:01:08.000 --> 01:01:19.000

Thank you. Okay, I think… I think that was, oh, I just saw some more pans go up. Camille.

01:01:19.000 --> 01:01:26.000

Yes. Hi. Yeah, thanks. I wanted to just follow up on a number of comments on baseline.

01:01:26.000 --> 01:01:49.000

Configuration of that. I think that's a really critical point here because um The pier has been closed for 10 years and in that 10 years, I have not really seen any capital improvements In terms of walkways, well, there's a street that goes out to the University Ave. That was great to have fixed.

01:01:49.000 --> 01:02:02.000

But a lot of stuff has just degraded and i understand budgeting issues and things like that. But it really does sort of bring into question what baseline you use.

01:02:02.000 --> 01:02:14.000

So I would like to see in the EIR baselines prior to peer closure. And that would include visitation for fishing.

01:02:14.000 --> 01:02:20.000

And for visitors just recreating, a very popular place to go walking out at sunset there.

01:02:20.000 --> 01:02:26.000

Prior to peer closure, or if there could be a multiplier.

01:02:26.000 --> 01:02:43.000

Some sort of estimate of a multiplier in terms of number of people that are visiting now and visiting now would visit in the future. I actually do have a report that I could make available that is based on, you know, supposed to be based on

01:02:43.000 --> 01:02:55.000

Sound methodology to estimate the increase in demand on fishing. For if the peer, just the peer were reopened Also, his lordships obviously closed.

01:02:55.000 --> 01:03:03.000

And then, so we don't know what it would be next But just assuming what if it's say it's opened as a restaurant.

01:03:03.000 --> 01:03:12.000

Just some accommodation for the visitation, just even if that area If that building was, you know.

01:03:12.000 --> 01:03:18.000

You know, obviously restored and restored some activity was put there.

01:03:18.000 --> 01:03:29.000

I think that should be, um. Put in, be incorporated as a baseline, not the way it is now.

01:03:29.000 --> 01:03:34.000

And… Let's see here.

01:03:34.000 --> 01:03:54.000

So. I guess the yeah so i I'd like to see some methodology that either incorporates a historical baseline based on activity prior to the pier closure.

01:03:54.000 --> 01:04:07.000

And his Lordship's closure. And also assuming and and here's assuming So that's one thing for a baseline for anything that's being considered.

01:04:07.000 --> 01:04:31.000

Second of all. I'd like to see in the alternatives that are examined that that also be examined in terms of some type of baseline. I'm not exactly sure the methodology here but Aaron Dean mentioned having an alternative as a peer with no ferry.

01:04:31.000 --> 01:04:39.000

To understand what to incorporate any sort of changes changes there.

01:04:39.000 --> 01:04:47.000

As well, in consideration of a proper baseline. And…

01:04:47.000 --> 01:04:55.000

And then finally, I don't think anybody's mentioned it there either, but along that route as well.

01:04:55.000 --> 01:05:01.000

Is a habitat, a halibut fishery. Halibut habitat and halibut fishery.

01:05:01.000 --> 01:05:12.000

Very popular, also very seasonal. And so timeline of environmental impact report is very important.

01:05:12.000 --> 01:05:17.000

That halibut fishery varies, but it's roughly from March to September or July.

01:05:17.000 --> 01:05:32.000

July, September. I would like to see an impact on the halibut fishery itself because there's people that fish kind of near where we call the ruins are Now, which would be in the pathway of the ferry.

01:05:32.000 --> 01:05:53.000

But so again, impact on the halibut fishery. And I think there should be a lot of resources available on that because it's a very popular fishery Berkeley is one of the number one sports where sports fishermen come and go out on the sports fishing boats to get to the halibut. And sometimes they don't even go out that far. They just go out to

01:05:53.000 --> 01:06:00.000

You know, somewhere out there between here and San Francisco. To get the halibut So.

01:06:00.000 --> 01:06:02.000

Yeah, I'll stop there. Thank you.

01:06:02.000 --> 01:06:15.000

Thank you. Okay, I see Gordon Stout's hand up.

01:06:15.000 --> 01:06:16.000

I think we're…

01:06:16.000 --> 01:06:21.000

Okay, pressing pressing the unmute button for gordon. Sometimes they have to look at their, oh, Gordon's looking at his screen. There you go. Okay.

01:06:21.000 --> 01:06:31.000

Yeah, sorry. Sorry. Yeah, a…

01:06:31.000 --> 01:06:39.000

Few things at uh from the effects of parking on the marina agenda that I have here.

01:06:39.000 --> 01:06:49.000

The marina currently is used by low-income patrons This was found out in the Kittleson study, for whom paid parking would be very problematic.

01:06:49.000 --> 01:06:59.000

Can you make parking management work without paid parking? Paid parking is one of the main tools that people use when they're trying to get people to park here and not there.

01:06:59.000 --> 01:07:06.000

But can you get it to work without that? Because it definitely has a negative impact in terms of the people who use the marina.

01:07:06.000 --> 01:07:10.000

And who need to be using it.

01:07:10.000 --> 01:07:17.000

Okay.

01:07:17.000 --> 01:07:21.000

If the

01:07:21.000 --> 01:07:31.000

Parking in a distant parking lot is used for recreational people.

01:07:31.000 --> 01:07:48.000

Families with small children. Can you answer the question of what a Family does when they have to park way over yonder and they've got small kids in their van And they've got car seats that they need to use.

01:07:48.000 --> 01:07:56.000

And they have to get back to Adventure Playground because this is where I sail in the South Basin. I see these people all the time.

01:07:56.000 --> 01:08:03.000

Going to a venture playground with, you know, with their family and They're not mobile.

01:08:03.000 --> 01:08:13.000

They have a hard time getting around. That parking lot the south South Cove parking lot, the one that isn't paved.

01:08:13.000 --> 01:08:18.000

Is full, mostly full by 10 in the morning, every morning.

01:08:18.000 --> 01:08:25.000

With… fishing charter boat customers and ferry customers.

01:08:25.000 --> 01:08:30.000

And it's a problem. And in relation to that.

01:08:30.000 --> 01:08:39.000

We did ask at uh

01:08:39.000 --> 01:08:50.000

To have Genentech who run a ferry out of there to maybe get there ferry riders to park somewhere else.

01:08:50.000 --> 01:08:57.000

Did that happen? I guess I'd ask the… I'd like to see this in the EIR. Was it done?

01:08:57.000 --> 01:09:08.000

Did the city try to get Genentech to do the right thing because the city has an obligation to not have Ferry parker parking drive out recreational parking.

01:09:08.000 --> 01:09:15.000

What did that happen? I'd like to know. And if it didn't happen, what can we get to make it happen?

01:09:15.000 --> 01:09:21.000

There is talk in the presentation about using dynamic management.

01:09:21.000 --> 01:09:27.000

It only works if you have somebody within the city who is an advocate for recreational parking.

01:09:27.000 --> 01:09:31.000

And if there isn't that, there's a lot of this stuff isn't going to work.

01:09:31.000 --> 01:09:43.000

We need that.

01:09:43.000 --> 01:09:52.000

My number one item is that the parking study that was done, this is repeating what other people have said, the parking studies that were done, I've looked at them pretty closely.

01:09:52.000 --> 01:09:58.000

They were not adequate. They were not adequate to base the design of a future marina on.

01:09:58.000 --> 01:10:05.000

And that just has to be fixed. There's no point going on and writing an ERR and starting to build hardware.

01:10:05.000 --> 01:10:10.000

Until you know what you're looking at and why you're doing what you're doing.

01:10:10.000 --> 01:10:26.000

So I think we need to do that. We do know from personal experience and from parking counts that we have done and from some of the stuff that from the Kittleson study that there isn't enough parking down there without a ferry.

01:10:26.000 --> 01:10:28.000

So we're pretty darn sure that when a ferry comes in.

01:10:28.000 --> 01:10:38.000

It's going to be way worse. Even if most of the ferry parking is well behaved. It's going to be worse. And we can't make it worse.

01:10:38.000 --> 01:10:44.000

That we can't afford that. That's a disaster. Okay, that's it for me, friend.

01:10:44.000 --> 01:10:45.000

Thank you.

01:10:45.000 --> 01:10:49.000

Thank you. Okay, I see Aaron next.

01:10:49.000 --> 01:11:01.000

Yeah, I want to repeat the request made that the historical baseline should be based on usage prior to the peer closure.

01:11:01.000 --> 01:11:12.000

And prior to the closure of the Lordship's parking lot. Otherwise, I think it's actually just… I don't know how to say this. It's actually not accurate data.

01:11:12.000 --> 01:11:24.000

Because the pier was extremely popular. And you had many people coming down and parking down there. And these were often low income people who were actually providing food for their table.

01:11:24.000 --> 01:11:34.000

For their families and it's like, because if the baseline is is based on what's current day. It's as they don't exist. We cannot ignore them.

01:11:34.000 --> 01:11:47.000

And we can't not ignore their needs for access. And also if his lordships has been parking lot has been closed for a very long time And that has an impact on the number of people who have actually been coming down there.

01:11:47.000 --> 01:12:00.000

So I just I don't see how we can in good conscience say that the baseline will be based on something that is so recent when we need to look In the past when we had many more people coming down there and using the area.

01:12:00.000 --> 01:12:06.000

And I wanted to make a comment that I'm also very concerned about the parking study.

01:12:06.000 --> 01:12:09.000

And the reason is when you look at the Kittleson parking study.

01:12:09.000 --> 01:12:13.000

The data that's reported is from 10 a.m. And 8 p.m.

01:12:13.000 --> 01:12:22.000

And then the highest number of usage at one of those two timeframes was actually indicated to be quite the max, but it's not actually the maximum usage.

01:12:22.000 --> 01:12:28.000

So I might actually say something like particular area had something like, I don't know, 43% occupancy.

01:12:28.000 --> 01:12:33.000

But that was based on 10 a.m. Or 8 p.m. But if you looked at other time.

01:12:33.000 --> 01:12:40.000

Time periods and they have there's a very limited data, a set of data, I think just 11 days. It might have actually been 76%.

01:12:40.000 --> 01:12:48.000

So it's quite, I personally find the day to be very misleading the way it's presented. And so I just want to draw your attention to that.

01:12:48.000 --> 01:12:58.000

The parking study in Kittleson may not actually completely capture the maximum amount of use on certain times of the day.

01:12:58.000 --> 01:13:06.000

And I've actually been in communication with But I try to read meta studies on the environment and ones I'm going to send.

01:13:06.000 --> 01:13:33.000

Is on the soundscape of the Anthropocene ocean, and it is a metastudy that's looking at how EIRs like this do not actually do an adequate, traditionally have not done an adequate job of evaluated the impact of anthropogenic noise on the environment. And there's also another one, light pollution is a driver of insect declines. And so this is all quite recent data around the impact that we're having on our biological resources.

01:13:33.000 --> 01:13:42.000

And yet again, we cannot just limit it to that really small outline that was proposed earlier.

01:13:42.000 --> 01:13:47.000

Thank you. Martin Nicholas.

01:13:47.000 --> 01:13:55.000

Just a small point that Jack Morello prodded my memory. You know, beyond the fishing pier that's closed off.

01:13:55.000 --> 01:14:06.000

There's segments of the former pier from the early 1900 that are just a bunch of pilings that extend, I believe, three miles out into the bay.

01:14:06.000 --> 01:14:15.000

Are you going in your EIR to consider the impact of that dead portion of the pier?

01:14:15.000 --> 01:14:39.000

On navigation and on bird habitation and on all the other occupants and users of the bay certainly from the navigation standpoint, there's not one vessel that doesn't have something to say about the dead portions of the pier. It's a major obstruction to navigation out there.

01:14:39.000 --> 01:14:52.000

And I wonder if your impact report is going to consider that portion of the pier that no longer has a board on it and it's just a set of pilings that go way out.

01:14:52.000 --> 01:14:54.000

Thank you.

01:14:54.000 --> 01:15:04.000

Thank you. And then I wrote your name down because I know that you Is it Susan.

01:15:04.000 --> 01:15:05.000

Yes. Go ahead, Susan.

01:15:05.000 --> 01:15:16.000

Susan Sports. Yes. I… realized that I perhaps did not use the magic word and other people's are not Using the magic word.

01:15:16.000 --> 01:15:43.000

And I'd like, first of all, in my major point. The EIR scope must fully consider the possible risks of tsunami and earthquake on a peninsula of unconsolidated fill jutting a half mile into the bay with only one access entrance.

01:15:43.000 --> 01:16:12.000

Many other people like phrased their comments as phrase what should be done not the scope must consider. So I would like all of you here to assure everyone who's been speaking that you will interpret their remarks as meaning that everything they are citing should be part of the scope.

01:16:12.000 --> 01:16:17.000

It's a question.

01:16:17.000 --> 01:16:26.000

Well, we certainly will. What I can say is that we're taking all of the comments received here and we're considering all of them as we're preparing the environmental document.

01:16:26.000 --> 01:16:34.000

That's not an answer. Will you consider them as being indications of what should be included in the scope?

01:16:34.000 --> 01:16:36.000

I've been to these hearings before. It's a strict requirement if you choose to take it that way.

01:16:36.000 --> 01:16:47.000

Susan, this is a scoping meeting and so all these comments are being treated as scoping comments

01:16:47.000 --> 01:16:53.000

Meaning they should be included in the scope.

01:16:53.000 --> 01:16:54.000

That's not, but that's the problem. That's what I'm asking you.

01:16:54.000 --> 01:16:57.000

That that is the comment that is being provided, yes.

01:16:57.000 --> 01:17:01.000

The comments frequently don't say this should be in the scope. I did not do it.

01:17:01.000 --> 01:17:02.000

To clarify, Susan

01:17:02.000 --> 01:17:09.000

The first time. Very few people are saying this, but that is what they need to be taken as

01:17:09.000 --> 01:17:17.000

So they will be taken as comments that you are telling us. This is what you think should be included in the scope.

01:17:17.000 --> 01:17:26.000

The reason why I'm trying to clarify my language here is because someone saying that it should be included in the EAR does not mean that it will be.

01:17:26.000 --> 01:17:35.000

Because there's all sorts of law out there about what is and is not studied in the EIR and some comments are not part of what an EIR studies.

01:17:35.000 --> 01:17:36.000

I understand that.

01:17:36.000 --> 01:17:46.000

That said we will not ignore a comment because someone didn't use the phrase scoping when they gave us the comment.

01:17:46.000 --> 01:17:53.000

Thank you.

01:17:53.000 --> 01:17:54.000

I'm not… Oh. Go ahead.

01:17:54.000 --> 01:17:59.000

I've been waiting to have a question. Okay, it's a real simple one.

01:17:59.000 --> 01:18:07.000

On your scoping list, there's something called public services. What is that?

01:18:07.000 --> 01:18:13.000

That's stuff like that. Police protection.

01:18:13.000 --> 01:18:18.000

Buyer protection schools public facilities.

01:18:18.000 --> 01:18:20.000

Public service facilities, things like that.

01:18:20.000 --> 01:18:31.000

Okay. And then the other question I do have about the comments that are being offered tonight and you've received other comments at other meetings and you will be receiving comments.

01:18:31.000 --> 01:18:46.000

How public will those comments be made and will the actual commenter receive an answer to their comments Or do they have to go to the document and find that they've been addressed.

01:18:46.000 --> 01:19:04.000

Yeah, I can just give a give a quick overview of what the plan is. So we will receive all comments and what we will do is we will include essentially a table in the EIR that indicates where in the environmental impact report that comment has been considered.

01:19:04.000 --> 01:19:15.000

Essentially, once we publish that environmental impact report, that will be where individuals will be able to kind of see how their scoping comments were addressed.

01:19:15.000 --> 01:19:29.000

Okay. And then I just want to add something that Susan brought up about the one road one way into and out of the marina. Last weekend, I attended the Wonderful Bay Festival.

01:19:29.000 --> 01:19:44.000

On University Avenue, once I got past the freeway, it took me 25 minutes The traffic was horrible. It took me 25 minutes to reach what would have been the peer?

01:19:44.000 --> 01:19:51.000

Don't tell me how long it took me to get to his Lordship's parking But that was something else.

01:19:51.000 --> 01:20:02.000

So that's sort of a limitation when one sees the the lack of, well, what could happen with a tsunami when everyone's trying to rush out of there?

01:20:02.000 --> 01:20:08.000

That's all. Thank you. All the comments have been great, by the way.

01:20:08.000 --> 01:20:17.000

Thank you. So I am not seeing any other Hands up. I think we'll stay on.

01:20:17.000 --> 01:20:26.000

But we really appreciate everybody taking the time out of their day to To provide comments, we'll stay on to see if there's any other additional hands.

01:20:26.000 --> 01:20:31.000

Nice, I don't know if you want to say anything else, any concluding remarks.

01:20:31.000 --> 01:20:43.000

No, I think thanks everyone for taking time out of your evening to submit comments. Could you go back to the slide that has the email and mailing address? Let's go ahead and park that up there.

01:20:43.000 --> 01:20:48.000

So feel free to snap a photo of this or do a screen grab.

01:20:48.000 --> 01:21:14.000

We took, between all of us here, we took a lot of notes And we do have transcript. We do have a recording going so that we can check the transcript or check the meeting if we have any confusion about our notes, but we do really encourage you to write a written comment. That's the best way to be sure that we fully understand exactly what you're trying to communicate.

01:21:14.000 --> 01:21:21.000

Again, if you are unable to do that, that's fine. We will take all the comments that we receive verbally tonight will be part of the record.

01:21:21.000 --> 01:21:30.000

But we do encourage you to make a written comment just for clarity.

01:21:30.000 --> 01:21:31.000

We have one more from Kelly.

01:21:31.000 --> 01:21:39.000

And thanks everyone again for participating. I do see there's one hand One hand has been raised as we've been making our closing comments here so we can Take that comment and then conclude.

01:21:39.000 --> 01:21:53.000

Yes, I appreciate that you set this up. To allow the transcript, but I must say that I'm very disappointed that you did not allow attendance to save the transcript.

01:21:53.000 --> 01:22:09.000

So we made one step forward from what usually happens in the city, but I would certainly appreciate it that in any future Zoom meetings on the pier ferry that you allow the public to save the transcript.

01:22:09.000 --> 01:22:19.000

Thank you.

01:22:19.000 --> 01:22:26.000

Thank you. I hope everyone has a good rest of your evening. And this concludes this scoping meeting. Thank you very much.

01:22:26.000 --> 01:22:31.000

Thank you.

01:22:31.000 --> 01:22:37.000

Thank you.

01:22:37.000 --> 01:22:41.000

I'm going to close the uh i have to press the button here Okay, thank you.

01:22:41.000 --> 01:22:42.000

Thank you.

01:22:42.000 --> 01:22:44.000

Thank you.

01:22:44.000 --> 01:22:50.000

Okay, here we go. I'm going to go ahead. And the meeting now, thank you very much.

Appendix B

Air Quality and Greenhouse Gas Emissions Information

Assumptions and Calculations

Berkeley Water Transportation Pier Ferry Project
General Assumptions

CalEEMod Inputs that are not modeling defaults:

Project Location	County
	Alameda
Location	Seawall Drive and University Avenue
Climate Zone	5
Urbanization	Urban
Construction Year	2027
Operational Year (Buildout)	2028
Air District	BAAQMD
Air Basin	SFBAAB
Utility Company	

Construction Assumptions

Greenhouse Gas Pollutant Intensity Factors - 2028 Forecasted Factors

CO_2 (lb/MWh)	CH_4 (lb/MWh)	N_2O (lb/MWh)
203.983	0.033	0.004

Construction Data

Proposed Use	Units	Square Feet	Acres
Restrooms		140	0.003
Parking Lot	442	173,264	3.98
Repaved Roads[1]		400,000	9.18

Notes

[1] Based on Google Earth Estimates

Land Use[1]

Land Use	Subtype	Unit	Size	Acres	Total SF	Landscape
Recreational	Health Club	1000 sqft	0.140	0.003	140	-
Parking	Parking Lot	spaces	442	3.98	173,264	
Parking	Other Asphalt Area	1000 sqft	400.000	9.18	400,000	-
Total				**13.16**		

Notes

Berkeley Water Transportation Pier Ferry Project
General Assumptions

Construction Offroad Equipment - Demolition and Soil Movement Volumes

Construction Activity[1]	Start Date	End Date	Work Days
University Avenue Demolition	4/1/2027	4/28/2027	20
Seawall Drive Demolition	4/1/2027	5/12/2027	30
Parking Lot Demolition	4/1/2027	5/12/2027	30
Bay Trail Demolition	4/1/2027	5/12/2027	30
Plaza Demolition	4/1/2027	4/14/2027	10
Pier Demolition	4/1/2027	6/9/2027	50
University Avenue Grading	4/1/2027	4/14/2027	10
Seawall Drive Grading	4/1/2027	4/20/2027	14
Parking Lot Grading	4/1/2027	4/20/2027	14
Bay Trail Grading	4/1/2027	4/20/2027	14
Plaza Grading	4/1/2027	4/21/2027	15
Pier Grading	4/1/2027	4/21/2027	15

Dust from Material Movement

Phase	Material Imported (CY)	Material Exported (CY)
University Avenue Soil Movement	300	300
Seawall Drive Soil Movement	600	200
Parking Lot Soil Movement	9,700	9,000
Bay Trail Soil Movement	600	500
Plaza and Pier Entrance Soil Movement	1,000	0
Pier and Breaker Water Soil Movement	0	0
Total	**12,200**	**10,000**

	Frequency	PM10 % Reduction	PM2.5 % Reduction
Water Exposed Area	2	61%	61%

Demolition

	Asphalt Demolition (CY)	Concrete Demolition (CY)	Timber Demolition (CY)	Total Amount (tons)[1]
University Avenue	1,300	400	0	1,190
Seawall Drive	400	0	0	280
Parking Lot	3,800	100	0	2,730
Bay Trail	500	10	0	357
Plaza and Pier Entrance	200	10	0	147
Pier and Breaker Water	0	5,000	2,220	3,500
Total				**8,204**

	Frequency	PM10 % Reduction	PM2.5 % Reduction
Water Demolished Area	2	36%	36%

Onroad Fugitive Dust

Control Strategy	PM2.5 % Reduction	PM10 % Reduction
Water Unpaved Roads Twice Daily	55%	55%
Limit Vehicle Speeds on Unpaved Roads to 25 mph	44%	44%
Sweep Paved Roads Once per Month	9%	9%

Architectural Coatings Uses CalEEMod Defaults

The modeling that was conducted was done before a change in the project that removed a small watercraft launch (45 days of construction) from the Project and added shoreline repair (15 days of construction) to the Project. The modeling presented in this Appendix is conservative because less days will result in less overall project related construction emissions and emissions are likely to be lower than what is presented here.

Berkeley Water Transportation Pier Ferry Project
General Assumptions

For Concrete/Timber Demo – Debris will be barged to Pier 96 in SF. Lat/Long: 37.74342, -122.3710. Then they will be trucked to a landfill.

For Dredging – 400,000 CY will be barged to Alcatraz Disposal Site or Montezuma Site.

Parking lot

	Description	CY	CY + 20%	CY Rounded

	Option 1 Option 1 is intended to be an upper bound on the estimated maximum emissions in a given phase. It overlaps dredging, pile installation, utilities, and paving into the same phase.	Option 2 This options is a more likely construction schedule	Option 3 This option is intended to give the maximum duration of the expected construction schedule.

	Option 1 Option 1 is intended to be an upper bound on the estimated maximum emissions in a given phase. It overlaps dredging, pile installation, utilities, and paving into the same phase.	Option 2 This options is a more likely construction schedule	Option 3 This option is intended to give the maximum duration of the expected construction schedule.

	Option 1 Option 1 is intended to be an upper bound on the estimated maximum emissions in a given phase. It overlaps dredging, pile installation, utilities, and paving into the same phase.	Option 2 This options is a more likely construction schedule	Option 3 This option is intended to give the maximum duration of the expected construction schedule.

Berkeley Water Transportation Pier Ferry Project
Emissions associated with EV Charging Use

Cars

Estimated 2028 GHG Emissions Reductions to replace gasoline vehicles with Electric Vehicles

Project Electricity Emission Factor[1]	0.09	$MTCO_2e/MWh$	
Electric Vehicle Fuel Economy[2]	0.25	kWh/mile	
Gasoline CO_2e Emissions while Running[3]	1453	gr/mile	
Annual VMT Reduction per charging Station[4]	91,250	miles/charging station/year)	
Number of Chargers[5]	21.5	duel port charging stations (1/2 number of spaces)	
Annual VMT Reduction All Stations (based on Charge)	1,961,875	miles/year	

Conversion Factors:

2204.62	lb/MT	
1.00E-06	MT/gram	
0.001	MWh to KWh	
28.3	miles/gallon - gasoline	
203.983	lb/MWh	CO2

Increase in Electricity from Charging Stations

MT CO2e	# Stations	
45.83	21.5	
2.131628	per station	
21.5	2028	
21.5	2045	
0	stations per year	

Estimated Benefit from Installing Electric Vehicle Charging Stations.

GHG Emissions of Gasoline vehicles	2,850	$MTCO_2e/yr$
GHG Emisssions of Electric Vehicles	45	$MTCO_2e/yr$
Net Reduction in Emissions	2,805	$MTCO_2e/yr$
	490	MWh/yr
	490,468.75	kWh/year
	69,324	gallons/year

30 year Average

1,598	$MTCO_2e/yr$	17	years
392	$MTCO_2e/yr$	13	years
32258.75	MTCO2e	30	years
1075.292	MTCO2e/year		

MT CO2e	Stations	Year
45.83	21.5	2028
46.90	21.5	2029

1452.70		
48.42348		

Estimated 2045 GHG Emissions Reductions to replace gasoline vehicles with Electric Vehicles

Project Electricity Emission Factor[1]	0.00	$MTCO_2e/MWh$	
Electric Vehicle Fuel Economy[2]	0.25	kWh/mile	
Gasoline CO_2e Emissions while Running[3]	200	gr/mile	
Annual VMT Reduction per charging Station[4]	91,250	miles/charging station/year	
Number of Chargers[5]	21.5	duel port charging stations (1/2 number of spaces)	
Annual VMT Reduction All Stations (based on Charge)	1,961,875	miles/year	

Estimated Benefit from Installing Electric Vehicle Charging Stations.

GHG Emissions of Gasoline vehicles	392	$MTCO_2e/yr$
GHG Emisssions of Electric Vehicles	0	$MTCO_2e/yr$
Net Reduction in Emissions	392	$MTCO_2e/yr$
	490	MWh/yr
	490,468.75	kWh/year
	69,324	gallons/year

Emissions from Electrical use for charging Stations	45.83	$MTCO_2e/yr$	2028
Average Annual Emissions from Electrical usage 2028 - 2045	46.84	$MTCO_2e/yr$	
Average Annual Emissions from electricity usage over 30 years	48.42	$MTCO_2e/yr$	
Average Annual GHG Reduction between 2028 and 2045	1,552	$MTCO_2e/yr$	Includes reduction from Electrical Use
Average Annual GHG Reduction over 30 years operation	1,027	$MTCO_2e/yr$	Includes Reduction from Electrical Use
	30,806		

Notes:

[1] CO_2e intensity factor of 203.983 lbs/MWh from CalEEMod for 2028 PG&E forecasted

[2] National Renewable Energy Laboratory (NREL). 2018. California Plug-In Electric Vehicle Infrastructure Projections: 2017-2025 (Table C.1). Available at: https://www.nrel.gov/docs/fy18osti/70893.pdf.

[3] Obtained emission factor from CalEEMod, for 2028 and 2040

[4] Annual VMT reduction estimated based on an estimate of ten hours of charge time for a Level 2 charging station that charges at a rate of 25 driving range per hour.

[5] Number of charging stations based on Project Design

- Project would have 425-475 overall proposed parking spaces. Of which 20% (85-95) spaces would be V capabil and in addition another 10% (43-48) would have Chargers installed, for a total of 128 - 143 spaces with some EV infrastructure/charging ability in 2028. This analysis uses 43 spaces as a conservative estimate of emissions.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	7.10000	annual days of extreme heat
Extreme Precipitation	7.50000	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	—

Healthy Places Index Score for Project Location (b)	76.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Construction: Construction Phases	Uses one workday as a multiplier for construction activity duration provided by applicant. See Construction Duration by Phase worksheet or Project Description. Added Architectural Coating activity to account for emissions from painting
Construction: Off-Road Equipment	based on data provided by client
Construction: Architectural Coatings	based on land use data for restrooms and parking area
Operations: Vehicle Data	1,127 trips per day based on data provided by client. VMT of 8 miles based on Kittlson
Operations: Fleet Mix	Assumes that fleet mix will be mainly passenger vehicles and buses
Operations: Energy Use	All Electric project. Electric Ferry energy consumption based on a total of 4.4MW with 12 hours of operation and 365 days per year. See energy calculations in assumptions worksheet.

8.5. Operations

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00000	203.983	0.03300	0.00400

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	7.10000	annual days of extreme heat
Extreme Precipitation	7.50000	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	—
AQ-PM	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	—

Healthy Places Index Score for Project Location (b)	76.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Construction: Construction Phases	accounts for demolition and grading durations only
Construction: Off-Road Equipment	model considers only demolition and soil movement
Construction: Trips and VMT	only hauling trips

8.4. Construction

8.4.6. Trips and VMT

Phase Name	Trip Type	Model Parameter	Default Value	New Value
University Avenue Grading	Worker	One-Way Trips per Day	2.50000	0.00000

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%
Sweep paved roads once per month	9%	9%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00000	0.00000	210.000	70.0000	34,396.9

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Demolition	0.00000	0.00000	0.00000	—	0.00000
Site Preparation	—	—	0.00000	0.00000	0.00000
Grading	—	—	1.50000	0.00000	0.00000
Paving	0.00000	0.00000	0.00000	0.00000	13.1607

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%

5.7. Construction Paving

Phase Name	Land Use	Area Paved (acres)	% Asphalt
Paving	Health Club	0.00000	0%
Paving	Parking Lot	3.97800	100%
Paving	Other Asphalt Surfaces	9.18274	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00000	203.983	0.03300	0.00400

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	7.10000	annual days of extreme heat
Extreme Precipitation	7.50000	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	—
AQ-PM	—
AQ-DPM	—
Drinking Water	—
Lead Risk Housing	—

2016 Voting	47.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	—

Healthy Places Index Score for Project Location (b)	76.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Construction: Construction Phases	Uses one workday as a multiplier for construction activity duration provided by applicant. See Construction Duration by Phase worksheet or Project Description. Added Architectural Coating activity to account for emissions from painting
Construction: Off-Road Equipment	based on data provided by client
Construction: Architectural Coatings	based on land use data for restrooms and parking area

8.4. Construction

8.4.1. Construction Phases

Phase Type	Phase Name	Model Parameter	Default Value	New Value
Demolition	Demolition	End Date	4/29/2027	4/1/2027

Demolition	Demolition	Work Days per Phase	20.0000	1.000000
Site Preparation	Site Preparation	Start Date	4/30/2027	4/1/2027
Site Preparation	Site Preparation	End Date	5/14/2027	4/1/2027

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	7.10	annual days of extreme heat
Extreme Precipitation	7.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	—
AQ-PM	—
AQ-DPM	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	—
Healthy Places Index Score for Project Location (b)	76.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Uses one workday as a multiplier for construction activity duration provided by applicant. See Construction Duration by Phase worksheet or Project Description
Construction: Off-Road Equipment	based on data provided by client
Construction: Trips and VMT	concrete truck 13 times per month during Deck, Float, Gangway Construction
Construction: Architectural Coatings	based on land use data for restrooms and parking area

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Construction: Construction Phases	Uses one workday as a multiplier for construction activity duration provided by applicant. See Construction Duration by Phase worksheet or Project Description. Added Architectural Coating activity to account for emissions from painting
Construction: Off-Road Equipment	based on data provided by client
Construction: Architectural Coatings	based on land use data for restrooms and parking area
Operations: Vehicle Data	1,127 trips per day based on data provided by client. VMT of 25 miles based on Kittlson for current commuter traffic
Operations: Fleet Mix	Assumes that fleet mix will be mainly passenger vehicles and buses
Operations: Architectural Coatings	Vehicle Emissions Only
Operations: Landscape Equipment	Vehicle Emissions Only
Operations: Energy Use	Accounts for increased electrical use from implementation of EV charging Stations.

8.5. Operations

16-30	0.73	16-30	0.73

Source: OEHHA 2015

Dose = (Cair X DBR X A X EF X Constant 1)

Cair = concentration in air ($\mu g/m^3$)

DBR = daily breathing rate normalized to body weight (l/kg bod weight -day)

A = Inhalation adsorption factor (unitless)

EF = Exposure frequency (unitless), days/365 days

Constant 1 = micrograms to milligrams conversion, liters to cubic meters conversion

Cancer Risk = Dose X CPF x ASF x (ED/AT) X FAH

Dose = Daily inhalation dose (mg/kg-day)

CPF = Inhalation cancer potency factor (mg/kg-day^{-1})

ASF = Age sensitivity factor for a specified age group (unitless)

ED = Exposure duration (in years) for a specified age group

AT = Averaging time for lifetime cancer risk (years)

FAH = Fraction of time spent at home (unitless)

Risk per Million = Cancer Risk X Constant 2

Gasoline Dispensing Facility (GDF) Distance Multiplier Tool: This distance multiplier tool refines the screening values for cancer risk and chronic hazard index found in the District's Stationary Source Screening Analysis Tool for GDF's, to represent adjusted risk and hazard impacts that can be expected with farther distances from the source of emissions.

Gas Station

Distance (meters)	Distance (feet)	**Distance adjustment multiplier**	**Enter Risk or Hazard**	**Adjusted Risk or Hazard**

Diesel Internal Combustion (IC) Engine Distance Multiplier Tool: This distance multiplier tool refines t values for cancer risk and PM2.5 concentrations found in the District's Stationary Source Screening Anal permitted facilities which contain only diesel IC engines, to represent adjusted risk and hazard impacts t expected with farther distances from the source of emissions.

Diesel Backup Generator

Source: OEHHA 2015

Dose = (Cair X DBR X A X EF X Constant 1)

Cair = concentration in air ($\mu g/m^3$)

DBR = daily breathing rate normalized to body weight (l/kg bod weight -day)

A = Inhalation adsorption factor (unitless)

EF = Exposure frequency (unitless), days/365 days

Constant 1 = micrograms to milligrams conversion, liters to cubic meters conversion

Cancer Risk = Dose X CPF x ASF x (ED/AT) X FAH

Dose = Daily inhalation dose (mg/kg-day)

CPF = Inhalation cancer potency factor (mg/kg-day^{-1})

ASF = Age sensitivity factor for a specified age group (unitless)

ED = Exposure duration (in years) for a specified age group

AT = Averaging time for lifetime cancer risk (years)

FAH = Fraction of time spent at home (unitless)

Risk per Million = Cancer Risk X Constant 2
